Plans shall comply with the 2018 International Residential Code with amendments as adopted by the governing jurisdiction. If any changes or deviations from the plans are made during construction, the contractor shall notify the appropriate authority and the engineer of record, either (or both) of whom may require revised drawing or calculations at its discretion.

Where discrepancies exist between the standard comments, notes from the design professional or the code, the most restrictive shall apply.

The dwelling shall comply with the following load conditions:

AREA	MIN DEAD LOAD	MIN LIVE LOAD
EXTERIOR BALCONIES	10	60
DECKS	10	40
CEILING JOISTS/ATTICS NO STORAGE- SCUTTLE ACCESS ONLY ROOF SLOPE 3:12 OR LESS CEILING JOISTS/ATTICS W/O STORAGE-	5	10
SCUTTLE ACCESS ONLY ROOF SLOPE OVER 3:12	10	10
CEILING JOISTS/ATTICS W/ STORAGE- DOOR/PULL DOWN LADDER ACCESS	10	20
ROOMS- NON-SLEEPING	10	40
SLEEPING ROOMS	10	30
ROOF-LIGHT ROOF COVERING	10	20
ROOF-HEAVY ROOF COVERING CONCRETE/TILE/SLATE	20	20
CLUBHOUSE COMMON AREA	15	100
CLUBHOUSE OFFICE	15	50

Note: Heavy roof covering will not be installed or used in the design calculations unless it is specifically noted on the plans that the design is for a heavy roof covering.

Foundations

1. The foundation design shall be based on a minimum soil bearing capacity of 2000 psf, unless otherwise indicated on the plans or if modified by an engineering report based on actual site conditions.
2. Concrete shall meet the following specified design strength criteria:
   - 2500psi for basement floor slabs on undisturbed soil
   - 3000psi for footings & foundation walls
   - 3500psi for garage floor slabs.
3. Footings shall extend below the frost line; minimum depth 36 inches below grade.
4. Unless otherwise noted on the plans or if site conditions require otherwise, footings shall be a minimum of 16 inches wide and 8 inches deep with 2 - #4 bars continuous.
5. Column pads shall be a minimum 30" x 30" x 12" with 4 - #4 bars each way unless otherwise noted.
6. Unless otherwise noted on the plans, foundation walls shall be minimum 8 inches thick x 8'-0" (or 9'-0") tall and reinforced per detail 8-S2.01.
   Foundation walls greater than 10'-0" tall require a separate engineered design. Provide a 2'-0" long interior or exterior dead-men for any straight wall panels exceeding 20'-0" in length (reference detail 4-S2.01).
7. Reinforcement shall be minimum grade 40 unless otherwise noted. Reinforcement shall lap a minimum of 24 inches at ends, splices, and around corners.
8. Foundation wall shall be backfilled with a clean lean clay (or better) low volume change material. On-site material may be used if deemed acceptable by the geotechnical engineer of record.
9. Wall will not achieve full strength until the basement slab and first floor deck have been properly placed. If backfilling the interior of the foundation wall with greater than 8" of earthen fill or 24" of granular fill, a structural basement slab, or alternate engineered solution (i.e. engineered fill) will be required.
