

file**BUILDING DEMOLITION
SYSTEM DISPOSITION**194 NW Oldham Pkwy - Waids Rest

Upon completion of demolition work described in City of Lee's Summit Permit # PRDEM 20130574 please complete this form, providing information to the best of your ability regarding the various structures and systems demolished, removed or deactivated; then return to John Borns, Building Inspector.

Structure... Briefly describe the structure(s) demolished and the manner and extent to which removal was performed. Include a description of the removal of foundation/substructure elements.

Old Waids restaurant was a masonry and wood framed structure. The building was removed using tracked equipment (excavator) with resultant debris disposed of in proper landfills. The foundations/footings were removed in their entirety and hauled off site for proper disposal.

Sanitary sewer service... Describe the measures taken to deactivate the service, including related contact with City departments.

City water dept. representative came to site and located water main. The service line pit at the Old Waids was shut off using nearest valve in mall parking lot. Service line was cut, capped & inspected. The same tap and service line will be utilized by GC for new restaurant.

Water service... Describe the measures taken to deactivate the service, including related contact with City departments.

Sanitary sewer service line was located, disconnected from Old Waids restaurant and properly plugged and inspected. The same service line will be utilized by the GC for new restaurant.

Natural gas service... Describe the measures taken to deactivate the service, including related contact with the gas service provider.

See Attached

Electrical service... Describe the measures taken to deactivate the service, including related contact with the electrical service provider.

RE: old Waids building in Lee's Summit

Kent,

We have been in contact with the planner from KCPL, were told power was disconnected. We then went down and confirmed it with a volt meter, and further we cut a section of the incoming service conduit and wire out to ensure that there is no power to the building. It is safe for anyone to go in and perform work on the electrical without fear of electrical shock.

Thank you,
Adam Morse
