RE: Field Issue of spliced top plates and clarification of LVL bearing for Lot #125 Manor at Stoney Creek –1920 SW Merryman Dr. Lee's Summit, MO 64082 – Permit # PPRS20214879

Top plate splices not staggered throughout:

Recommended modifications:

- **Install 24" CS-16 strap per manufacturer's specs at each top plate with splice staggered less than 24" oc.**

1. Fastener quantities and end lengths are calculated using an increase for wind or seismic loading.
 2. Use half of the required nails in each member being connected to achieve the listed loads.
 3. Calculate the connector value for a reduced number of nails as follows:
 Allowable Load = $\frac{\text{No. of Nails Used}}{\text{No. of Nails in Table}} \times \text{Table Load}$
 Example: CMSTC16 in DF/SP with 40 nails total.
 (Half of the nails in each member being connected)
 Allowable Load = $\frac{40 \text{ Nails (Used)}}{50 \text{ Nails (Table)}} \times 4,585 \text{ lb.} = 3,668 \text{ lb.}$
 4. Tension loads apply for uplift when installed vertically.
 5. Nails: 16d = 0.162" dia. x 3 1/8" long, 16d sinker = 0.148" dia. x 3 1/4" long, 10d = 0.148" dia. x 3" long. See pp. 26-27 for other nail sizes and information.

LVL bearing at garage wall:

- **(2) 1-3/4" x 9-1/4" LVL shall bear on a minimum of 1.5" Douglas Fir Larch #2 at corner of garage wall.**
- **LVL supports roof loads, exterior wall weight and floor loads with a reaction of 3500 #.**
- **Pony wall studs shall be fastened to adjacent blocking/structural member with 16D nails at 3" oc.**

Sincerely,

Bradley Huxol, PE
