TRACT A, MANOR OF BAILEY FARMS, FIRST PLAT

1. All construction to follow the City of Lee's Summit Design and Construction manual as adopted by Ordinance 5813.
2. All workshop and materials shall be subject to the inspection and approval of the Engineering Department of the City of Lee's Summit, Missouri.
3. Lineal foot measurements shown on the plans are horizontal measurements, not slope measurements. All payments shall be made on horizontal measurements.
4. No geological investigation has been performed on the site.
5. The utility locations shown on these plans are taken from utility company records, apparent field locations, and construction of the Bailey Farms public improvement plans. The Contractor shall verify the location and depth of all utilities prior to construction.
6. The Contractor shall adhere to the provisions of the Senate Bill Number 583, 78th General Assembly of the State of Missouri. The bill requires that any person or firm doing excavation on public right of way do so only after giving notice to, and obtaining information from, utility companies. State Law requires 48 hours advance notice. The Contractor may also utilize the following toll free phone number provided by "Missouri One Call System, Inc.": 1-800-DIG-RITE. This phone number is applicable anywhere within the State of Missouri. Prior to commencement of work, the Contractor shall notify all those companies which have facilities in the near vicinity of the construction to be performed.
7. Prior to ordering precast structures, shop drawing shall be submitted to the design engineer for approval.
8. The Contractor shall protect all major trees from damage. No tree shall be removed without permission of the owner, unless shown otherwise.
9. Clearing and grubbing operations and disposal of all debris therefrom shall be performed by the Contractor in strict accordance with all local codes and ordinances.
10. All waste material resulting from the project shall be disposed of off-site by the Contractor, or as directed by the owner.
11. All excavations shall be unclassified. No separate payment will be made for rock excavation.
12. The Contractor shall control the erosion and siltation during all phased of construction, and shall keep the streets clean of mud and debris.
13. All manholes, catch basins, utility valves and meter pits to be adjusted or rebuilt to grade as required.
14. Subgrade soil for all concrete structures, regardless of the type or location, shall be firm, dense and thoroughly compacted and consolidated, shall be free from mud and mud; and shall be sufficiently stable to remain firm and intact under the feet of the workmen or machinery engaged in subgrade surfacing, laying reinforcing steel, and depositing concrete thereon. In all cases where subsoil is mucky or works into mud or muck during such operations, a seal course of either concrete or rock shall be placed below subgrade to provide a firm base for working and for placing the floor slab.
15. The Contractor shall contact the City's Development Services Engineering Inspection to schedule a pre-construction meeting with an inspector prior land disturbance work at (816) 969-1200.
16. The Contractor shall contact the Right of Way Inspector at (816) 969-1800 prior to any land disturbance activities within the right of way. These activities may require a permit.
17. The Contractor shall provide and maintain all traffic handling measures necessary to ensure that the general public is protected at all times. Traffic control shall conform to the Manual on Uniform Traffic Control Devices (MUTCD-latest edition).
18. All sanitary sewer laterals shall have a trench check, consisting of flowable backfill, installed during construction. trench check shall extend to bottom of trench, to width of trench, to 12 inches above pipe, for a minimum length of 12 inches. trench check shall be located at least 5 feet from sanitary main.

1. It is recommended that a Geotechnical Engineering observe and document all earthwork activities.
2. Contours have been shown at 1-foot or 2-foot intervals, as indicated. Grading shall consist of completing the earthwork required to bring the physical ground elevations of the existing site to the finished grade (or sub-grade) elevations provided on the plans as spot grades, contours or others means as indicated on the plans.
3. The existing site topography depicted on the plans by contouring has been established by a field survey performed by R.L. Buford and Associates dated 01-06-2017. The contour elevations provided may not be exact ground elevations, but rather interpretations of such. Accuracy shall be considered to be such that not more than 10 percent of spot elevation checks shall be in error by more than one-half the contour interval provided, as defined by the National Map Accuracy Standards. Any quantities provided for earthwork volumes are established using this topography contour accuracy, and therefore the inherent accuracy of any earthwork quantity is assumed from the topography accuracy.
4. Proposed contours are to approximate finished grade.
5. Unless otherwise noted, payment for earthwork shall include backfilling of the curb and gutter, sidewalk and further manipulation of utility trench spoils. The site shall be left in a movable condition and positive drainage maintained throughout.
6. Unless otherwise noted, all earthwork is considered Unclassified. No additional compensation will be provided for rock or shale excavation, unless specifically stated otherwise.
7. Prior to earthwork activities, pre-disturbance erosion and sediment control devices shall be in place per the Storm Water Pollution Prevention Plan prepared for Erosion and Sediment Control Plan prepared for this site.
8. All topsoil shall be stripped from all areas to be graded and stockpiled adjacent to the site at an area specified by the project owner or his appointed representative. Vegetation, trash, trees, brush, tree roots and limbs, rock fragments greater than 6-inches and other deleterious materials shall be removed and properly disposed of offsite or as directed by the owner or his appointed representative.
9. Unless otherwise specified in the Geotechnical Report, all fills shall be placed in maximum 6-inch lifts and compacted to 95-percent of maximum density as defined using a standard proctor test (AASHTO T99/ASTM 698).
10. Subgrade for pavements shall be pro-rolled prior to paving operations utilizing a fully loaded tandem axle dump truck. All areas exhibiting excessive pumping and heaving shall be removed, filled and compacted with suitable materials and retested until acceptable results are achieved and final approval has been obtained from the Geotechnical Engineer.
11. Subgrade for building pad shall include a minimum of 18-inches of Low Volume Change (LVC) material, or as identified in the site specific Geotechnical Report.
12. Fill materials shall be per Geotechnical Report and shall not include organic matter, debris or topsoil. All fills placed on slopes greater than 6:1 shall be benching.
13. The Contractor shall be responsible for redistributing the topsoil over proposed turf and landscaped areas to a minimum depth of 6-inches below final grade.
14. All areas shall be graded for positive drainage. Unless noted otherwise the following grades shall apply:
 - a. Turf Areas – 2.5% Minimum, 4H:1V Maximum
 - b. Paved Areas – 1.2% Minimum, 5% Maximum
15. A.D.A. parking stalls shall not be sloped greater than 2% in any direction and constructed per A.D.A. requirements.
16. All disturbed areas shall be fertilized, seeded and mulched immediately after earthwork activities have ceased. Seeding shall be per the Erosion and Sediment Control Plan and/or Landscape Plan. If not specified seeding shall be per APWA Section 2400, latest edition. Unless otherwise noted, seeding shall be subsidiary to the contract price for earthwork and grading activities.
17. All disturbed areas in the right-of-way shall be sodded.
18. Underdrains are recommended for all paved areas adjacent to irrigated turf and landscaped beds.
19. Contractor shall adhere to the reporting requirements outlined in the Storm Water Pollution Prevention Plan (SWPPP) prepared for this project. Erosion and Sediment control devices shall be properly maintained and kept clean of silt and debris and in good working order. Additional erosion and sediment control measures shall be installed as required.

1. Existing utilities have been shown to the greatest extent possible based upon information provided to the Engineer. The Contractor is responsible for contacting the respective utility companies and field locating utilities prior to construction and identifying any potential conflicts. All conflicts shall immediately be brought to the attention of the Engineer.
2. The Contractor shall be responsible for coordinating any required utility relocations. utilities damaged through the negligence of the Contractor shall be repaired at the Contractor's expense.
3. Contractor shall verify flow lines and structures prior to construction, and shall notify Engineer of any discrepancies. provide shop drawings for all precast and manufactured utility structures for review by the Engineer prior to construction of the structures.
4. Utility separation: Waterlines shall have a minimum of 10 feet horizontal and 2 feet vertical separation from all sanitary and storm sewer lines. If minimum separations can not be obtained, concrete encasement of the sanitary or storm sewer line shall be required 10 feet in each direction of the conflict.
5. Payment for trenching, backfilling, pipe embedment, flowable fill, backfill materials, clean up, seeding, sodding and any other items necessary for the construction of the utility line shall be included in the contract price for the utility installation.
6. The Contractor shall be responsible for obtaining all necessary permits and any other necessary utility easements 48-hours in advance for the inspection of any proposed utility main extension or service line or service connection to any existing main.
7. Trench spoils shall be neatly placed onsite adjacent to the trench, and compacted to prevent saturation and excess sediment runoff. Unsuitable materials, excess rock and shale, asphalt, concrete, trees, brush etc. shall be properly disposed of offsite. Materials may be wasted onsite at the direction of the owner or his appointed representative.

GRAVEL FILTER FOR STORM SEWER STRUCTURE

DISTURBED AREA = 2.94 A.C.

SITE SPECIFIC NOTES:

1.

The Contractor is responsible for verifying all existing utility locations prior to excavation.
2.

There are no wetlands, natural or artificial water storage detention areas in the project area.
3.

No part of the project lies within the 100 year flood plain per FEMA Flood Insurance rate map number 29095C0414G dated January 20, 2017.
4.

All erosion and sedimentation control measures shall be implemented according to the BMP staging chart.
5.

Additional erosion control may be required by the City Engineer at any time existing measures are found to be ineffective or problematic areas are noted in the field.
6.

Stabilization of disturbed areas must, at a minimum, be initiated immediately whenever any clearing, grading, excavating, or other

soil disturbing activities have permanently ceased on any portion of the site, or temporarily ceased on any portion of the site and will not resume for a period exceeding 14 calendar days. The disturbed areas shall be protected from erosion by stabilizing the area with mulch or other similarly effective soil stabilizing BMPs. Initial stabilization activities must be completed within 14 days after soil disturbing activities cease.

7.

All perimeter silt fence, and construction entrance shall be installed before grading operations begin.
8.

Silt fence that is placed before grading begins shall be maintained by the grading contractor.
9.

Areas within public right-of-way shall be sodded immediately after construction is complete.

EROSION CONTROL PLAN

SHEET
C4.0

GENERAL UTILITY NOTES:

- Existing utilities have been shown to the greatest extent possible based upon information provided to the Engineer. The Contractor is responsible for contacting the respective utility companies and field locating utilities prior to construction and identifying any potential conflicts. All conflicts shall immediately be brought to the attention of the Engineer. The Contractor shall be responsible for coordinating all utility extensions to the site and buildings including submitting service requests. Schlager & Associates is not responsible for utility coordination.
- The Contractor shall be responsible for coordinating any required utility relocations. Utilities damaged through the negligence of the Contractor shall be repaired at the Contractor's expense.
- Contractor shall verify flow-lines and structure tops prior to construction, and shall notify Engineer of any discrepancies. Provide shop drawings for all precast and manufactured utility structures for review by the Engineer prior to construction of the structures.
- Utility separation: waterlines shall have a minimum of 10 feet horizontal and 2 feet vertical separation from all sanitary and storm sewer lines. If minimum separations can not be obtained, concrete encasement of the sanitary or storm sewer line shall be required 10 feet in each direction of the conflict.
- Payment for trenching, backfilling, pipe embedment, flowable fill, backfill materials, clean up, seeding, sodding and any other items necessary for the construction of the utility line shall be included in the contract price for the utility installation.
- The Contractor shall be responsible for contacting respective utility companies 48-hours in advance for the inspection of any proposed utility main extension or service line or service connection to any existing main.
- Trench spoils shall be neatly placed onsite adjacent to the trench, and compacted to prevent saturation and excess sediment runoff. Unsuitable materials, excess rock and shale, asphalt, concrete, trees, brush etc. shall be properly disposed of offsite. Materials may be wasted onsite at the direction of the owner or his appointed representative.
- All construction to follow the City of Lee's Summit design and construction manual as adopted by ordinance 5813.
- All workmanship and materials shall be subject to the inspection and approval of the engineering department of the city of Lee's Summit, Missouri.
- lineal foot measurements shown on the plans are horizontal measurements, not slope measurements. All payments shall be made on horizontal measurements.
- no geological investigation has been performed on the site.
- the utility locations shown on these plans are taken from utility company records and apparent field locations. The contractor shall verify the location and depth of all utilities prior to construction.
- the contractor shall adhere to the provisions of the senate bill number 583, 78th general assembly of the state of Missouri. The bill requires that any person or firm doing excavation on public right of way do so only after giving notice to, and obtaining information from, utility companies. State law requires 48 hours advance notice. The contractor may also utilize the following toll free phone number provided by "Missouri one call system, Inc.": 1-800-dig-rite. This phone number is applicable anywhere within the state of Missouri. Prior to commencement of work, the contractor shall notify all those companies which have facilities in the near vicinity of the construction to be performed.
- prior to ordering precast structures, shop drawing shall be submitted to the design engineer for approval.
- the contractor shall protect all major trees from damage. No tree shall be removed without permission of the owner, unless shown otherwise.
- clearing and grubbing operations and disposal of all debris therefrom shall be performed by the contractor in strict accordance with all local codes and ordinances.
- all waste material resulting from the project shall be disposed of off-site by the contractor, or as directed by the owner at no additional cost.
- all excavations shall be unclassified. No separate payment will be made for rock excavation.
- the contractor shall control the erosion and siltation during all phases of construction, and shall keep the streets clean of mud and debris.
- the contractor shall contact public works inspections at: 816-969-1800 to obtain a public works construction permit. A minimum 48 hour notice shall be given prior to permit issuance.
- the contractor shall contact the city's erosion control specialist at: 816-969-1800 prior to any land disturbance.
- the contractor shall contact the right of way inspector at 816-969-1800 prior to any land disturbance activities within the right of way. These activities may require a permit.
- the contractor shall provide and maintain all traffic handling measures necessary to ensure that the general public is protected at all times. Traffic control shall conform to the manual on uniform traffic control devices (mutcd-latest edition). All sanitary sewer laterals shall have a trench check, consisting of flowable backfill, installed during construction. Trench check shall extend to bottom of trench, to width of trench, to 12 inches above pipe, for a minimum length of 12 inches. Trench check shall be located at least 5 feet from sanitary main.
- all backfill material shall be placed in maximum 6-inch lifts and compacted to 95-percent of maximum density as defined using a standard proctor test (AASHTO T99/ASTM 698).
- backfill materials shall not include organic matter, debris or topsoil.
- all wyes are stationed using main line stations.
- m.s.f.e denotes minimum sewerable floor elevation.
- all service lines are to be 90° to the main unless otherwise noted.
- ALL SANITARY SEWER MANHOLES ARE 4' DIAMETER UNLESS OTHERWISE NOTED.

STORM SEWER
PLAN

SHEET
C6.0

NOTES:

- ALL PIPE SYSTEMS SHALL BE INSTALLED IN ACCORDANCE WITH ASTM D2321, "STANDARD PRACTICE FOR UNDERGROUND INSTALLATION OF THERMOPLASTIC PIPE FOR SEWERS AND OTHER GRAVITY FLOW APPLICATIONS", LATEST EDITION
- MEASURES SHOULD BE TAKEN TO PREVENT MIGRATION OF NATIVE FINES INTO BACKFILL MATERIAL, WHEN REQUIRED.
- FOUNDATION:** WHERE THE TRENCH BOTTOM IS UNSTABLE, THE CONTRACTOR SHALL EXCAVATE TO A DEPTH REQUIRED BY THE ENGINEER AND REPLACE WITH SUITABLE MATERIAL AS SPECIFIED BY THE ENGINEER. AS AN ALTERNATIVE AND AT THE DISCRETION OF THE DESIGN ENGINEER, THE TRENCH BOTTOM MAY BE STABILIZED USING A GEOTEXTILE MATERIAL.
- BEDDING:** SUITABLE MATERIAL SHALL BE CLASS I, II OR III. THE CONTRACTOR SHALL PROVIDE DOCUMENTATION FOR MATERIAL SPECIFICATION TO ENGINEER. UNLESS OTHERWISE NOTED BY THE ENGINEER, MINIMUM BEDDING THICKNESS SHALL BE 4" (100mm) FOR 4"-24" (100mm-600mm); 6" (150mm) FOR 30"-60" (750mm-900mm).
- INITIAL BACKFILL:** SUITABLE MATERIAL SHALL BE CLASS I, II OR III IN THE PIPE ZONE EXTENDING NOT LESS THAN 6" ABOVE CROWN OF PIPE. THE CONTRACTOR SHALL PROVIDE DOCUMENTATION FOR MATERIAL SPECIFICATION TO ENGINEER. MATERIAL SHALL BE INSTALLED AS REQUIRED IN ASTM D2321, LATEST EDITION.
- MINIMUM COVER:** MINIMUM COVER, H, IN NON-TRAFFIC APPLICATIONS (GRASS OR LANDSCAPE AREAS) IS 12" FROM THE TOP OF PIPE TO GROUND SURFACE. ADDITIONAL COVER MAY BE REQUIRED TO PREVENT FLOATON. FOR TRAFFIC APPLICATIONS, MINIMUM COVER, H, IS 12" UP TO 48" DIAMETER PIPE AND 24" OF COVER FOR 54"-60" DIAMETER PIPE, MEASURED FROM TOP OF PIPE TO BOTTOM OF FLEXIBLE PAVEMENT OR TO TOP OF RIGID PAVEMENT.
