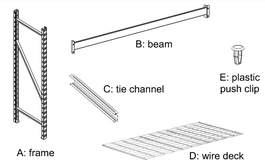
C: tie channel	12	ER-V4-TB
D: wire deck	4	RWD2472SF
E: plastic push clip	16	BBC.118B

Components



General Instructions

Assembly of this unit is done by fitting the brackets of the beams into the slots of the post frames.

A rubber mallet should be used on the ledge of the beams to properly seat the beam brackets. If a hammer is used care should be taken to protect the beam surface to avoid damage by using a protective cloth or block of wood.

The stepped surface of the beam ledge is the top, and should face upwards. This is the surface that the wire deck will rest on.

A bracket should engage and fit firmly into the tapered slot of the post frame. This engagement is a tight swaged fit and will apply resistance as it fully engages. A visual inspection should be made to show that the bracket is properly engaged in the slot.

After assembly re-check each beam for proper engagement.

Safety Instructions

This unit should be placed on a level surface. Failure to do so can result in poor product performance or create a possible safety hazard.

This unit should be securely anchored to a wall or floor with suitable fasteners, which are not included.

Do not use this unit for anything other than the manufacture's intended purpose.

DO NOT STAND ON ANY PART OF THE UNIT, OR USE IT AS A LADDER.

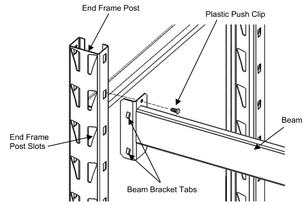
Use care when working with metal parts. Wear gloves for protection.

Evenly distribute the weight on each level and always keep the heavier loads on the bottom.

Assembly Instructions

- Attach the beams to the welded end frame posts (see figure 1) starting at the bottom level by using both end frames to establish the left and the right sides of the units.
- After a beam has been placed in both end frame post slots, tap the beam down at both ends with a rubber mallet to help drive the beam bracket tabs into the slots to secure the beam. Continue assembling each level from bottom to top level (front and back).
- If the beam bracket tabs become bent due to mishandling, it may be necessary to adjust the tabs back to their proper form.
- Place a plastic push clip into the hole of the beam end bracket, then tap the plastic clip with a mallet to drive it into the square hole of the end frame post to secure the beam to the end frame (see figure 1).

Figure 1



- The completed unit should have four (4) levels evenly spaced for maximum stability.
- Although the beams are adjustable in height, it's recommended to evenly space them so that the stability of the unit is not compromised.
- Install (3) tie channels in each level by inserting the tab located on both ends of the tie channel into the slot holes located along the inside bottom edge of the beams (see figure 2).
- Insert wire deck on each level (figure 3).
- Assembly is now complete

Figure 2

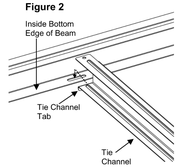


Figure 3

- Husky Welded Storage Rack is engineered to offer maximum flexibility as well as ease and quickness of assembly. The rack units can stand individually, or for greater stability, be joined together using the common post.
- Individual beams can be adjusted without disturbing the beams in adjoining units.
- These instructions should be followed exactly. All parts supplied must be used as shown. Any alteration or deviation from this instruction sheet can result in unit failure.
- After the unit is assembled, it must be placed on a level surface for safety, and optimal product performance.

Assembly

Step 1: Post Assembly

i. The top post section has a plastic endcap on one end and the bottom post has a foot leveler attached. Threaded post jointers are pre-installed for your convenience. Screw the posts (1 long & short) tightly together. (See Diagram #1)

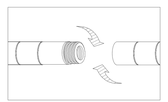

Diagram #1

Step 2: Bottom Shelf Assembly

i. Locate the desired position of the bottom shelf.
ii. Insert four plastic tapered sleeves into the appropriate post groove, one in each post. Ensure tapered end is up. See arrow on lock. (See Diagram #2)
iii. Place shelf on its side and slide each post with tapered sleeves through the bottom of the shelf until snug. (See Diagram #3)
iv. After all posts are in place, position the unit in the upright position.
v. Push down on each corner of the shelf, ensuring that the shelf is in the fully locked position.

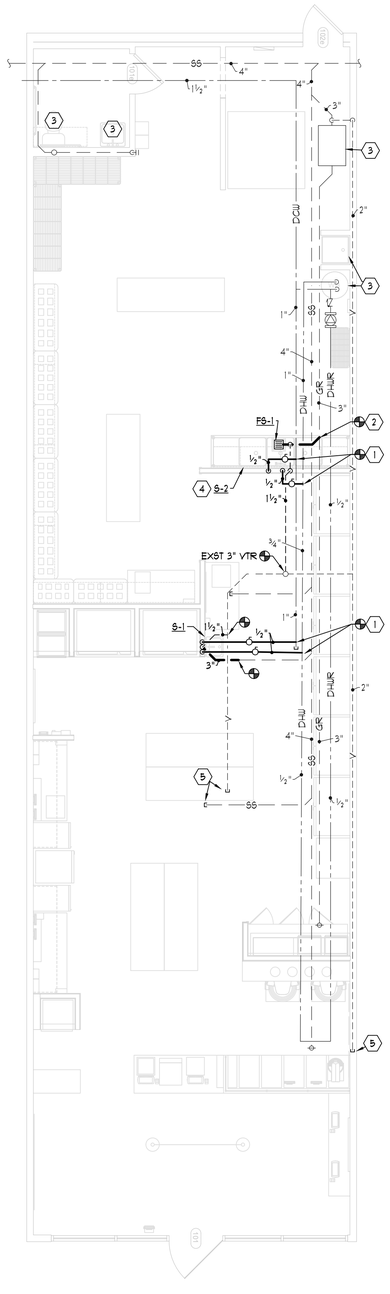
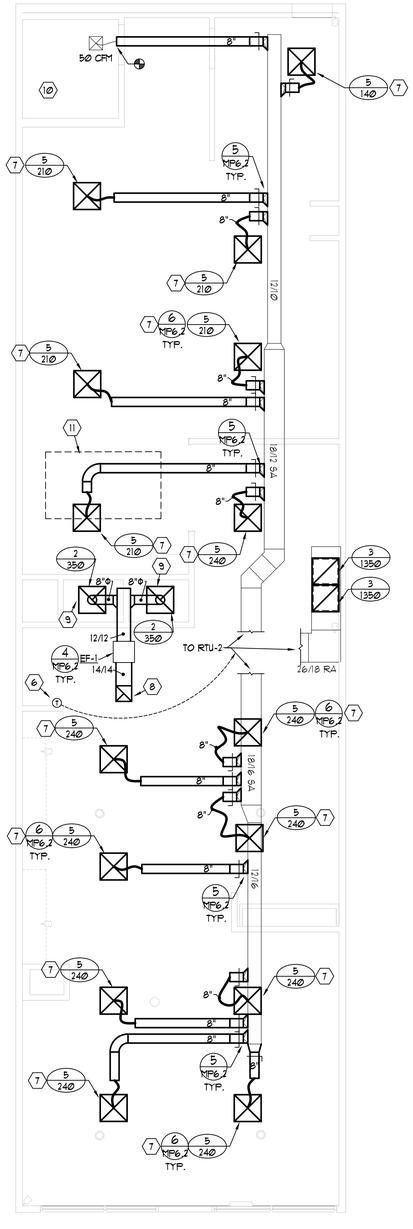
MP0.2



1 MP1.1 **PLUMBING FLOOR PLAN**

SCALE: 1/4" = 1' - Ø"



2 MP1.1 **MECHANICAL CEILING PLAN**

SCALE: 1/4" = 1' - Ø"

MECHANICAL/PLUMBING KEYED NOTES:

1. CONNECT INTO CLOSEST EXISTING DOMESTIC COLD OR HOT WATER LINE AS LABELED. CONTRACTOR TO FIELD VERIFY EXACT LOCATION AND SIZE BEFORE CONNECTING.
2. CONNECT NEW SANITARY SEWER/GREASE LINE INTO CLOSEST EXISTING SANITARY SEWER OR GREASE AS SHOWN. FIELD VERIFY EXACT LOCATION, SIZE, AND DIRECTION OF FLOW BEFORE CONNECTING.
3. EXISTING PLUMBING FIXTURE TO REMAIN. RECONNECT ALL NECESSARY PIPING TO THEIR CORRECT LINES.
4. ROUTE WASTE LINE FROM 3-COMPARTMENT SINK TO FLOOR SINK AND TERMINATE WITH 1" AIR GAP.
5. CAP ALL UNECESSARY/ABANDONDED PLUMBING LINES.
6. PROVIDE/INSTALL NEST 7-DAY PROGRAMMABLE THERMOSTAT AT 48" AFF. CONFIRM FINAL LOCATION WITH OWNER'S REPRESENTATIVE.
7. INSPECT EXISTING MECHANICAL SYSTEM/DUCTWORK. IF ACCEPTABLE KEEP, AND REPLACE DIFFUSERS WITH THOSE SPECIFIED. BALANCE ACCORDINGLY AND CONNECT TO EXISTING SUPPLY/RETURN DUCTWORK WHERE NECESSARY USING HIGH EFFICIENCY TAKEOFFS FOR ALL CONNECTIONS.
8. RISE EXHAUST DUCT UP THROUGH ROOF AND TERMINATE WITH BACKDRAFT DAMPER AND OWNER APPROVED TERMINATION. KEEP EXHAUST TERMINATION 3' AWAY FROM ANY OPERABLE BUILDING OPENING AND 10' AWAY FROM MECHANICAL FRESH AIR INTAKES.
9. THE OVENS IN THIS PROJECT ARE LIGHT DUTY ELECTRIC COOKING APPLIANCES AND DON'T PRODUCE GREASE OR SMOKE AS A RESULT OF THE COOKING PROCESS, THEREFORE THE OVENS DO NOT REQUIRE A TYPE I HOOD. PER 2015 IMC 508.1 TYPE II IS NOT REQUIRED BECAUSE THE HEAT AND MOISTURE LOADS HAVE BEEN INCORPORATED INTO THE HVAC DESIGN. THE KITCHEN AREA HAS AN EXHAUST FAN THAT HAS BEEN SIZED TO Ø.7 CFM/SF AND THE MAKE UP AIR IS VIA OUTSIDE AIR INTAKE ON RTU.
10. CONTRACTOR IS TO VERIFY THAT RESTROOM HAS EXISTING EXHAUST FAN FOR VENTILATION. IF RESTROOM DOES NOT HAVE EXISTING EXHAUST CONTRACTOR IS TO PROVIDE/INSTALL A PANASONIC FV-Ø5-11VKSI EXHAUST FAN, BALANCE TO 80 CFM AND PROVIDE 8" ROUND DUCT VENTED TO ROOF WITH BACKDRAFT DAMPER AND OWNER APPROVED TERMINATION.
11. RTU-1 (12.5 TON LENNOX GCSI5-150-270-1Y) IS TO BE ABANDONED. KEEP DUCT DROPS IN CASE OF FUTURE NEEDS.

GENERAL NOTES:

1. ALL EXHAUST DUCTWORK IS TO BE WRAPPED WITH INSULATION MIN. 10' FROM THE EXHAUST FANS FOR SOUND ATTENUATION.
2. CONTRACTOR TO PROVIDE / INSTALL ALL DUCTWORK AS HIGH UP AS POSSIBLE. COORDINATE ALL DUCTWORK WITH ARCHITECTURAL CEILING HEIGHTS. CONTRACTOR TO OFFSET DUCTWORK AS REQUIRED AND ROUTE THROUGH JOISTS AS REQUIRED. ALL OFFSETS SHOULD NOT EXCEED A 45° ANGLE.
3. CONTRACTOR IS TO PROVIDE / INSTALL ALL DUCTWORK WITH RADIUS ELBOWS WHERE EVER POSSIBLE. IF A 90° ELBOW MUST BE USED, CONTRACTOR IS TO INSTALL LONG RADIUS TURNING VANES IN ELBOWS.
4. CONTRACTOR IS TO FIELD COORDINATE ALL DUCTWORK AND HEIGHTS WITH ARCHITECTURAL CEILING PLANS.
5. All RTU's, MAU's, and CRU's ARE TO HAVE A FACTORY INSTALLED & WIRED WATER-LEVEL DETECTION & MONITORING DEVICE INSIDE THE PRIMARY DRAIN THAT WILL SHUT OFF THE EQUIPMENT IN THE EVENT THE PRIMARY DRAIN LINE IS BLOCKED.
6. WATER, SEWER, AND VENT LINES SHALL NOT BE ROUTED IN DEMISING WALLS. A PLUMBING WALL SHALL BE REQUIRED WHERE THESE LINES ARE SHOWN IN DEMISING WALLS.

DIVISION 15 - MECHANICAL

SECTION 15000
MECHANICAL GENERAL PROVISIONS

A. GENERAL CONDITIONS

1. DRAWINGS AND GENERAL PROVISIONS OF CONTRACT, INCLUDING GENERAL AND SUPPLEMENTARY CONDITIONS AND ALL OTHER SPECIFICATION SECTIONS ARE A PART OF THIS CONTRACT AND APPLY TO THIS AND THE OTHER SECTIONS OF DIVISION 15.

2. THE CONTRACTOR FOR THIS WORK IS REQUIRED TO READ THE ENTIRE SPECIFICATIONS AND REVIEW DRAWINGS FOR ALL OTHER TRADES.

3. THE CONTRACTOR IS RESPONSIBLE FOR PROVIDING HIS SUBCONTRACTORS WITH A FULL SET OF BID SET DOCUMENTS (INCLUDING SPECIFICATIONS) AND THE COORDINATION OF HIS WORK AND INSPECTIONS AND THE WORK AND INSPECTIONS OF HIS SUBCONTRACTORS WITH ALL OTHER TRADES ON SITE CONFORMING TO THE GENERAL CONTRACTOR'S TIME SCHEDULE.

4. THE CONTRACTOR SHALL VISIT THE SITE PRIOR TO SUBMITTING HIS BID TO DETERMINE CONDITIONS AFFECTING THE WORK. BIDS SHALL SERVE AS EVIDENCE REQUIRED TO MEET THE INTENT OF THE DRAWINGS AND SPECIFICATIONS. FAILURE TO VISIT THE SITE DOES NOT RELIEVE THE CONTRACTOR OF RESPONSIBILITY IN PERFORMANCE OF WORK.

5. WHEN USED, THE TERM "PROVIDED BY CONTRACTOR" SHALL BE INTERPRETED AS MEANING "FURNISHED AND INSTALLED" WITH THE EXCEPTION WHERE ITEMS ARE "PROVIDED BY TENANT" WHICH MEANS "FURNISHED ONLY" (INSTALLED BY CONTRACTOR) EXCEPT AS SPECIFICALLY NOTED OTHERWISE.

B. GENERAL REQUIREMENTS

1. THE CONTRACTOR SHALL PROVIDE ALL LABOR MATERIAL, EQUIPMENT, SERVICES, TOOLS, TRANSPORTATION, INCIDENTALS AND DETAILS NECESSARY TO PROVIDE A COMPLETE AND FULLY FUNCTIONAL MECHANICAL SYSTEM AS SHOWN ON THE DRAWINGS, CALLED FOR THE SPECIFICATIONS, AND AS REQUIRED BY JOB CONDITIONS. ALL WORK NOT SPECIFICALLY NOTED AS BEING BY THE LANDLORD SHALL BE PROVIDED BY THE MECHANICAL CONTRACTOR. CLOSELY COORDINATE THE ENTIRE INSTALLATION WITH THE LANDLORD, AS REQUIRED. FIELD VERIFY THE EXACT TYPE, SIZE AND LOCATION, ETC. OF EXISTING PIPE AND DUCTS IN THE TENANT SPACE PRIOR TO BID.

2. THE DRAWINGS AND SPECIFICATIONS ARE INTENDED TO SUPPLEMENT EACH OTHER AND ANY MATERIAL OR LABOR CALLED FOR IN ONE SHALL BE PROVIDED EVEN THOUGH NOT SPECIFICALLY MENTIONED IN BOTH. ANY MATERIAL OR LABOR WHICH IS NEITHER SHOWN ON THE DRAWINGS NOR CALLED FOR IN THE SPECIFICATIONS, BUT WHICH IS OBVIOUSLY NECESSARY TO COMPLETE THE WORK, AND WHICH IS USUALLY INCLUDED IN WORK OF SIMILAR CHARACTER, SHALL BE PROVIDED AS PART OF CONTRACT.

3. WHERE THE DRAWINGS OR SPECIFICATIONS CALL FOR ITEMS WHICH EXCEED CODES OR THE LANDLORD'S TENANT CRITERIA, THE CONTRACTOR IS STILL RESPONSIBLE FOR PROVIDING THE SYSTEM AS DESIGNED AND DESCRIBED ON THESE DRAWINGS, UNLESS SPECIFICALLY NOTED OTHERWISE.

4. ALL MECHANICAL WORK SHALL BE INSTALLED SO AS TO BE READILY ACCESSIBLE FOR OPERATING, SERVICING, MAINTAINING, AND REPAIRING. THE CONTRACTOR IS RESPONSIBLE FOR PROVIDING SUFFICIENT ACCESS TO ALL EQUIPMENT FOR SERVICE.

5. THE CONTRACTOR SHALL DO ALL CUTTING, CORE DRILLING, CHASING OR CHANNELING AND PATCHING REQUIRED FOR ANY WORK UNDER THIS DIVISION. CUTTING SHALL HAVE PRIOR APPROVAL BY THE TENANT'S CONSTRUCTION MANAGER AND THE LANDLORD. PATCHING SHALL MATCH , FINISH OF SURROUNDING AREA.

C. CODES

1. ALL WORK SHALL BE PERFORMED IN A NEAT PROFESSIONAL MANNER USING GOOD ENGINEERING PRACTICES. ALL WORK SHALL CONFORM TO THE LANDLORD'S ORDINANCES. SAFETY AND HEALTH CODES, NFPA CODES, ENERGY CODES, AND ALL OTHER APPLICABLE CODES AND REQUIREMENTS. THE CONTRACTOR SHALL INQUIRE INTO AND COMPLY WITH ALL APPLICABLE CODES, ORDINANCES, AND REGULATIONS. AFTER CONTRACT IS ISSUED, NO ADDITIONAL COST DUE TO CODE ISSUES SHALL BE REIMBURSED BY THE TENANT TO THE CONTRACTOR.

D. LICENSES, PERMITS, INSPECTIONS & FEES

1. THE CONTRACTOR SHALL OBTAIN AND PAY FOR ALL LICENSES, PERMITS, INSPECTIONS, AND FEES REQUIRED OR RELATED TO HIS WORK.

2. FURNISH TO THE TENANT'S CONSTRUCTION MANAGER ALL CERTIFICATES OF INSPECTION AND FINAL INSPECTION APPROVAL AT SUBSTANTIAL COMPLETION DATE OF PROJECT.

E. DRAWINGS

1. DRAWINGS (PLANS, SPECIFICATIONS, AND DETAILS) ARE DIAGRAMMATIC AND INDICATE THE GENERAL LOCATION AND INTENT OF THE MECHANICAL SYSTEMS. BECAUSE OF THE SMALL SCALE OF THE DRAWINGS, IT IS NOT POSSIBLE TO INDICATE ALL DUCT AND PIPING OFFSETS, FITTINGS AND ACCESSORIES THAT MAY BE REQUIRED.

2. THE LAYOUT SHOWN ON THE DRAWINGS IS BASED ON A PARTICULAR MAKE OF EQUIPMENT. IF ANOTHER MAKE OF EQUIPMENT IS USED WHICH REQUIRES MODIFICATION OR CHANGE OF ANY DESCRIPTION FROM THE DRAWINGS OR SPECIFICATIONS, THE CONTRACTOR SHALL BE RESPONSIBLE AS PART OF THIS WORK FOR MAKING ALL SUCH MODIFICATIONS AND CHANGES, INCLUDING THOSE INVOLVING OTHER TRADES WITH THE COST THEREOF INCLUDED IN HIS BID. IN SUCH CASE, CONTRACTOR SHALL SUBMIT DRAWINGS AND SPECIFICATIONS PRIOR TO STARTING WORK SHOWING ALL SUCH MODIFICATIONS AND CHANGES. HIS PROPOSAL SHALL BE SUBJECT TO THE APPROVAL OF THE TENANT'S CONSTRUCTION MANAGER.

F. EXISTING SHELL SPACE CONDITIONS

1. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE COORDINATION OF THE DEMOLITION OF EXISTING MECHANICAL WORK SHOWN ON THE MECHANICAL DRAWINGS AND THE MECHANICAL DEMOLITION SHOWN ON THE ARCHITECTURAL DRAWINGS.

2. THE CONTRACTOR SHALL INCLUDE, AND WILL BE HELD RESPONSIBLE FOR, THE REMOVAL OF ALL EXISTING FIRE PROTECTION, PLUMBING FIXTURES, PIPING, HVAC UNITS, REFRIGERANT RECAPTURE, EXHAUST FAN, ETC. AND ASSOCIATED ROOF CURBS NOT TO BE REUSED ON THIS PROJECT, UNLESS SPECIFICALLY NOTED OTHERWISE. CONTRACTOR MUST VERIFY WITH THE LANDLORD ALL PRESUMED ABANDONED EQUIPMENT, PIPES, DUCTWORK, AND EQUIPMENT PRIOR TO REMOVAL. ROOF CURBS SHALL BE REMOVED AND THE ROOF PATCHED UNLESS NOTED FOR REUSE OR RECONFIGURATION ON PLANS. ROOF PATCHING SHALL BE PERFORMED AT THE CONTRACTOR'S EXPENSE BY A ROOFING CONTRACTOR APPROVED BY THE LANDLORD. ALL EXTRANEOUS ITEMS IN THE SPACE OR ON THE ROOF (ABOVE THIS SPACE) NOT APPLICABLE TO THE NEW WORK OR PART OF THE LANDLORD'S OR ANOTHER TENANT'S ACTIVE SYSTEM MUST BE REMOVED AND ROOF/WALL/FLOOR/PATCHED/REPAIRED TO MATCH EXISTING STRUCTURE. Ventilation of XR8-E electric oven,

To Whom It May Concern:

Blodgett's electric convection ovens must be installed in accordance with NFPA 96. This standard states that cooking equipment used in processes producing smoke or grease laden vapors shall be equipped with an exhaust system complying with hood, duct system, grease removal, and fire extinguishing requirements in various chapters of the standard.

Blodgett Oven Company does not require the use of fire suppression Type I or a Type II exhaust hood for electric convection oven installations that do not produce smoke or grease laden vapors.

Thousands of installations throughout North America of Blodgett electric convection ovens exist without fire suppression. However, we cannot make judgments as to types of cooking that produce smoke or grease laden vapors. Blodgett and the NFPA committee therefore depend on the judgment of the local authority having jurisdiction to determine which cooking operations require protection features addressed in NFPA 96.
A certain model oven used for baking bread products such as cakes, sweet breads, and cookies might be judged by the local authority having jurisdiction as not producing grease laden vapors. The very same model oven used in a different location for broiling meats might be deemed as producing grease laden vapors. Since the Standard cannot address specific installations, the judgment must be made by the authority having jurisdiction.

I hope this correspondence helps you in your situation. If you require further assistance regarding this matter, do not hesitate to contact me

Dear Stanley,

Per your request, project 4789167924 was opened for the evaluation of grease-laden vapors produced from baking chocolate chip cookies in the stacked model Zephaire-200-E ovens.

The scope of this project was to determine the total grease emissions from baking chocolate chip cookies as the specified food load as noted in Appendix A. Testing is conducted in accordance with EPA Method 202 test guidelines to determine ultimate results. Results are used to determine compliance with Section 59 of UL710B, the Standard for Recirculating Systems, formerly Section 14 of UL 197, Eighth Edition, Supplement SB, and paragraph 4.1.1.2 of NFPA96, the Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations. The test was conducted at our facility in Northbrook, IL on November 6, 2019. This letter will report the results of the EPA202 test.

For the record, the test was conducted using stacked Blodgett, models Zephaire-200-E oven, rated 240 V, 11 kW, 3 phase to represent the ovens listed under Product at the front of this letter. The test media as shown in Appendix A was specified by Blodgett. Although the cookie recipe was not given to UL, Blodgett determined that the chocolate chip cookie recipe has the highest butter/oil content of any of the cookies they wanted to represent and was considered to be worst case for grease producing. Two ovens, stacked were tested. Each oven cavity was filled to the maximum capacity of 5 full size sheet pans, 12 cookies per pan for a total of 60 cookies per oven (120 cookies total of the two ovens per load). Total loads cooked was 29. Ovens were set at 300°F with 100% fan. Cook time was 0 hrs. 15 minutes each load. The test was conducted for a total of 8 hours. The results are considered to comply with UL710B, Section 59, formerly Section 14 of UL 197, Eighth Edition, Supplement SB, and NFPA96, paragraph 4.1.1.2 when tested with your specified food load and requested cook times since the total amount of grease-laden effluents collected was 0.69 mg/m³, which is less than 5 mg/m³ limit. No evaluation was conducted in regards to fire protection. In addition, no evaluation of the Blodgett stacked models Zephaire-200-E cooking appliance itself was conducted in respects to safety and sanitation.

POWER INPUT TEST (THREE PHASE): UL 197 Sec. 47 (6.2)
RATING (CSA 22.2 109-M1981):

METHOD (OVENS(S) ONLY)

[X] The supply voltage was adjusted to voltage and frequency as noted in "General Test Considerations", [240 V], [60 Hz].

The power input was measured with the appliance at the intended operating temperature under full-load conditions.

[X] (c-UL) - To determine the proper test voltage for the Temperature (Normal) and Temperature (Abnormal) tests, the supply voltage was adjusted to the increased test voltage as noted below. Following the test at increased test voltage, the supply voltage was adjusted to the value necessary to cause the appliance to draw the increased test [current] [and] [power], calculated as specified below.

Increased Test Voltage (V_I): 216V for appliances rated 208V.
250V for appliances rated between 220V-250V.

Increased Test Current (I_I): $I_I(V_I/V_r)$ = _____ A

Increased Test Power (W_I): $W_I(V_I/V_r)^2$ = _____ (W)(kW)

Where V_r, I_r, and W_r, are the rated voltage, current, and power of the appliance, respectively. Note: when the appliance is rated for a range of voltages, the mean of the range is to be used as V_r.

PARAMETERS

Appliance Ratings:

Volts: _240 V__; Current: __26.5___ A; Power: ___11___ kW

The top and bottom ovens (stacked) are merely a heat source for testing the hood. Therefore, we need only conduct the power input test at 240 and 250 V as indicated on the power supply data sheet.

CAPTURE TEST: UL 710B Sec. 58
UL 710 Sec. 31

METHOD

The stacked models Zephaire-200-E ovens with hood cooking appliance was placed under a hood operating at 500 CFM. Food product as specified below was then used for testing, see Emission Testing for specific details. The cooking area is to be observed for the presence of visible smoke and grease-laden air, and the hood assembly shall completely capture all of the emission as determined by observation.

COOKING METHOD

RESULTS

Their [was] [was not] the presence of visible smoke and grease-laden air from the appliance during testing.

The sample [did] [did not] capture all of the emissions from the cooking appliance.

EMISSION TEST: UL 710B Sec. 59

METHOD (without hood)

TEST FOR EVOLUTION OF SMOKE OR GREASE-LADEN AIR (300°F):

The model stacked models Zephaire-200-E ovens with hood cooking appliance was placed under a hood operating at 500 CFM, and was tested using a method derived from EPA Method 202. The Manufacturer also provided cookies for the test.

A 12 in. by 6 in. rectangular, 108 in. tall sheet metal stack was constructed on top of the hood. A sampling port was located approximately 80 in. downstream from the hood exhaust, at which point it was determined there was laminar flow. The sampler was assembled and an out of stack filter was used. A pre-leak check was conducted and determined to be < 0.02 ft³/min. Sampling was determined to be done at 8 traverse points.

The oven was operated normally by cooking the following foods:

[Other]
X Chocolate Chip Cookies

Two ovens, Stacked. Each oven cavity was filled to the maximum capacity of 5 full size sheet pans, 12 cookies per pan for a total of 60 cookies per oven (120 cookies total of the two ovens per load). Total loads cooked 29. Ovens were set at 300°F with 100% fan. Cook time was 0 hrs. 15 minutes.

The cooking cycle was repeated for 8 hours of continuous cooking.

During the cooking operation, it was noted whether or not visible effluents evolved from the air exhaust of the hood. Gauge, meter and temperature readings were taken and recorded every 10 min. After cooking, the condition of the duct was noted and a post-leak check was conducted and determined to be < 0.02 ft³/min.

EMISSION TEST (CONT'D): UL 710B Sec. 59

After being allowed to cool, the sampling equipment was disassembled. The glass-filter is to be removed using a pair of forceps and placed in a clean petri dish. The dish is to be sealed and labeled "SAMPLE 1".

A sample of the acetone of the same volume that will be used to rinse-out the nozzle and probe is to be placed into a clean sample bottle, sealed, and labeled "SAMPLE 2". The level of the liquid in the sample bottle is to be recorded.

The inside of the nozzle and probe is to be rinsed with acetone taking care to collect all the rinse material in a clean sample bottle. The sample bottle is to be sealed, labeled "SAMPLE 3", and the level of the liquid in the bottle is to be recorded.

The liquid in the first three impingers is to be measured and the total volume is to be recorded which will be compared to the original volume. The liquid is to be quantitatively transferred to a clean sample bottle. Each impinger and the connecting glassware including the probe extension are to be rinsed twice with water. The rinse water is to be collected and added to the same sample bottle. The sample bottle is to be sealed, labeled "SAMPLE 4" and the level of the liquid in the bottle is to be recorded.

This rinse process is to be repeated with two rinses of methylene chloride ($MeCl_2$). The rinses are to be recovered in a clean sample bottle. The sample bottle is to be sealed, labeled "SAMPLE 5" and the level of the liquid in the bottle is to be recorded.

A volume of water approximately equivalent to the volume of water used to rinse and a volume of $MeCl_2$ approximately equivalent to the volume of $MeCl_2$ used to rinse is to be placed in two clean sample bottles. The sample bottles are to be sealed, labeled "SAMPLE 6" and "SAMPLE 7" respectively, and the level of the liquid in the bottles is to be recorded.

The weight of the fourth impinger containing the silica gel is to be recorded and then the silica gel can be discarded.

The analysis phase was done in accordance with EPA Method 202, using the out of stack filter.

RESULTS (WITHOUT HOOD)

The results [are] [are not] considered acceptable because there [was] [was not] visible smoke emitted from the exhaust of the hood during the normal cooking operation. There [was] [was not] noticeable amounts of smoke accumulated in the test room after 8 hours of continuous cooking.

The total amount of grease-laden effluents collected by the sampling equipment was found to be 0.69 mg/m³, which is [less] [more] than 5 mg/m³.

The total grease emissions (per clause 78.2 of 710B) in pounds per hour per linear food of hood was 0.000385 lb/hr/ft.

ELECTRICAL CALCULATIONS:

PANEL 'B' LOAD = 87,006VA
GRAND TOTAL TENANT LOAD = 87,006VA

BUILDING OPERATING VOLTAGE IS 120/208V 3P 4W

TOTAL AMPERAGE AT MAIN FEEDING BREAKER IN DISTRIBUTION PANEL = 87,006 / (208 * Sqrt (3)) = 87,006 / 359.84 = 242 AMPS (FULL CONNECTED LOAD; WITHOUT DEMAND FACTOR)

DEMAND FACTOR FOR ALL ELECTRIC RESTAURANT LOADS (NEC TABLE 220.88):
[0-200kVA * 0.8 OF TOTAL CONNECTED LOAD]

PANEL 'B' TOTAL CONNECTED LOAD = 87,006;
ALL ELECTRIC RESTAURANT IS LESS THAN 200kVA;
87,006 * 0.8 = 69,605VA

DEMAND FACTOR AMPS:
69,605 / (208 * Sqrt (3)) = 69,605 / 359.84 = 193 AMPS

Inspection Checklist

Energy Code: 2018 IECC

Requirements: 100.0% were addressed directly in the COMcheck software

Text in the "Comments/Assumptions" column is provided by the user in the COMcheck Requirements screen. For each requirement, the user certifies that a code requirement will be met and how that is documented, or that an exception is being claimed. Where compliance is itemized in a separate table, a reference to that table is provided.

Section # & Req.ID	Plan Review	Complies?	Comments/Assumptions
