December 15, 2022

To Whom It May Concern:

The purpose of this letter is to inform the required departments that our chemical storage methods for the chemicals listed in our haz-mat inventory statement will be the same as they were before the fire on December 24th 2021. We will utilize our 1000 sq ft storeroom with pallet racking for all of our overstock that needs to be stored inside making sure making sure to utilize bottom shelves for chemicals to keep chemical storage less than 8 feet off the ground. The layout, size, and storage for our showroom will remain the same as well. Display shelving that is 6 feet tall will placed along the East exterior wall along with two aisles of display shelving located slightly to the north and to the east of the center of the showroom. We maintain a constantly revolving inventory. Our lbs per sq ft of each type/class of chemicals will never exceed 6lbs per sq ft per type/class and the majority of the time the lbs per sq ft per type/class will be 4 or lower.

Sincerely,

President
Amanda Lamison
