Re: Long-Term Monitoring Plan Survey Points
Lots 7A (Area A), 7B (Area C), and 7C (Area B)
Mine Remediation at Streets of West Pryor
Lee's Summit, Missouri
Geotechnology Project No. J035637.02

Dear Mr. Olson,

This letter transmits the results of settlement monitoring performed on the portions of the Streets West of Pryor project for June 2022. Monitoring of potential ground movements has been accomplished using a combination of surface monitoring points (SMPs) and survey points established on sanitary and storm sewer inlets and/or manholes. These points continue to be surveyed by BHC, Inc. Additional data points will be added to the monitoring record, as they are collected, and updated results of settlement monitoring will be provided.

Attached to this letter is monitoring data for Monitoring Points as shown on the attached Table 1 an graphic plots. Current survey readings were obtained on June 8, 2022 in general accordance with the Long Term Monitoring Plan (LTMP). Table 1 documents the monitoring events to date and the attached graphic plots depict the data obtained in relation to elapsed time. Based on the current construction schedule, it is anticipated that instillation of sleeved rod monuments will commence in the next 30 to 60 days. Preliminary locations are under review for potential conflicts with potential future construction.

As of the current set of data, including the new baseline reading, the monitoring results do not indicate that settlement has exceeded the limits established in the LTMP. Therefore, the planned readings will continue every two months for the duration of surface construction. The following attachments are included for the current results of the LTMP.

- Figure 1 - Monitoring Plan Locations
- Figure 2 - Monitoring Results from BHC
- Table 1 - Monitoring Point Displacement Summary
- Exhibit 1 - Monitoring Point Graphic Plots

(NOT TO SCALE)

GENERAL NOTES

1. Basis of Bearings: Initial Monitoring control was derived from GPS Static data collected on several of the Monitoring Control Points and submitted to OPUS for data processing. The OPUS provided data was referenced to the Missouri State Plane Coordinate System, West Zone (NAD83). The coordinates derived from this OPUS solutions were then adjusted to ground using the CAF from the Final Plat of "Streets of West Pryor Lots 1 thru 14, Tracts "A", "B", "C", & "D". Using the CAF from the above mentioned plat allows the monitoring points to be on a similar datum to the proposed site design. The ground coordinates were scaled from zero using the CAF of 0.99990084.
2. The monitoring control and the initial monitoring points were then traversed using a Trimble SX10 instrument and subsequently adjusted using MicroSurvey StarNet Version 9 software. A level run was run through control points 10 thru 13 to assist in establishing the initial monitoring control.
3. Base Line Control Points were intentionally placed off of the site in order to avoid placing them over areas of the mine that are currently being remediated.
4. This monitoring survey is based on field work completed on the date shown in the title block.
5. Monitoring points are labeled to indicate which section of mine remediation zone that they are closest to and a point number to assist in the survey monitoring. Example A100 = "A" indicates the "A" remediation zone and "100" is the survey point used while monitoring.
6. It has been indicated that some of the inlet lids will be moved during the progress of the construction. It has been requested that when the inlets are being adjusted that monitoring will be taken before and after the inlet has been adjusted in order to maintain a viable monitoring point that will be maintained through the monitoring term.

	Value Greater than 0.04'				105	1006601.94	2812547.13	986.35		Inlet F-2
	Value Greater than 0.02'				106	1006319.59	2812353.76	988.24		Inlet A-1

Note: Point's 10-14 on previous exhibits are Control Point's for monitoring and have been removed to simplify exhibit. Point's 100-103 are monitoring points as shown on the exhibit. Monitoring Point #100 is on an Inlet @ NE Corner of Site

Note: Lid replaced and mark removed on Inlet A-1 after initial monitoring. Point's 104-106 above are new or replacement monitoring points on the site.

Inlet Lids on Structures B-1 and A-3 have been adjusted since the initial monitoring. The new location of points will now be monitored.

Note: The certification on this exhibit is to verify that the horizontal and vertical positions shown hereon were collected under my direct supervision. This certification does not intend to show anything other what is shown on the exhibit. We are not certifying any reason or cause for the differences in the locations or elevations.
