

August 15th, 2018

To Whom it may Concern:

We, SGS Towers, will be performing the inspection of modification work managed by Brian Teasdale of Tower Management, Repair, and Landscape Solutions. The modification is taking place at 111 SW Hook Road, Lees Summit, MO 64082.

We have climbed and inspected over 6,000 cell towers throughout the country on various modification projects. Our field crews perform each inspection with an emphasis on accuracy while maintaining a high standard of safety. Any potential structural discrepancies noted during an inspection will either be approved by the project's Engineer of Record, or will be fixed by the contractor performing the work before a passing Modification Inspection Report is released.

As the lead engineer of SGS Towers, I review and seal by every Modification Inspection Report that we send out. I have my Professional Engineering Seal for the state of Missouri.

Thank you very much,

Nick Schmitt
VP of Engineering Services
