FINAL DEVELOPMENT PLAN
SAINT LUKE'S EAST HOSPITAL - ASC EXPANSION & RENOVATION

LEE'S SUMMIT, MO 64086

100 NE SAINT LUKE'S BLVD.

GENERAL NOTES

1. All work in public easement and Right-of-Way shall be installed per the requirements and specifications of the City of Lee's Summit, Missouri.
2. All existing topographic, survey, and utility information shown was provided to BHC in the form of an Topographic Survey prepared by BHC and dated July 12, 2022. Contractors shall satisfy themselves as to the existing conditions of the site and have all utilities located prior to commencing construction.
3. The Contractor shall be required to obtain all Federal, State, and Local permits required for this project prior to commencing construction.
4. Any work adjacent to or crossing existing streets requires proper traffic control devices. Traffic control devices shall be placed in accordance with the Manual of Uniform Traffic Control Devices (MUTCD).
5. The contractor shall be required to demolish, remove and dispose of all existing structures, pavements, and features necessary to construct the improvements shown hereon. Any waste materials generated during construction shall be removed from the site by the Contractor and disposed of in accordance with all local, State, and Federal regulations governing such disposal.
6. The contractor shall prevent any trash, debris, or liquid wastes from being disposed of in sanitary sewers, storm sewers, or open drainage systems.
7. The Contractor shall be solely responsible to protect adjacent property, structures, and other improvements from damage during construction. In the event of damage to adjacent property, structures, or improvements, the contractor shall repair or replace such damage to the Owners's satisfaction at the Contractor's expense.
8. Contractors at the site shall be solely responsible for jobsite safety for all aspects of work shown hereon.
9. All work and materials used in the construction of the improvements shown hereon shall comply with all referenced standards, specifications, and plan notes.
10. All buildings are shown as a reference only. All buildings shall be located and constructed per the Architectural drawings prepared by others.
11. Contractor shall be responsible for contacting all utility companies for field locations of underground utilities affected by the contract. All existing utilities indicated on these plans are according to the best information available to the engineer; however, all utilities actually existing may not be shown. Utilities damaged through the negligence of the contractor to obtain the location of same shall be repaired or replaced at the expense of the contractor.
12. Coordinate with facility representative as to when construction activities may be performed to work with the operations of the facility.
13. Any and all hazards shall be properly identified and barricaded from access during all non-construction periods.
14. A Right-of-Way permit is required from the City of Lee's Summit, Missouri Public Works Department for any work within the public right-of-way.

All existing utility locations shown are approximate only and are not guaranteed to be accurate or all inclusive. Contractor shall be responsible for contacting all utility companies and verifying the actual field locations of all utilities prior to any construction activity. Contractor shall keep all utility locations current. Utilities damaged through the negligence of the contractor to obtain the proper field locations shall be the responsibility of the contractor to repair or replace at their expense and at the direction of the utility company. The contractor shall pothole and survey all utility crossings prior to construction of any portion of storm sewer, sanitary sewer laterals, underdrains, conduit and any other subsurface element of the project. The survey information shall be forwarded to the project engineer for review. The contractor shall not begin construction on any subsurface element on the project without the approval of the project engineer. Utility coordination, potholing/surveying shall be subsidiary to other bid items.

GENERAL NOTES

1. *Contractor shall verify the location, size, material and depth of all utilities prior to any excavation or construction activity.*
2. *All materials shall be removed and disposed of off-site. It is the contractors responsibility to meet all applicable laws and regulations pertaining to the disposal of construction/demolition material.*
3. *The Contractor shall ensure that any structures to remain which are damaged during demolition operations shall be repaired to meet current code, at no additional cost to the owner.*
4. *The Contractor shall remove any and all existing debris which is encountered from the existing site. This shall include, but shall not be limited to, footings, concrete slabs, conduits, granular subgrade, utility services, and/or unsuitable structural fill material as determined by the owner's engineer. The cost for these removals shall be considered incidental to the project. Said debris shall become property of the contractor and it shall be the responsibility of the contractor to dispose of properly off-site.*
5. *It shall be the Contractor's responsibility to meet all applicable laws and regulations pertaining to the disposal of construction/demolition material.*
6. *The Contractor shall be responsible for obtaining and payment of any permits for demolition that pertain to this project.*
7. *All protection fencing shall be installed prior to demolition/construction activity. The Contractor shall provide a 6-foot security fence around the entire job site with locked gated access points, if required by the owner or the city.*
8. *All existing utilities removed during construction shall have their trenches backfilled with structural fill and be compacted to the requirements for structural fill.*
9. *All removals required to properly perform the work (whether shown on the plans or not) shall be performed by the Contractor at no additional cost to the owner.*

DEMOLITION NOTES

01 REMOVE & DISPOSE OF EXISTING ASPHALT.

02 REMOVE & DISPOSE OF EXISTING CURB.

03 REMOVE AND DISPOSE OF CONCRETE SIDEWALK.

04 REMOVE THROAT ON WEST SIDE OF INLET. FILL WEST INLET OPENING WITH MORTAR TO CLOSE OFF OPENING.

05 REMOVE AND DISPOSE OF ENOUGH 8" PVC SANITARY MAIN TO ALLOW PLACEMENT OF NEW MANHOLE. ABANDON REMAINING SANITARY MAIN AND FILL WITH FLOWABLE FILL.

06 EXISTING UTILITY TUNNEL ACCESS LID. REMOVE ACCESS LID.

07 SAW CUT EXISTING PAVEMENT TO FULL DEPTH AND CLEAN EDGE.

08 REMOVE & DISPOSE OF EXISTING PARKING SIGNS.

09 REMOVE AND DISPOSE OF ENOUGH 60" RCP STORM MAIN TO ALLOW PLACEMENT OF NEW JUNCTION BOX. REMOVE 60" RCP STORM MAIN TO THE WEST. (1)

10 REMOVE EXISTING LIGHT POLE.

11 PLUG SOUTHEAST PIPE OPENING WITH BRICK AND MORTAR.

12 REMOVE & DISPOSE OF CONCRETE PAVEMENT.

13 EXISTING 8x8 CONCRETE STORM JUNCTION BOX. REMOVE & DISPOSE OF LID AND TOP 2 FT OF STRUCTURE. FILL STRUCTURE WITH FLOWABLE FILL.

14 REMOVE AND DISPOSE OF EXISTING LANDSCAPING.

15 ABANDON TELECOMMUNICATION LINE WHERE BUILDING EXPANSION WILL BE. REMOVE IF IT WILL BE IN THE WAY OF NEW FOOTINGS. SEE C400 FOR RELOCATION.

16 ABANDON POWER LINE WHERE BUILDING EXPANSION WILL BE. REMOVE IF IT WILL BE IN THE WAY OF NEW FOOTINGS. SEE C400 FOR RELOCATION. (1)

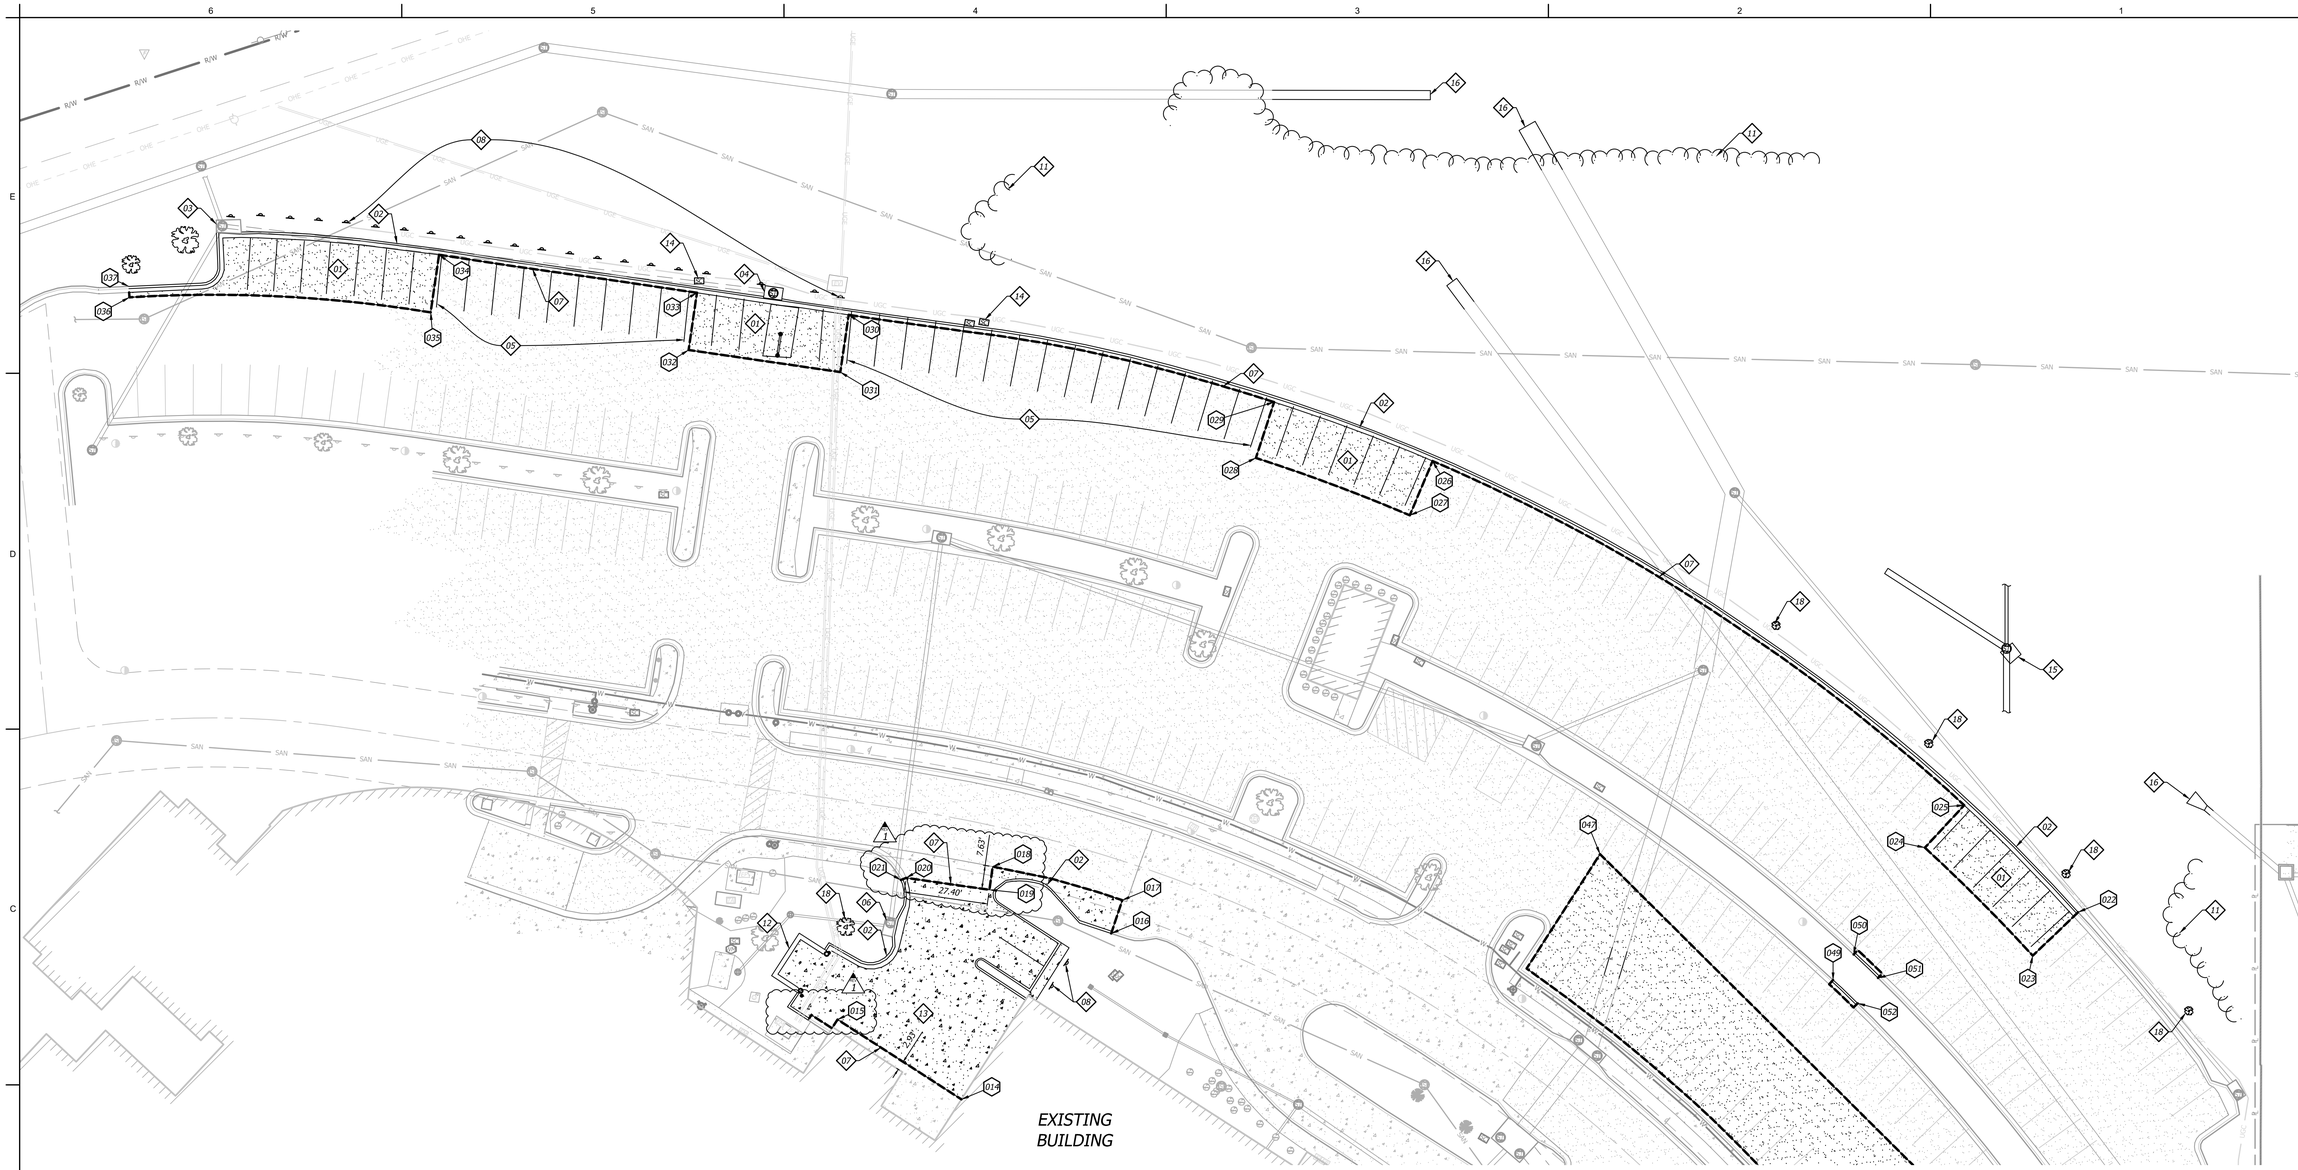
DEMOLITION PLAN - BUILDING EXPANSION

Jan 20, 2023 - 11:42am Plotted By: kurt.yoder V:\033570-st. lukes east\04-DWG\Eng\Sheet\PDP\033570-SHTS-DEMO.dwg Layout: Demo Plan - BLDG EXP



GENERAL NOTES

1. *Contractor shall verify the location, size, material and depth of all utilities prior to any excavation or construction activity.*
2. *All materials shall be removed and disposed of off-site. It is the contractors responsibility to meet all applicable laws and regulations pertaining to the disposal of construction/demolition material.*
3. *The Contractor shall ensure that any structures to remain which are damaged during demolition operations shall be repaired to meet current code, at no additional cost to the owner.*
4. *The Contractor shall remove any and all existing debris which is encountered from the existing site. This shall include, but shall not be limited to, footings, concrete slabs, conduits, granular subgrade, utility services, and/or unsuitable structural fill material as determined by the owner's engineer. The cost for these removals shall be considered incidental to the project. Said debris shall become property of the contractor and it shall be the responsibility of the contractor to dispose of properly off-site.*
5. *It shall be the Contractor's responsibility to meet all applicable laws and regulations pertaining to the disposal of construction/demolition material.*
6. *The Contractor shall be responsible for obtaining and payment of any permits for demolition that pertain to this project.*
7. *All protection fencing shall be installed prior to demolition/construction activity. The Contractor shall provide a 6-foot security fence around the entire job site with locked gated access points, if required by the owner or the city.*
8. *All existing utilities removed during construction shall have their trenches backfilled with structural fill and be compacted to the requirements for structural fill.*
9. *All removals required to properly perform the work (whether shown on the plans or not) shall be performed by the Contractor at no additional cost to the owner.*

DEMOLITION NOTES

01 *REMOVE & DISPOSE OF EXISTING ASPHALT.*

02 *REMOVE & DISPOSE OF EXISTING CURB.*

03 *CURB INLET TO REMAIN. REMOVE THROAT AND REBUILD THROAT. PLUG STORM MAIN OPENING FROM THE EAST WITH BRICK AND MORTAR.*

04 *REMOVE CURB INLET. ABANDON STORM MAIN TO THE WEST.*

05 *REMOVE PARKING STALL STRIPING FROM PAVEMENT. PAVEMENT TO REMAIN HERE.*

1 06 *REMOVE CURB INLET TOP. CURB INLET IS TO BE CONVERTED TO AN AREA GRATE INLET. SEE STORM PLANS.*

07 *SAW CUT EXISTING PAVEMENT TO FULL DEPTH AND CLEAN EDGE.*

08 *REMOVE & DISPOSE OF EXISTING PARKING SIGNS.*

09 *NOT USED.*

10 *REMOVE EXISTING LIGHT POLE.*

11 *CLEAR TREES AND BRUSH TO ALLOW FOR GRADING.*

12 *REMOVE & DISPOSE OF TRASH ENCLOSURE.*

13 *REMOVE & DISPOSE OF CONCRETE PAVEMENT.*

14 *REMOVE SPRINKLER EQUIPMENT*

15 *REMOVE & DISPOSE OF CONCRETE STORM PIPES AND OUTLET STRUCTURE*

16 *REMOVE & DISPOSE OF CONCRETE STORM PIPES AND HEADWALLS TO ALLOW FOR PLACEMENT OF JUNCTION BOXES. SEE STORM PLANS FOR LOCATIONS OF JUNCTION BOXES.*

17 *NOT USED.*

18 *REMOVE AND DISPOSE OF EXISTING LANDSCAPING.*

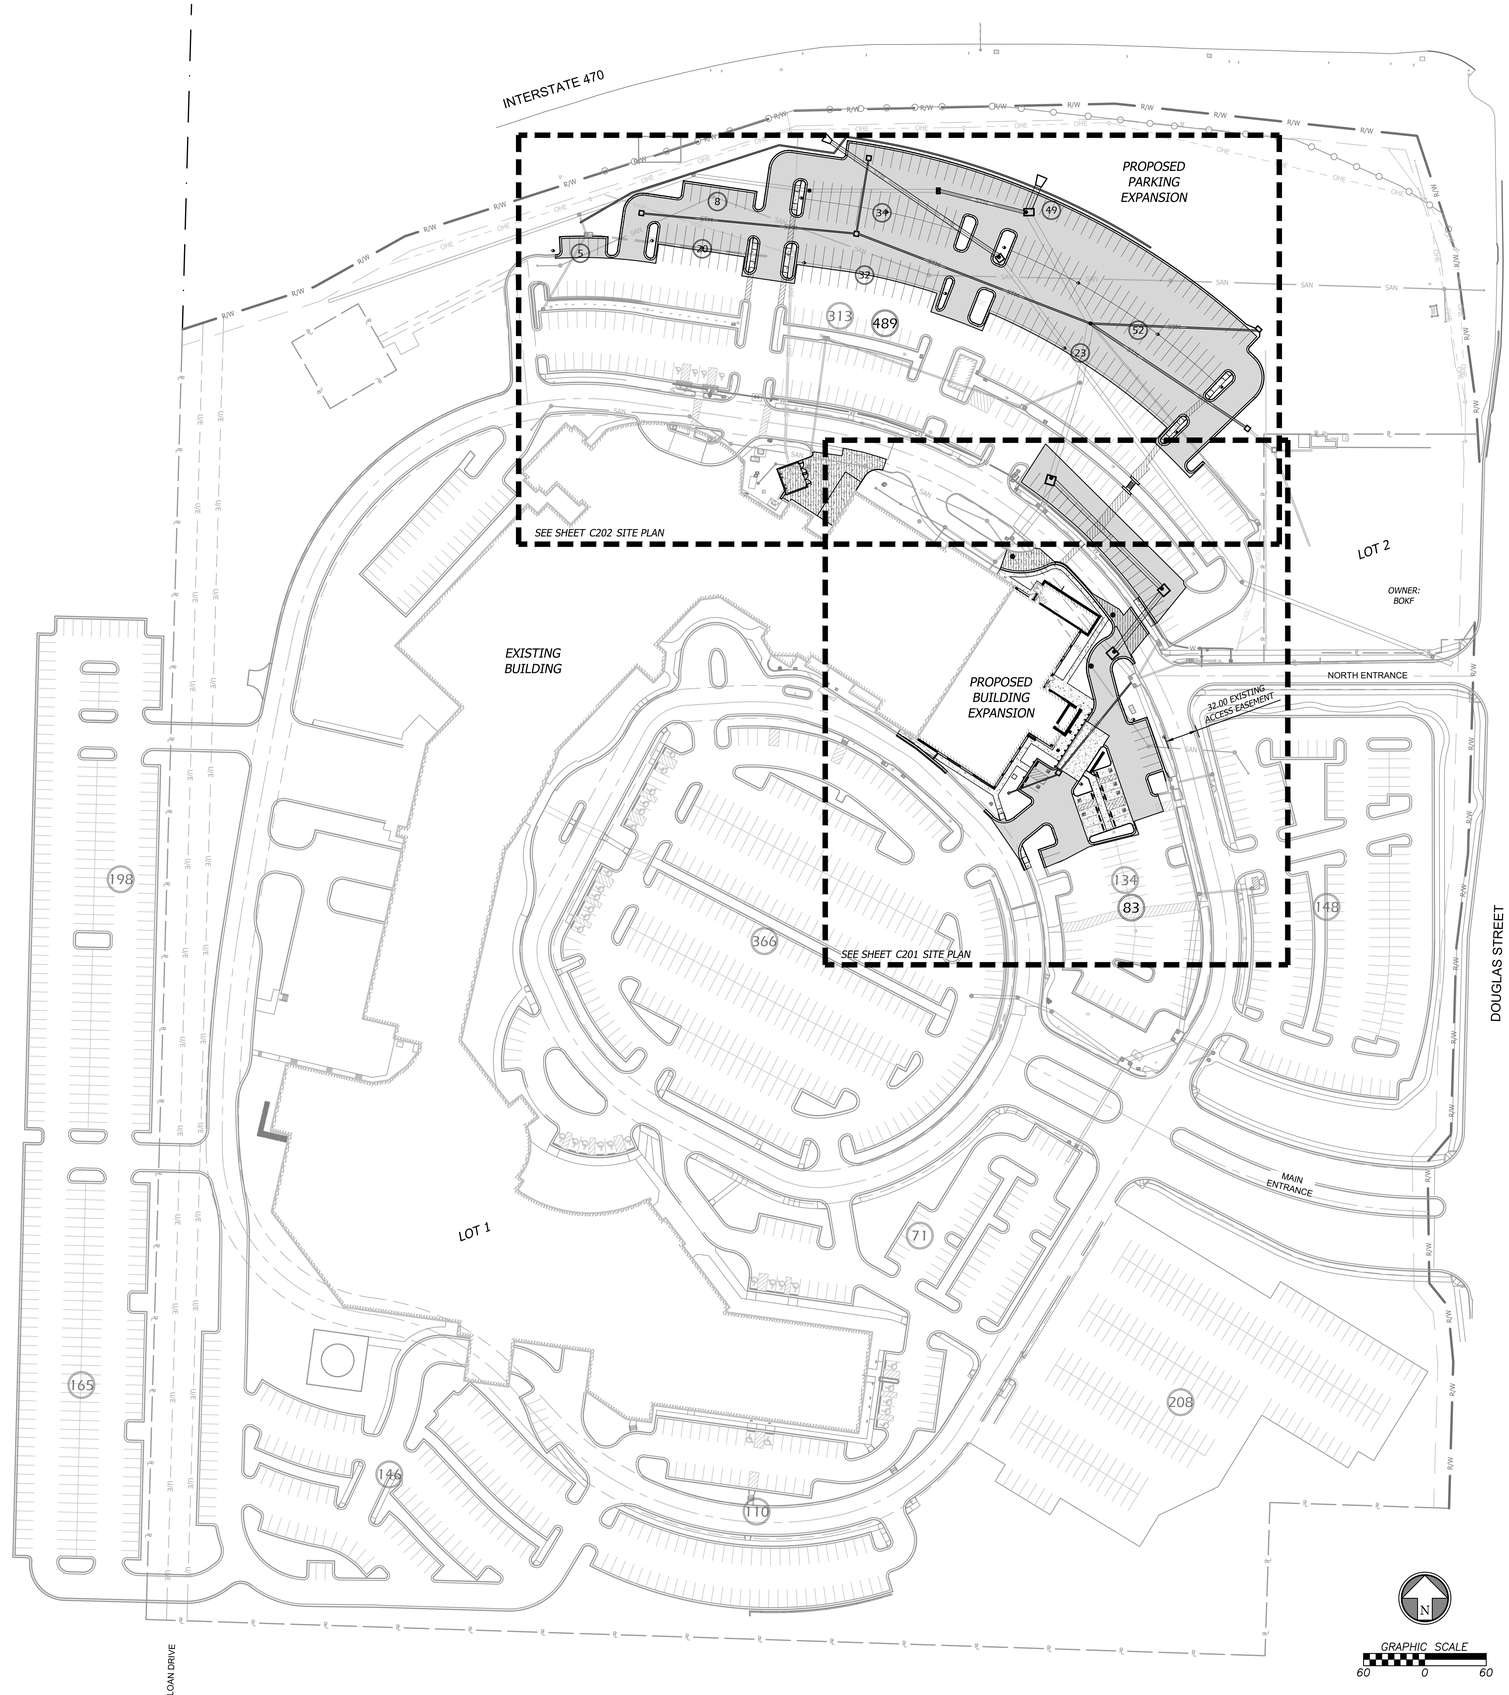
DEMOLITION PLAN - PARKING EXPANSION

Jan 18, 2023 - 8:49am Plotted By: kurt.yoder V:\03570-St. Lukes East\04-DWG\Eng\Sheet\FDN\03570-SHT5-DEMO.dwg Layout: Demo Plan - PRKG EXP



GENERAL NOTES

1. CONTAINING THE NET AREA OF 1,753,967 SQ. FT. OR 40.266 ACRES.
2. ELEVATIONS ARE BASED ON USGS DATUM, NAVD 88.
3. CONTOURS ARE SHOWN AT 1 FEET INTERVALS.
4. ALL STREETS, STORM SEWER, SANITARY SEWERS AND WATER LINES SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE CITY OF LEE'S SUMMIT, MISSOURI, DESIGN AND CONSTRUCTION MANUAL.
5. TYPE "CG-1" CONCRETE CURB & GUTTER SHALL BE USED THROUGHOUT THIS PROJECT. SEE KCAPWA STANDARD DETAIL (C-1).
6. ALL CONSTRUCTION SHALL BE IN ACCORDANCE WITH THE CITY OF LEE'S SUMMIT DESIGN AND CONSTRUCTION MANUAL, CITY ORDINANCE NO. 5813
7. THE WATER & SANITARY SEWER UTILITY CONTACT IS WATER UTILITIES DEPARTMENT, OPERATIONS DIVISIONS AT (816) 969-1940.

BENCHMARKS

BENCHMARK NUMBER: 1
CHISELED SQUARE ON THE FRONT FACE OF A DUAL MANHOLE CURB INLET, LOCATED 49.8 FEET NORTHWEST OF THE NORTHEAST CORNER OF THE NORTH END OF SAINT LUKE'S HOSPITAL.

ELEVATION= 982.88

BENCHMARK NUMBER: 2
CHISELED SQUARE ON THE FRONT FACE OF A CURB INLET, LOCATED +97.4 FEET SOUTHWEST OF THE SOUTHEAST CORNER ON THE NORTH END SAINT LUKE'S HOSPITAL.

ELEVATION= 979.35

LEGAL DESCRIPTION

LOT 1 OF SAINT LUKE'S HOSPITAL OF LEE'S SUMMIT LOTS 1 AND 2

DIMENSION PLAN - PARKING EXPANSION

Jan 16, 2023 - 2:40pm Plotted By: kurt.yoder V:\03570-st. lukes east\04-DWG\Eng\Sheet\FDP\03570-SHT5-DIMS.dwg Layout: Dims Plan

GRADING NOTES

1. Contractor shall obtain a copy of the Geotechnical Services Report for the project and be familiar with the existing conditions and recommendations contained in the report if such a report has been prepared.
2. Contractor is responsible for any over excavation of existing unsuitable soils will be required under building and pavement areas. Contractor shall perform over excavation of unsuitable soils as a part of this work.
3. Contractor shall obtain soils suitable as structural fill from off-site sources. All borrow materials must be tested and approved by the Geotechnical Engineer prior to importing the soils to the project site.
4. Contractor shall operate under the terms and permits included in the Stormwater Pollution Prevention Plan (SWPPP) prepared for this project and permitted through the State of Missouri. Contractor shall employ a qualified person to conduct regular inspections of the site erosion control measures and document such inspections in the SWPPP document maintained by the Contractor.
5. All topsoil, vegetation, root structures, and deleterious materials shall be stripped from the ground surface prior to the placement of embankments. Contractor shall obtain the on-site geotechnical representative's acceptance of the existing ground surface materials and the proposed fill material prior to the placement of fill.
6. All proposed contour lines and spot elevations shown are finish ground elevations. Contractor shall account for pavement depths, building pads, topsoil, etc when grading the site.
7. All disturbed areas that are not to be paved (green spaces) shall be finish graded with a minimum of six inches of topsoil.
8. All excavation and embankments shall comply with the recommendations provided by the geotechnical engineer.
9. Prior to placing any concrete or asphalt pavement the contractor shall perform a proof roll of the pavement sub-grade with a fully loaded tandem axle dump truck. The proof roll shall be conducted in the presence of the on-site geotechnical representative. Areas that display rutting or pumping that are unsatisfactory to the geotechnical representative shall be re-worked and a follow-up proof roll shall be conducted prior to acceptance of the sub-grade for paving. The contractor may, at its own expense, stabilize the sub-grade using Class C fly ash or quicklime, as approved by the geotechnical engineer.
10. Finished grades shall not be steeper than 3:1.
11. All grading work shall be considered unclassified. No additional payments shall be made for rock excavation. Contractor shall satisfy himself as to any rock excavation required to accomplish the improvements shown hereon.
12. A 2.0% maximum cross slope shall be maintained on all pedestrian sidewalks and paths.

FLOOD STATEMENT

The subject property lies within Flood Zone " X " (unshaded) (Areas determined to be outside the 0.2% annual chance floodplain.), as shown on the Jackson County, Missouri and Incorporated Areas Flood Insurance Rate Map (F.I.R.M.).

Map Number: 29095C0409G
Panel No: 409 of 625
Map Revised Date: January 20, 2017

NOTE: This statement is provided for informational purposes only and shall in no way constitute a basis for a flood certificate. No field work was performed to establish the boundaries of this zone. The information was derived by scaling the subject property on the above referenced map.

BENCHMARKS (DATUM: NAVD88)

BENCHMARK NUMBER: 1
ELEVATION= 982.88

CHISELED SQUARE ON THE FRONT FACE OF A DUAL MANHOLE CURB INLET, LOCATED 49.8 FEET NORTHWEST OF THE NORTHEAST CORNER OF THE NORTH END OF SAINT LUKE'S HOSPITAL.

BENCHMARK NUMBER: 2
ELEVATION= 979.35

CHISELED SQUARE ON THE FRONT FACE OF A CURB INLET, LOCATED ±97.4 FEET SOUTHWEST OF THE SOUTHEAST CORNER ON THE NORTH END SAINT LUKE'S HOSPITAL.

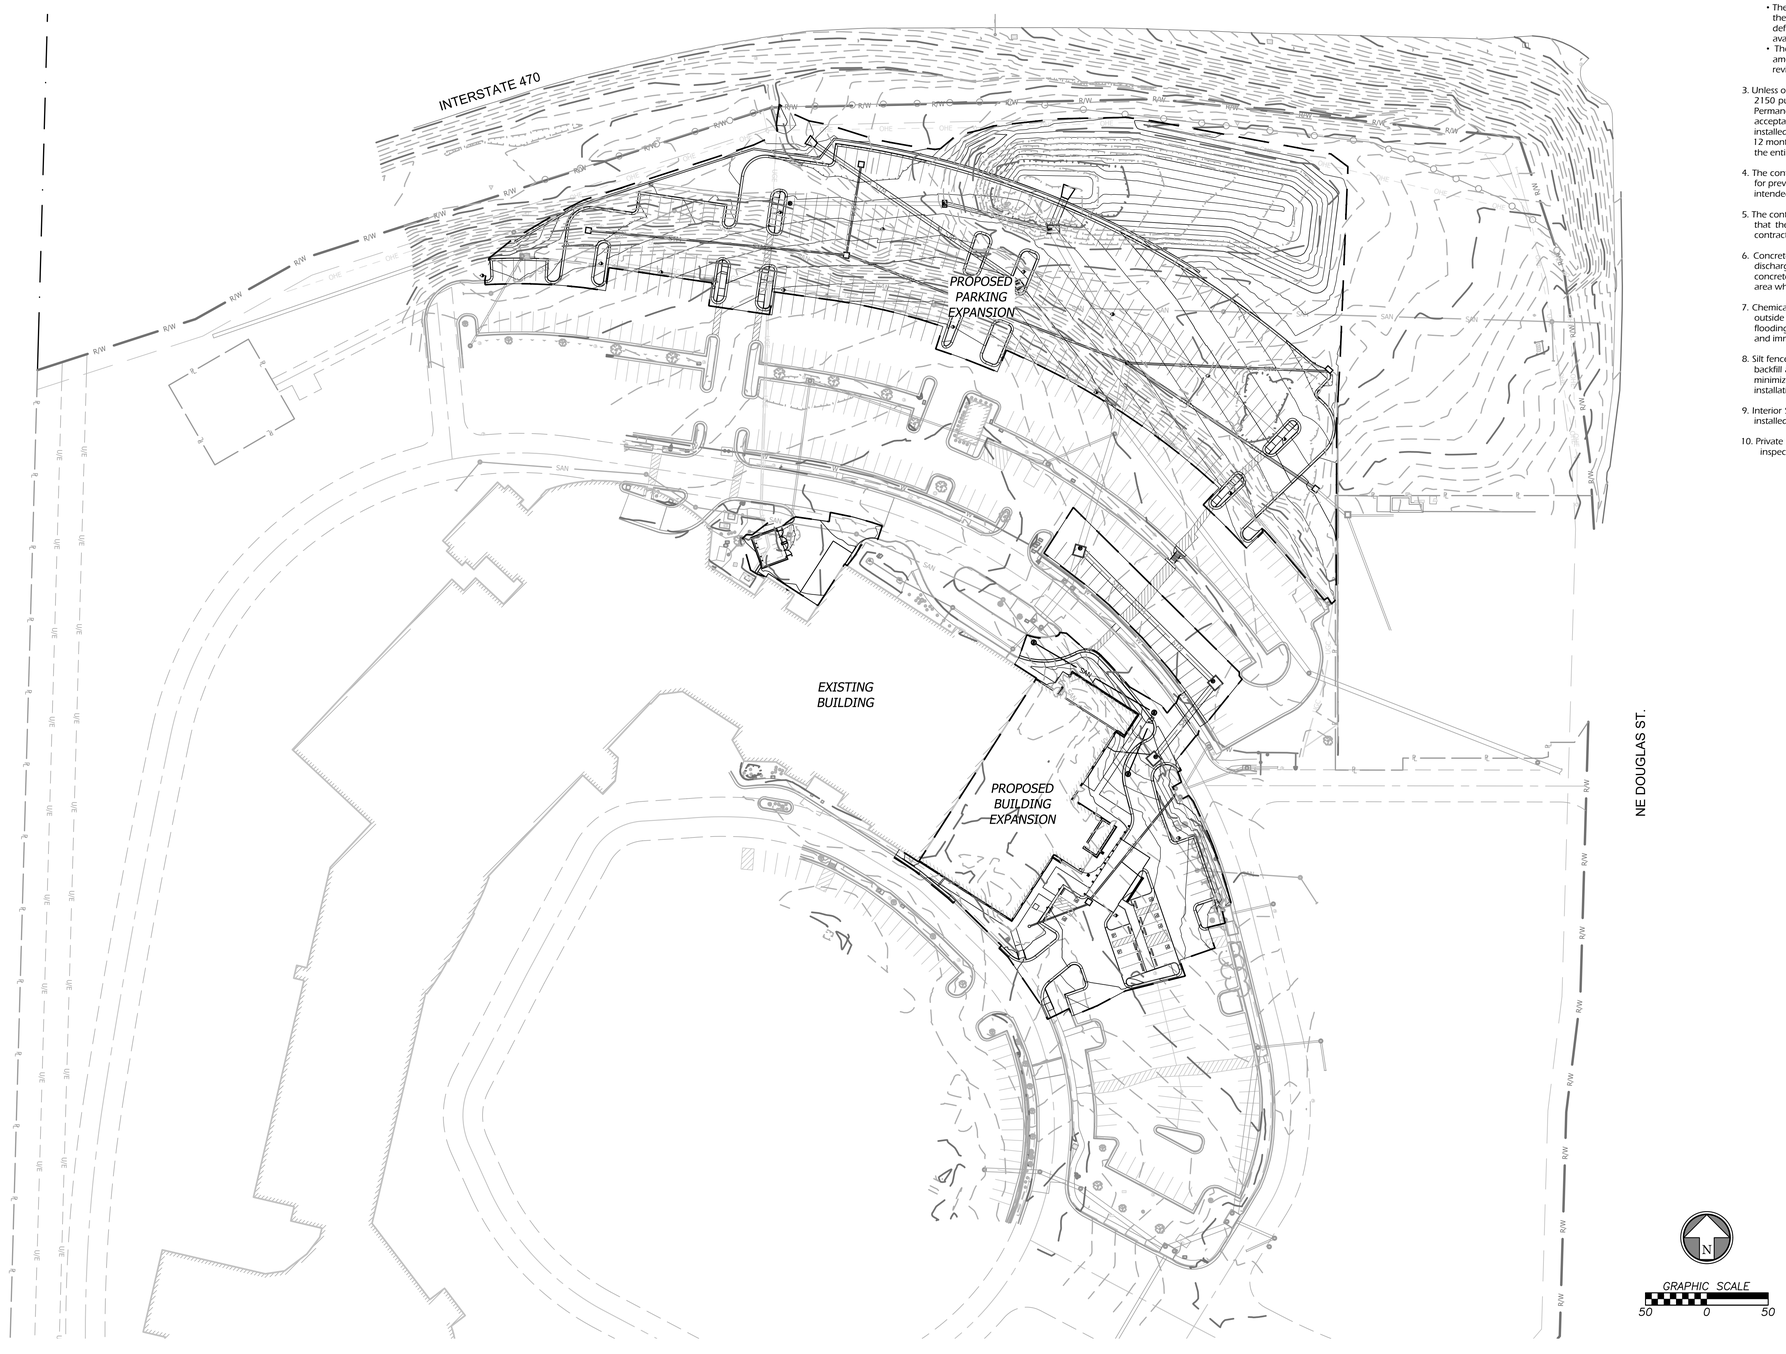
DETAILED GRADING PLAN - PARKING EXPANSION

Jan 16, 2023 - 2:41pm Posted By: kurtyoder V:\033570-st. lukes east\04-DWG\Eng\Sheet\PDP\033570-SHTS-GRAD.dwg Layout: Detl Grad Parking Exp



EROSION AND SEDIMENT CONTROL GENERAL NOTES

1. Prior to Land Disturbance activities, the contractor shall:
   - Delineate the outer limits of any natural stream corridor designated with construction fencing.
   - Install perimeter controls and request the inspection of the pre-construction erosion and sediment control measures designated on the approved erosion and sediment control plan. Land disturbance work shall not proceed until there is a satisfactory inspection.
   - Identify the limits of construction on the ground with easily recognizable indications such as construction staking, construction fencing, and placement of physical barriers or other means acceptable to the City inspector and in conformance with the erosion and sediment control plan.

2. The contractor shall comply with all requirements of the Storm Water Pollution Prevention Plan, including but not limited to:
   - The contractor shall seed, mulch, or otherwise stabilize any disturbed area where the land disturbance activity has ceased for more than 14 days.
   - The contractor shall perform inspections of erosion and sediment control measures at the following minimum intervals:
     - o During active construction phases - at least once per week
     - o During periods of inactivity - at least once per 14 days
     - o After each rainfall event of ½ inch or more - within 24 hours of the rain event
   - The contractor shall maintain an inspection log including the inspector's name, date of inspection, observations as to the effectiveness of the erosion and sediment control measures, actions necessary to correct deficiencies, when the deficiencies were corrected, and the signature of the person performing the inspection. The inspection log shall be available for review by the regulatory authority.
   - The contractor shall have the erosion and sediment control plan routinely updated to show all changes and amendments to the plan. A copy of the erosion and sediment control plan shall be kept on site and made available for review by the regulatory authority.

3. Unless otherwise noted in the plans, all seeding must conform to Division II-Construction and Materials Specification-Section 2150 published by the Kansas City Metropolitan Chapter of the American Public Works Association dated May 21, 2008. Permanent seeding shall be installed after completion of final grading except when seeding will occur outside of the acceptable seeding season as specified in Section 2150. When temporary seeding is installed, permanent seeding shall be installed at the next seeding season. Temporary seeding shall not be used as a stabilization measure for a period exceeding 12 months. The Permit will not be closed until permanent seeding has been established to a minimum of 70% density over the entire disturbed area.

4. The contractor shall maintain installed erosion and sediment control devices in a manner that preserves their effectiveness for preventing sediment from leaving the site or entering a sensitive area such as a natural stream corridor, areas of the site intended to be left undisturbed, a storm sewer, or an on-site drainage channel.

5. The contractor is responsible for providing erosion and sediment control for the duration of a project. If the City determines that the BMPs in place do not provide adequate erosion and sediment control at any time during the project, the contractor shall install additional or alternate measures that provide effective control.

6. Concrete wash or rinse water from concrete mixing equipment, tools and/or ready-mix trucks, tools, etc. may not be discharged into or be allowed to run directly into any existing water body or storm inlet. One or more locations for concrete wash out will be designated on site, such that discharges during concrete washout will be contained in a small area where waste concrete can solidify in place.

7. Chemicals or materials capable of causing pollution may only be stored onsite in their original container. Materials stored outside must be in closed and sealed water-proof containers and located outside of drainage ways or areas subject to flooding. Locks and other means to prevent or reduce vandalism shall be used. Spills will be reported as required by law and immediate actions taken to contain them.

8. Silt fences and erosion control BMPs which are shown along the back of curb must be installed within two weeks of curb backfill and prior to placement of base asphalt. Exact locations of these erosion control methods may be field adjusted to minimize conflicts with utility construction; however, anticipated disturbance by utility construction shall not delay installation.

9. Interior Silt Fence as necessary during construction. Portions may be limited as vegetation is established and hardscape is installed. Entire length may be installed at the contractor's option to aid in stabilizing slopes.

10. Private Erosion & Sediment Control inspections are required in accordance with NPDES schedule and requirements. After inspections, provide the City of Lee's Summit with reports and documentation.

Section A-A
Not to Scale

Notes for Construction Entrance:

1. Avoid locating on steep slopes, at curves on public roads, or downhill of disturbed area.
2. Remove all vegetation and other unsuitable material from the foundation area, grade, and crown for positive drainage.
3. If slope towards the public road exceeds 2%, construct a 6- to 8-inch high ridge with 3H:1V side slopes across the foundation approximately 15 feet from the edge of the public road to divert runoff from it.
4. Install pipe under the entrance if needed to maintain drainage ditches along public roads.
5. Place stone to dimensions and grade as shown on plans. Leave surface sloped for drainage.
6. Divert all surface runoff and drainage from the entrance to a sediment control device.
7. If conditions warrant, place geotextile fabric on the graded foundation to improve stability.

Maintenance for Construction Entrance:

1. Reshape entrance as needed to maintain function and integrity of installation. Top dress with clean aggregate as needed.

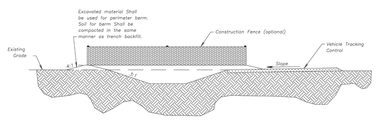
CONSTRUCTION ENTRANCE

Notes for Concrete Washout:

1. Concrete washout areas shall be installed prior to any concrete placement on site.
2. Concrete washout area shall include a flat subsurface pit sized relative to the amount of concrete to be placed on site. The slopes of the pit shall be no steeper than 2:1 (H:V). A gravel tracking pad shall be sloped towards the concrete washout area.
3. Vehicle tracking control is required at the access point to all concrete washout areas.
4. Signs shall be placed at the construction site entrance, washout area and elsewhere as necessary to clearly indicate the location(s) of the concrete washout area(s) to operators of concrete truck and if permit required.
5. A one-piece impervious liner may be required along the bottom and sides of the subsurface pit in sandy or gravelly soils.

Maintenance for Concrete Washout:

1. Concrete washout materials shall be removed once the materials have filled the washout to approximately 75% full.
2. Concrete washout areas shall be enlarged as necessary to maintain capacity for wasted concrete.
3. Concrete washout water, wasted pieces of concrete and all other debris in the subsurface pit shall be transported from the job site in a water-tight container and disposed of properly.
4. Concrete washout areas shall remain in place until all concrete for the project is placed.
5. When concrete washout areas are removed, excavations shall be filled with suitable compacted backfill and topsoil, any disturbed areas associated with the installation, maintenance, and/or removal of the concrete washout areas shall be stabilized.

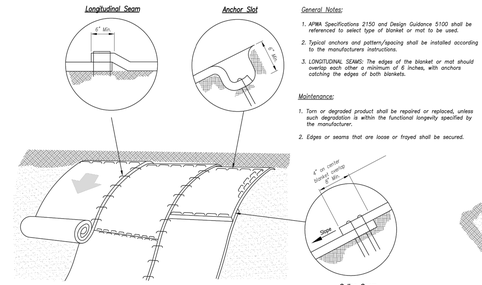


CONCRETE WASHOUT

Construction Entrance modified from 2015 Overland Park Standard Details for Erosion and Sediment Control; Concrete Washout modified from 2009 City of Great Bend Standard Drawings.

AMERICAN PUBLIC WORKS ASSOCIATION	KANSAS CITY METRO CHAPTER
CONSTRUCTION ENTRANCE AND CONCRETE WASHOUT	STANDARD DRAWING NUMBER ESC-01
	ADOPTED: 10/24/2016

601
Not to Scale
Temporary Construction Entrance and Concrete Washout

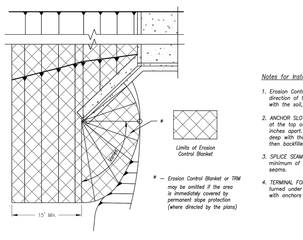


General Notes:

1. APWA Specifications 2150 and Design Guidance 5100 shall be referenced to select type of blanket or mat to be used.
2. Typical anchors and pattern/spacing shall be installed according to the manufacturers instructions.
3. LONGITUDINAL SEAMS: The edges of the blanket or mat should overlap each other a minimum of 6 inches, with anchors catching the edges of both blankets.

Maintenance:

1. Torn or degraded product shall be repaired or replaced, unless such degradation is within the functional longevity specified by the manufacturer.
2. Edges or seams that are loose or frayed shall be secured.



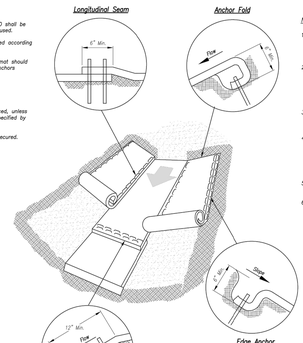
Partial Box Culvert Plan
Not to Scale

* – Erosion Control Blanket or TRM may be omitted if the area is immediately covered by permanent slope protection (where directed by the plans)

Installation Around Culvert Slope

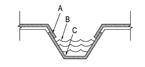
Notes for Installation on Slopes:

1. Erosion Control Blankets and TRMs shall be laid in the direction of the slope. In order for blanket to be in contact with the soil, lay blanket loosely, avoiding stretching.
2. ANCHOR SLOTS: The top of the blanket should be "slotted in", at the top of the slope and anchored in place with anchors 6 inches apart. The slots should be 6 inches wide x 6 inches deep with the blanket anchored in the bottom of the slot, then backfilled, tamped and seeded.
3. SPLICE SEAM: When splices are necessary, overlap end a minimum of 6 inches in direction of water flow. Stagger splice seams.
4. TERMINAL FOLD: The bottom edge of the blanket shall be turned under a minimum of 4 inches, then anchored in place with anchors 9 inches apart.

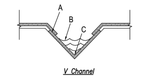


Notes for Installation in Channels:

1. Erosion Control Blankets and TRMs shall be laid in the direction of the flow, with the first course at the centerline of channel, where applicable. In order for the mat to be in contact with the soil, lay the mat loosely, avoiding stretching.
2. ANCHOR FOLD: The top of the mat should be folded under, buried and secured with wood or other approved anchors placed 6 inches apart. The top edge of the mat should be placed in a slot 6 inches wide x 6 inches deep, anchored in the bottom of the slot, backfilled, and the mat folded over the top as shown in detail.
3. SPLICE SEAM: When splices are necessary, overlap end a minimum of 12 inches in direction of water flow. Stagger splice seams.
4. CHECK SLOTS: Establish check slots transverse to slope every 30 feet. The slots should be 6 inches wide x 6 inches deep. The mat shall be cut to a length 12 inches beyond the slot. The top of the downstream mat shall be slotted in, secured and buried similar to the edge anchor fold. The upstream mat shall then cover the slot and be anchored as shown.
5. EDGE ANCHORS: Lay outside edge of mat into trench at top of the slope and anchor.
6. TERMINUS: The bottom edge of the mat shall be anchored.



Trapezoidal Channel



V Channel

Critical Points:

A – Overlaps and seams;

B – Projected water line;

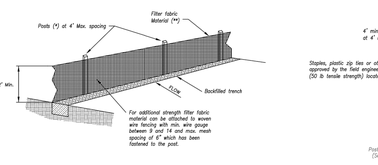
C – Channel bottom / side slope vertices;

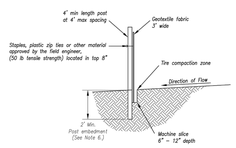
Installation in Channels

Modified from 2015 Overland Park Standard Details for Erosion and Sediment Control.

AMERICAN PUBLIC WORKS ASSOCIATION	KANSAS CITY METRO CHAPTER
EROSION CONTROL BLANKETS AND TURF REINFORMENT MATS	STANDARD DRAWING NUMBER ESC-02
	ADOPTED: 10/24/2016

602
Not to Scale
Steep Slope Protection





(*) POSTS
– MIN. LENGTH 4'
– HARDWOOD 1 ½" x 1 ½"
– NO.2 SOUTHERN PINE 2 ¼" x 2 ¼"
– STEEL 1.33 LB/FT

(**) – Geotextile Fabric shall meet the requirements of AASHTO M288

Notes:

1. In order to contain water, the ends of the silt fence must be turned uphill (Figure A).
2. Long perimeter runs of silt fence must be limited to 100'. Runs should be broken up into several smaller segments to minimize water concentrations (Figure A).
3. Long slopes should be broken up with intermediate rows of silt fence to slow runoff velocities.
4. Attach fabric to upstream side of post.
5. Install posts a minimum of 2' into the ground.
6. Trenching will only be allowed for small or difficult installation, where sliicing machine cannot be reasonably used.

Maintenance:

1. Remove and dispose of sediment deposits when the deposit approaches ½ the height of silt fence.
2. Repair as necessary to maintain function and structure.

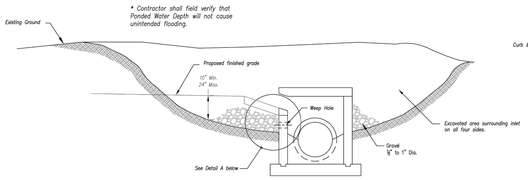
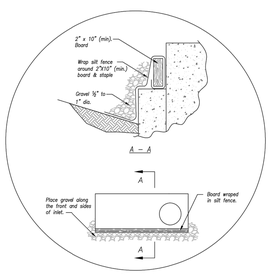
Silt Fence





Detail A

EARLY STAGE CURB INLET
(Open Box and Prior to Pouring Curb and Inlet Throat)

Notes:

1. Immediately following inlet construction and prior to construction of curb and inlet throat, protect inlet opening by installing 2" X 10" (min.) board wrapped in silt fence. Structures shall have excavated storage area on all four sides to allow settling of sediment (Early Stage Curb Inlet).
2. When inlet is completed and curb poured, filter socks or approved equal should be used (Late Stage Curb Inlet). Straw wattles are not approved for curb inlet use.
3. Contractor to field verify ponding water shall not create a traffic hazard.

Maintenance:

1. Remove deposited sediment from excavated storage area when available storage has been reduced by 20%.
2. Remove deposited sediment from filter socks or similar when any accumulation of sediment is visible.
3. Repair or replace as necessary to maintain function and integrity of installation.

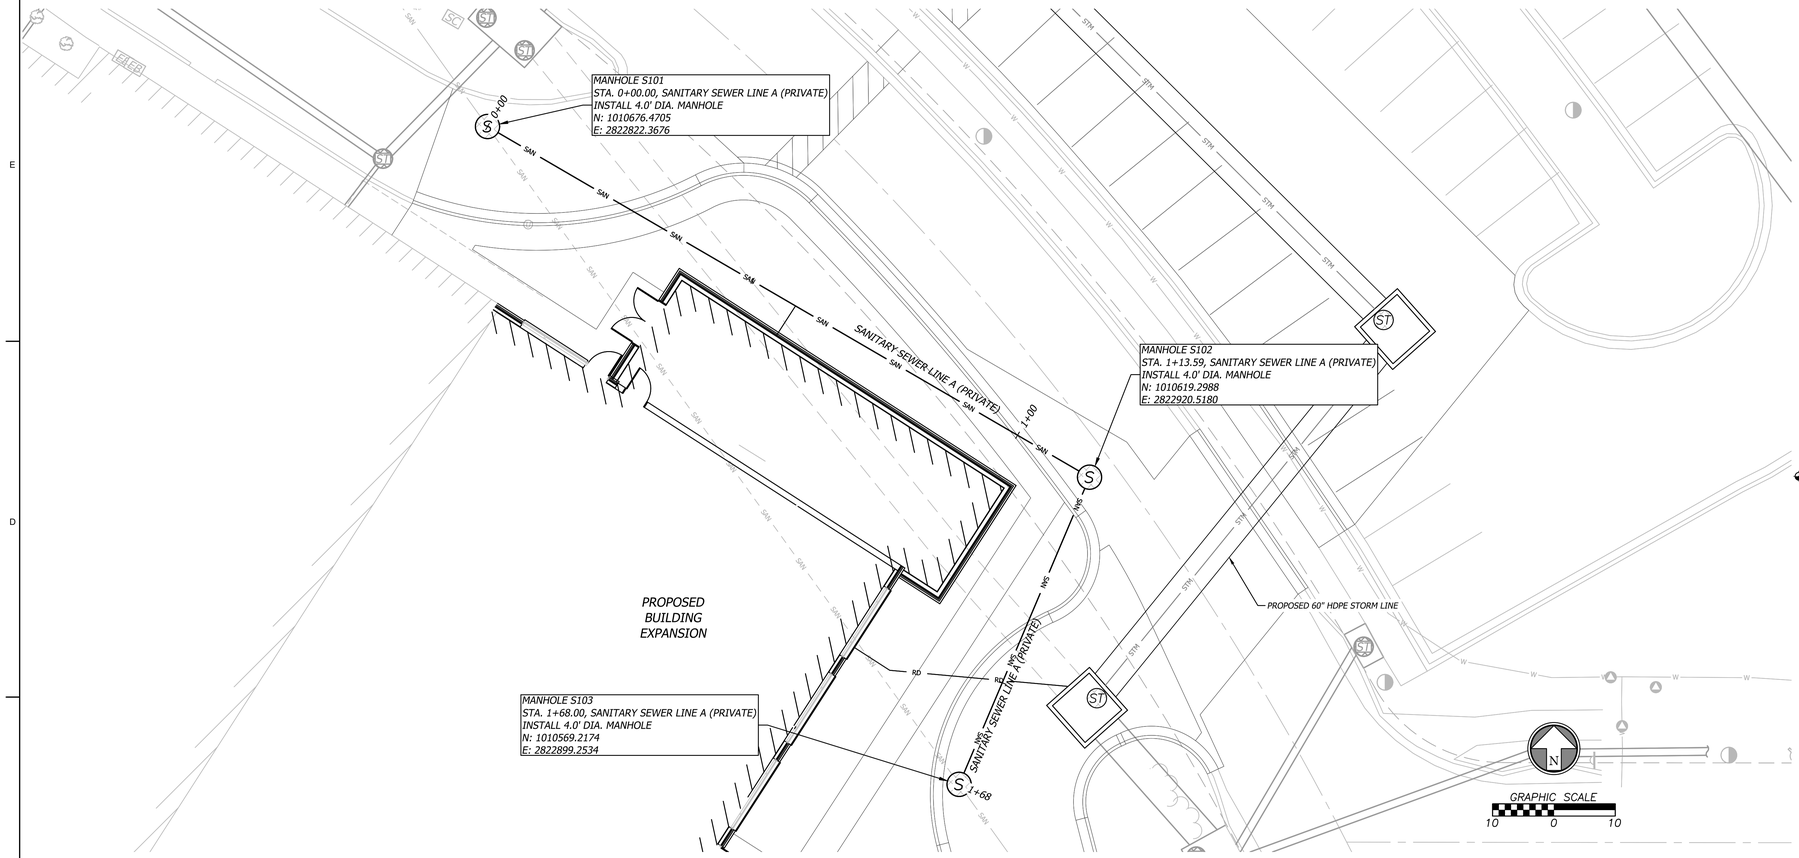
OVERALL UTILITY PLAN

Jan 20, 2023 - 11:42am Plotted By: kurtyoder V:\033570-st. lukes east\04-DWG\Eng\Sheet\PDP\033570-SHTS-UTIL.dwg Layout: UTI Plan



SANITARY SEWER MAIN NOTES

1. Construction of the sanitary sewer main shall follow the standards set forth in the City of Lee's Summit's Standard Specifications.
2. All sewer main lines shall be Polyvinyl Chloride pipe (PVC) SDR-26.
3. Sewer lateral shall be 6" PVC, SDR-26. Laterals shall be located at points shown on the plans, or designated by the Engineer, and shall be constructed to the easement line or as noted on the plans.
4. Only those fittings specifically made for PVC pipe shall be used. Material specifications for fittings are outlined in the City of Lee's Summit's Standard Specifications, section 3500.
5. All sanitary sewers with slopes greater than 20% shall have concrete collars.
6. For minimum clearance of water line over and adjacent to sewer line: 10' horizontal separation, 18" vertical separation. If this cannot be maintained, sanitary sewer main material shall be ductile iron for at least 10 ft on each side of the crossing.
7. All testing shall be conducted by the contractor in the presence of the city inspector.
8. Lengths of pipe shown are center-of-structure to center-of-structure. Northings and Eastings shown for manholes are to center-of-structure.
9. The contractor shall submit shop drawings on all precast structures, pipes, and any materials to be used on this project for approval by the design engineer.
10. The entire proposed sanitary sewer to be constructed by these plans shall be successfully tested for watertightness as outlined in section 3500 of the current City of Lee's Summit's Standard Specifications.

BENCHMARKS (DATUM: NAVD88)

SANITARY PLAN & PROFILE

Jan 16, 2023 - 2:45pm Plotted By: kurt.yoder V:\033570-st. lukes east\04-DWG\Eng\Sheet\PDP\033570-SHTS-SSWR.dwg Layout: San 100 Plan & Profile

SOLID STATE AREA LIGHTING

GALAXY2 SERIES-LED

S P E C I F I C A T I O N S

HOUSING
Heavy cast low copper aluminum assembly (A356 alloy, <0.2% copper). Minimum wall thickness is .188". Housing provided with True Level™ arm system to connect to arm assembly. All exposed hardware is stainless steel. Internal protected hardware is electro-zinc plated.

✓LED® OPTICAL MODULE
Low copper A356 alloy (<.2% copper) cast aluminum housing. Integrated clear tempered 3/16" glass lens sealed with a continuous silicone gasket protects emitters (LED's) and emitter Reflector-Prism optics, and seals the module from water intrusion and environmental contaminants. LED's are available in standard Neutral White (4000K), or optional Cool White (5000K) or Warm White (3000K). Each emitter is optically controlled by a Reflector-Prism injection molded from H12 acrylic (3 types per module; one from 0° - 50°; one from 50° - 65°; one from 65° - 72°). Each Reflector-Prism has indexing pins for aiming and is secured to an optical plate made of matte black anodized aluminum. The optical plate locates every Reflector-Prism over an emitter. Reflector-Prisms are secured to the optical plate with a UV curing adhesive. The Reflector-Prisms are arrayed to produce IES Type II, III, IV, and V-SQ distributions. The entire Optical Module is field rotatable in 90° increments. Both module and drivers are factory wired using water resistant, insulated cord. Lens, module and drivers are field replaceable.

LED EMITTERS
High Output LED's are driven at 350mA for nominal 1 Watt output each or 525mA for nominal 1.5 Watt output each. LED's are available in standard Neutral White (4000K), or optional Cool White (5000K) or Warm White (3000K). Consult Factory for other LED options.

LED DRIVER
UL and CUL recognized High Power Factor, Constant Current LED drivers operate on input voltages from 120-277VAC, 50/60hz. Consult Factory for 347-480VAC. Driver is mechanically fastened to a retaining bracket. Main power quick disconnect provided. Driver has a minimum 4KV of internal surge protection, 10KV & 20KV Surge Protector optional. Dimming and High-Low Driver options available.

FINISH
Electrostatically applied TGIC Polyester Powder Coat on substrate prepared with 20 PSI power wash at 140°F. Four step iron phosphate pretreatment for protection and paint adhesion. 400°F bake for maximum hardness and durability. Texture finish is standard.

OVERALL DRAINAGE MAP

Jan 16, 2023 - 2:43pm Plotted By: kurtyoder V:\033570--st. lukes east\04--DWG\Eng\Sheet\PDP\033570--SHTS-DMAP.dwg Layout: Overall Drainage Map

STORM NOTE

1. Pipe lengths shown are measured from center of structure or to the end of end section. All pipes shall be field staked to the inside wall face of the structure.
2. Utility lines and structures in fill areas below pipe grade shall not be constructed until all consolidation of the fill is complete and so approved by the on-site Geotechnical engineer.
3. All pipe shall be placed in trench conditions. Place a minimum of 18 inches of fill over proposed pipe before trenching and pipe installation. Proposed fill shall be placed in accordance with project requirements.
4. The dimensions for all structures are from inside face of structure to inside face of structure.
5. All curb inlets and other structures set at low points are to be set level. All other curb inlets are to be set with the grade of the top of curb or pavement.
6. Precast structures may be used at contractor's option. All storm structures shall have a smooth uniform poured concrete invert from invert in to invert out.
7. The lids of all precast structures shall be grouted to the top of the walls.
8. Northing, eastings, and alignment stationing shown are center of structure or to end of end section.
9. The first dimension shown is the "L" dimension and the second is the "W" dimension on rectangular structures. See details.
10. All HDPE pipe shall be ADS N-12, or approved equal, meeting AASHTO M294, type S or ASTM F2306. The pipe shall have a smooth interior and annular exterior corrugations. Pipe joints shall be jointed using a bell & spigot joint meeting AASHTO M252, AASHTO M294 or ASTM F2306.The joint shall be watertight according to the requirements of ASTM D3212 and gaskets shall meet the requirements of ASTM F477. Gaskets shall be installed by the pipe manufacturer and covered with a removable wrap to ensure the gasket is free from debris. A joint lubricant supplied by the manufacturer shall be used on the gasket and bell during assembly.
11. Fittings for plastic pipe shall conform to AASHTO M252, AASHTO M294, or ASTM F2306. All wyes shall be dual wall wyes consistent with the ADS N-12 pipe watertight connections.
12. All RCP pipe shall be Class III per ASTM C-76, with "o-ring" or single offset, rubber gasketed joint.

DETENTION BASIN PLAN

Jan 16, 2023 - 2:44pm Plotted By: kurt.yoder V:\033570--st. lukes east\04--DWG\Eng\Sheet\[DP\033570--SHTS--POND.dwg Layout: Detention Basin Plan

SECTION 32 32 16
PRECAST MODULAR BLOCK RETAINING WALL

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes: Furnishing materials and labor required for the design and construction of a ReCon precast modular block retaining wall.
B. Related Sections:
   1. Section 312000 Earth Moving

1.2 REFERENCES

A. Precast Modular Block Units:
   1. ASTM C-33 Specification for Concrete Aggregates
   2. ASTM C-39 Test Method for Compressive Strength of Cylindrical Concrete Specimens
   3. ASTM C-94 Specification for Ready-Mixed Concrete
   4. ASTM C-138 Test Method for Density (Unit Weight), Yield, and Air Content (Gravimetric) of Concrete
   5. ASTM C-143 Test Method for Slump of Hydraulic-Cement Concrete
   6. ASTM C-260 Specification for Air-Entraining Admixtures for Concrete
   7. ASTM C-494 Specification for Chemical Admixtures for Concrete
   8. ASTM C1611 Test Method for Slump Flow of Self-Consolidating Concrete
   9. ASTM C-1776 Standard Specification for Wet-Cast Precast Modular Block Retaining Wall Units
B. Drain Pipe:
   1. ASTM D-3034 Standard Specification for Type PSM (Vinyl Chloride) (PVC) Sewer Pipe and Fittings
   2. ASTM F-2648 Standard Specification for 2 to 60 inch [50 to 1500 mm] Annular Corrugated Profile Wall Polyethylene (PE) Pipe and Fittings for Land Drainage Applications
C. Geosynthetics:
   1. ASTM D-4595 Tensile Properties of Geotextiles - Wide Width Strip
   2. ASTM D-4873 Standard Guide for Identification, Storage and Handling of Geosynthetics
   3. ASTM D-5262 Unconfined Tension Creep Behavior of Geosynthetics
   4. ASTM D-5321 Standard Test Method for Determining the Coefficient of Soil and Geosynthetic or Geosynthetic and Geosynthetic Friction by the Direct Shear Method
   5. ASTM D-5818 Standard Practice for Obtaining Samples of Geosynthetics from a Test Section for Assessment of Installation Damage
   6. ASTM D-5970 Standard Test Method for Deterioration of Geotextiles from Outdoor Exposure
   7. ASTM D-6637 Standard Test Method for Determining Tensile Properties of Geogrids by the Single- or Multi-Rib Tensile Method
   8. ASTM D-6638 Standard Test Method for Determining Connection Strength Between Geosynthetic Reinforcement and Segmental Concrete Units
   9. ASTM D-6706 Standard Test Method for Measuring Geosynthetic Pullout Resistance in Soil
D. Engineering Design:
   1. NCMA Design Manual for Segmental Retaining Walls, Current Edition
   2. AASHTO LRFD Bridge Design Specifications, Current Edition
   3. International Building Code (IBC), Current Edition
   4. Minimum Design Loads for Buildings and Structures, ASCE 7, Current Edition
E. Soils:
   1. ASTM D-422 Standard Test Method for Particle-Size Analysis of Soils
   2. ASTM D-448 Standard Classification for Sizes of Aggregates for Road and Bridge Construction
   3. ASTM D-698 Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Standard Effort (12,400 ft-lbf/f3) (600 kN-m/m3)

   4. ASTM D-1241 Standard Specification for Materials for Soil-Aggregate Subbase, Base and Surface Courses
   5. ASTM D-1556 Standard Test Method for Density and Unit Weight of Soil in Place by the Sand Cone Method
   6. ASTM D-1557 Standard Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort (56,000 ft-lbf/f3) (2700 kN-m/m3)
   7. ASTM D-2487 Standard Classification of Soils for Engineering Purposes (Unified Soil Classification System)
   8. ASTM D-3080 Standard Test Method for Direct Shear Test of Soils Under Consolidated Drained Conditions
   9. ASTM D-4318 Standard Test Methods for Liquid Limit, Plastic Limit, and Plasticity Index of Soils
   10. ASTM D-4767 Test Method for Consolidated-Undrained Triaxial Compression Test for Cohesive Soils
   11. ASTM D-6938 Standard Test Methods for In-Place Density and Water Content of Soil and Soil-Aggregate by Nuclear Methods (Shallow Depth)
   12. ASTM D-G51 Standard Test Method for Measuring pH of Soil for Use in Corrosion Testing
F. ReCon Construction Detail Drawings: www.reconwalls.com

1.3 DEFINITIONS

A. ReCon Retaining Wall Unit: Concrete, modular facing block provided by an authorized manufacturer under license to ReCon Retaining Wall Systems, Inc.
B. Geogrid: A geosynthetic material manufactured of high tensile materials specifically for the purpose of reinforcing and creating a structural soil mass.
C. Drainage Aggregate: Clean, crushed rock located within and immediately behind ReCon units to facilitate drainage and avoid compaction in close proximity to ReCon wall units.
D. Reinforced Soil: Soil zone extending from the Drainage aggregate zone to the back of the embedded geogrid.
E. Foundation Soil: Soil zone immediately beneath the retaining wall facing units, the wall leveling pad and the reinforced soil zone.
F. Retained Soil: Soil immediately behind retaining wall facing and drainage aggregate for modular gravity structures or behind the reinforced soil for wall that utilize geogrid.
G. Construction Drawings: Approved final plan for construction prepared and stamped by the wall design engineer licensed to practice in the state where the retaining wall is located.

1.4 Submittals

A. Contractor shall submit Manufacturer's product data and installation instructions for approval.
B. Contractor shall submit Manufacturer's test reports certifying that the ReCon units manufactured at their production facility meet the requirements of this specification and the requirements of the Construction Drawings.
C. Unless provided within these project documents and/or the project drawings, contractor shall submit two sets of the Construction Drawings for all ReCon retaining walls on the project.
   1. The design shall be prepared by a Professional Engineer licensed to practice in the state where the retaining wall is located.
   2. The design shall be per NCMA Design Guidelines for Segmental Retaining Walls, or the AASHTO Standard Specifications for Highway Bridges, whichever is applicable as determined by the retaining wall design engineer.
   3. Construction Drawings shall include:
      a. The retaining wall layout and retaining wall heights.
      b. Proper placement, lengths and types of geogrid reinforcement where necessary.
      c. Typical wall sections.

      d. Types, locations and properties of all drainage materials, appurtenances and special installation requirements not covered in this specification.
      e. Retaining wall elevation views.
      f. Any soils information or testing conducted in addition to that included within the project drawings and specifications.
      g. Design assumptions.
D. If geogrid reinforcement is required in the final engineered construction drawings, submit manufacturer's product literature, product testing reports and a twelve inch or larger sample of each type to be used in wall construction.
E. Submit gradation reports for aggregates used for the wall leveling pad, unit / drainage fill and for select reinforced fill if required in the final engineered wall design.
F. All submittals must be provided and reviewed prior to the start of retaining wall construction.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Contractor shall inspect all products at delivery to determine that the proper materials have been delivered and are usable. Damaged material shall not be incorporated into the work.
B. ReCon retaining wall units shall be stored in a location and manner that protects against excessive weathering and damage.
C. Contractor shall prevent ReCon units from excessive soiling and coming in contact with substances which may stain or adhere to the finished visual surfaces of the unit.
D. Faces of the ReCon Block shall be free of excessive chipping, cracking and stains.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: Contractor shall have successfully installed at least three projects similar to that of this project within the last two years. Contractor shall maintain at least one mechanic on site at all times that worked on one or more of these previous installations.
B. Owner shall employ the services of an independent geotechnical or materials engineering firm to provide soil testing and quality assurance inspection for wall construction and soils work. Contractor shall provide any quality control testing or inspection not provided by the Owner.
C. Retaining Wall Design Engineer Qualifications: The Retaining Wall Design Engineer shall be licensed to practice in the state in which the project located. Additionally, the Retaining Wall Design Engineer shall be independently capable of performing all retaining wall analysis calculations (internal and external stability, seismic analysis, water analysis, and global stability) and have designed at least three wall projects similar to that of this project.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Only licensed and authorized manufacturers of:
   1. ReCon Wall Systems, Inc.
      7600 West 27th St., #229
      St Louis Park, MN 55426
      (952) 922-0027 Phone
      (952) 922-0028 Fax
      www.reconwalls.com

2.2 MATERIALS

A. ReCon retaining wall units.
   1. The block unit shall consist of concrete with the average 28-day compressive strength of no less than 4000 psi.

   2. Concrete shall have air entrainment by volume (as measured in the plastic state in accordance with ASTM C172) of:
      a. 5.5 – 8.5 percent, or
      b. In conformity with ASTM C94, latest revision.
   3. Exterior dimensions of the face shall be 48-inches by 16-inches for full and corner unit, and 24-inches by 16-inches for half unit.
   4. Depth of unit should be as per Construction Drawings and is available in depths from 24-inches up to 84-inches (dimensions in inches: 24, 39, 45, 60, 66, 72, 78, 84).
   5. ReCon Units used shall maintain tolerances of:
      a. Height: +/- 3/16-inch
      b. Width: +/- 1/2-inch unless field cut for fitting purposes.
      c. Depth: No less than the unit design depth (i.e. 24-inch, 39-inch, etc.) with the textured face portion of the block is considered as 4-inches
   6. Special shape units should be obtained and used where indicated on the final engineered construction drawings. Reference ReCon Drawing #101 for overview of standard unit types.
   7. ReCon Unit Face Texture
      a. Shall be "North Shore Granite"
B. Geogrid Reinforcement: Geosynthetic reinforcement shall be high tensile geogrid or geotextile manufactured specifically for soil reinforcement applications.
   1. Construction Drawings shall indicate the type, strength, location and lengths of reinforcement used.
   2. The geosynthetic manufacturer shall provide all relevant testing to the wall design engineer for incorporation in the wall design and shall be included in the submittal for the Construction Drawings.
   3. No substitutions of geosynthetic shall be allowed that was not evaluated in the Construction Drawings.
C. Base Leveling Pad: The wall base leveling pad material shall consist of a compacted crushed stone base or non-reinforced concrete as indicated in the Construction Drawings.
D. Drainage Aggregate: Drainage aggregate shall consist of clean 3/4" crushed stone or gravel meeting the requirements of the Construction Drawings.
E. Reinforced Soil: All reinforced soil, borrow or imported, shall meet all requirements of the Construction Drawings. Reinforced soils, by gradation, shall have no more than 35 percent passing the number 200 sieve for walls less than 20-feet in height and no more than 15 percent passing the number 200 sieve for walls greater than 20-feet in height.
F. Drainage Pipe: If required in Construction Drawings, drainage pipe shall be perforated or slotted PVC pipe manufactured in accordance with ASTM D-3034 or ASTM D-2412. Drainage pipe may also be covered with a geotextile filter fabric.
G. Unit Adhesive: Adhesive shall be a premium, construction grade suitable for concrete and exterior applications.

2.3 FINISHES

A. ReCon retaining wall color
   1. Finished wall shall be left in natural (as-cast) color.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify locations of utilities and existing structures prior to excavation.
B. Examine the Project site and evaluate conditions where the ReCon retaining wall will be constructed. Notify the proper supervising authority in writing of any conditions that may interfere with the proper construction of the ReCon wall or delay completion.
C. Promptly notify the wall design engineer of site conditions which may affect wall performance, soil conditions observed other than those assumed, or other conditions that may require a reevaluation of the wall design.

3.2 EXCAVATION

A. Contractor shall excavate to the lines and grades shown on the construction drawings. The contractor shall be careful not to disturb the base beyond the lines indicated.
B. Foundation soils shall be excavated as required for footing base / leveling pad dimensions shown on the construction drawings, or as directed by the wall engineer.
C. Over-excavated areas shall be filled with suitable base or backfill material and compacted to 95 percent standard proctor.

3.3 FOUNDATION SOILS PREPARATION

A. Foundation soils shall be evaluated by a Geotechnical Engineer or Owners Representative to ensure that the bearing soils meet or exceed the design conditions or assumptions.
B. Compact foundation soil zone to 95 percent standard proctor prior to installing base / leveling pad.

3.4 BASE / LEVELING PAD

A. Base shall be located as indicated on the Construction Drawings and shall have a minimum thickness of 6-inches. Base materials are to be as specified by the wall engineer (generally crushed stone, 3/4-inch minus, or similar).
B. Width of the base pad must extend a minimum of 6-inches in front and 6-inches in back of the ReCon Base Block footprint.
C. Base material shall be compacted so as to provide a smooth, hard surface on which to place the first course of units.
D. Compact base material to 95 percent of standard proctor.
E. Base shall be prepared to ensure full contact of the wall unit with base material. Spacing or gaps between units shall no exceed 1/2-inch.
F. Contractor may elect to substitute a portion of the specified granular base materials with a lean, unreinforced concrete topping.
G. When a reinforced footing is required by the Construction Drawings, it shall be located below the frost line.

3.5 UNIT INSTALLATION

A. First course of units shall be Base Block units and shall be placed in full contact with the base material.
B. Check units for level from side-to-side, front to back, and check to maintain unit batter front-to-back.
C. Place unit faces in contact side to side and avoid any gaps greater than 1/2-inch.
D. Fill and compact fill to grade in front of embedded units prior to compaction behind the wall units.
E. Fill voids between ReCon units with 3/4-inch clean crushed rock to a distance of one foot behind the unit depth unless otherwise instructed in the Construction Drawings.
F. Sweep and clean the top of each course before setting additional courses.
G. Lay each successive course making sure that the bottom recess is in full contact with the unit locators of the course below. Pull unit forward as far as possible. Backfill and compact soil behind the units.
H. Check and maintain level and wall batter by use of shims when necessary.
I. Follow ReCon recommended procedures to maintain acceptable running bond when constructing curved walls and / or corners. Build in accordance with Construction Drawings or ReCon Construction Detail Drawings.
J. Handle units with proper lifting devices that have been certified for the loads associated with the weights of the units. Avoid applying forces to the lifting loops in excess of the normal force associated with the weight of the unit (i.e., avoid dynamic loads from bouncing or swinging of a unit). If the unit is to be transported over a significant distance in the field, it is recommended that a CABLE be used in lieu of a chain.

3.6 GEOGRID INSTALLATION

A. Install geosynthetic reinforcement in accordance with manufacturer's recommendations and the Construction Drawings.
B. Locate geosynthetic reinforcement at elevations and to the lengths shown on the Construction Drawings.
C. Prior to installation of geosynthetic reinforcement, level and compact backfill material to the level of the reinforcement layer.
D. Reinforcement design strength direction must be oriented perpendicular to wall face.
E. Position reinforcement on ReCon units over the tongue and groove and to within 2-inches of the front exposed face. The next course of units shall be placed such that the geogrid is deformed over the tongue and groove. The next course of units must be slid forward such that the back edge of the groove on this unit is up against the back edge of the tongue on the lower unit with the geogrid pinched between the tongue and groove. Hold in place by installing the next course of units.
F. Remove all wrinkles or folds in reinforcement by pulling taut prior to backfill placement. Secure using soil staples, stakes or hand tension until reinforcement is covered with sufficient fill to maintain tensioned position.
G. Reinforcement shall be continuous throughout the embedment length. Splicing along reinforcement strength direction is not allowed.
H. Position reinforcement sections side-by-side to provide 100 percent coverage along wall face.
I. Where curved wall sections cause overlap areas in reinforcement, maintain at least 3-inches of soil between layers where overlap occurs.

3.7 REINFORCED BACKFILL PLACEMENT

A. Wall fill material shall be placed in lifts no greater than 8-inches in depth and shall be less if necessary to achieve necessary compaction.
B. Compact backfill material to 95 percent of standard proctor.
C. Only hand-operated compaction equipment shall be used within 3-feet of the back of the ReCon unit. Heavy-duty compaction equipment should be kept a minimum of 5-feet from the back of the ReCon unit to avoid wall rotation.
D. Wherever possible, backfill should be placed beginning at the face of the wall. Backfill shall be placed, spread, and compacted in a manner that minimizes the development of wrinkles, folds or movement of geogrid.
E. Tracked construction equipment shall not be operated directly on the geogrid. A minimum backfill thickness of 6-inches is required prior to operation of tracked vehicles over the geogrid. Turning of tracked vehicles should be kept to a minimum to prevent tracks from displacing the fill and damaging the geogrid.
F. Rubber tired equipment may pass over the geogrid reinforcement at slow speeds, (less than 10 MPH). Avoid sudden braking and sharp turning.
G. At the conclusion of each day's work, slope backfill at both the crest and bottom of wall away from wall face to prevent surface drainage from scouring or ponding.
H. During wall construction, the General Contractor shall be responsible for coordination of other project site operations so as to avoid adjacent construction site drainage from affecting wall construction area.
I. Upon completion of wall construction work, the General Contractor shall:
   1. Ensure finished grading directs normal drainage away from the finished wall.
   2. Ensure other trades do not operate heavy equipment or excavate near the wall and reinforced soil zone.

3.8 OTHER CONSTRUCTION DETAILS

A. ReCon provides a number of Construction Detail Drawings (see Section 1.2F) which can be found on ReCon's website (www.reconwalls.com) and should be referred to for guidance on wall specific applications.

3.9 SITE TOLERANCES

A. Straight walls
   1. Vertical Alignment: +/- 1.5-inches over any 12-feet distance and no more than +/- 3-inches over the entire length of wall.
B. Horizontal Alignment Control:
   2. Corners and radius location: +/- 1-foot to theoretical location indicated on the Grading Plan.
   3. Radii: +/- 2-feet from theoretical lines indicated on the Grading Plan.
C. Wall Batter at Completion of Work: +/- 2-degrees from the design batter and no batter less than 2-degrees.

3.10 FIELD QUALITY CONTROL

A. Contractor shall be responsible for proper installation and quality control of all ReCon wall components and appurtenant materials.
B. Owner shall, at their expense, retain a qualified professional to monitor and perform quality assurance checks of the installer's work.
C. Quality Assurance should include foundation soil inspection, frequent backfill compaction testing, verification of geotechnical design parameters and compliance with Construction Drawings and Project Specifications.

3.11 CLEANING

A. After completion of wall installation, remove construction debris and restore any adjacent finished areas affected by wall construction to their pre-construction state.
B. Wash wall face to remove soiling and stains. Do not use acid or detergents that my "burn" or discolor face.

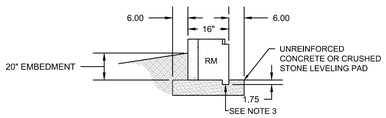
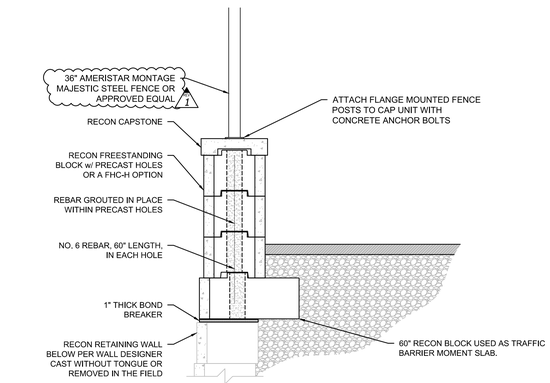
RETAINING WALL PLAN & PROFILE 2

Jan 16, 2023 - 2:45pm Plotted By: kurt.yoder V:\03570-st. lukes east\04-DWG\Eng\Sheet\[DP\03570-SHTS-WALL PLNP.dwg Layout: Plan & Profile (2)

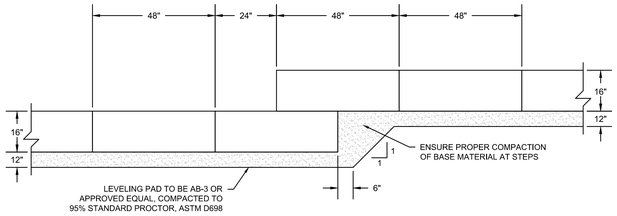


NOTES:
1. LEVELING PAD SHOULD BE AS SPECIFIED BY THE DESIGN ENGINEER IN THE PROJECT PLAN SET.
2. THE WIDTH OF THE LEVELING PAD MUST EXTEND 6" (MINIMUM) IN FRONT AND 6" (MINIMUM) IN BACK OF THE BASE BLOCK. AS A RESULT THE TYPICAL WIDTH OF LEVELING PAD WOULD BE:
   16" DEEP LIPPED BLOCK...LEVELING PAD WIDTH IS 28"
3. TRENCH A 2" WIDE, 2" DEEP CHANNEL APPROXIMATELY 6" FROM THE BACK OF THE LEVELING PAD.
4. SET THE BASE BLOCK. THE LIP WILL BE SET INTO THE 2" WIDE CHANNEL. CHECK FOR LEVEL FROM FRONT TO BACK.
5. EMBEDMENT SHOULD BE 20" MINIMUM.
6. COMPACTION TO THE SPECIFIED EMBEDMENT DEPTH SHALL BE DONE IN FRONT OF THE BASE BLOCK **BEFORE** COMPACTION IS DONE BEHIND THE BASE BLOCK. THIS REDUCES THE CHANCE THAT COMPACTION BEHIND THE BASE BLOCK WILL ROLL THE BASE BLOCK FORWARD.
7. SEE BLOCK SPECIFICATION & INSTALLATION INSTRUCTIONS FOR MORE DETAILS.

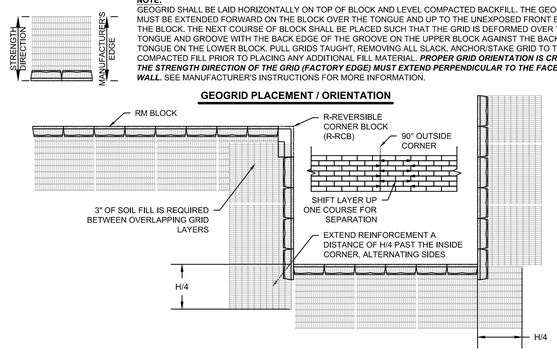
401 Not to Scale
Block Embedment



402 Not to Scale
Freestanding Block Wall/Traffic Barrier



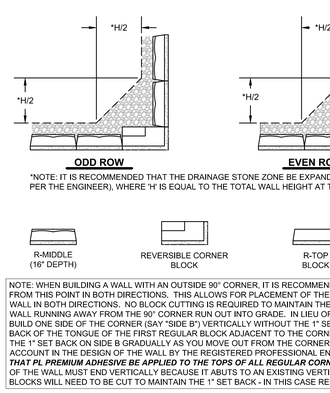
403 Not to Scale
Leveling Pad and Stepping Base



NOTE:
GEOGRID SHALL BE LAID HORIZONTALLY ON TOP OF BLOCK AND LEVEL COMPACTED BACKFILL. THE GEOGRID MUST BE EXTENDED FORWARD ON THE BLOCK OVER THE TONGUE AND UP TO THE UNEXPOSED FRONT EDGE OF THE BLOCK. THE NEXT COURSE OF BLOCK SHALL BE PLACED SUCH THAT THE GRID IS DEFORMED OVER THE TONGUE AND GROOVE WITH THE BACK EDGE OF THE GROOVE ON THE UPPER BLOCK AGAINST THE BACK OF THE TONGUE ON THE LOWER BLOCK. PULL GRIDS TAUGHT, REMOVING ALL SLACK, ANCHOR/STAKE GRID TO THE COMPACTED FILL PRIOR TO PLACING ANY ADDITIONAL FILL MATERIAL. ***PROPER GRID ORIENTATION IS CRITICAL. THE STRENGTH DIRECTION OF THE GRID (FACTORY EDGE) MUST EXTEND PERPENDICULAR TO THE FACE OF THE WALL.*** SEE MANUFACTURER'S INSTRUCTIONS FOR MORE INFORMATION.

GEOGRID PLACEMENT / ORIENTATION

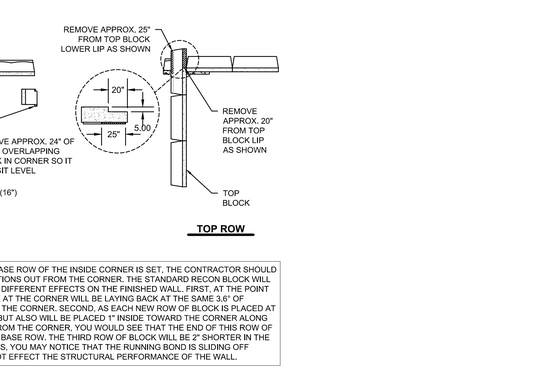
404 Not to Scale
Geogrid Installation at Corners



*NOTE: IT IS RECOMMENDED THAT THE DRAINAGE STONE ZONE BE EXPANDED IN THE CORNER TO A MINIMUM H/2 (OR GREATER AS SPECIFIED PER THE ENGINEER), WHERE 'H' IS EQUAL TO THE TOTAL WALL HEIGHT AT THE CORNER.

NOTE: WHEN BUILDING A WALL WITH AN OUTSIDE 90° CORNER, IT IS RECOMMENDED THAT CONSTRUCTION START AT THE CORNER AND EXTEND OUTWARD FROM THIS POINT IN BOTH DIRECTIONS. THIS ALLOWS FOR PLACEMENT OF THE CORNER BLOCKS SO THAT 1" OF SET BACK CAN BE MAINTAINED IN THE WALL IN BOTH DIRECTIONS. NO BLOCK CUTTING IS REQUIRED TO MAINTAIN THE 1" OF SET BACK PER ROW OF BLOCK ASSUMING THAT BOTH ENDS OF THE WALL RUNNING AWAY FROM THE 90° CORNER RUN OUT INTO GRADE. IN LIEU OF MAINTAINING THE 1" SET BACK AFTER TURNING A 90° CORNER, YOU CAN BUILD ONE SIDE OF THE CORNER (SAY 'SIDE B') VERTICALLY WITHOUT THE 1" SET BACK PER ROW OF BLOCK. THIS WILL REQUIRE YOU TO CUT 1" OFF THE BACK OF THE TONGUE OF THE FIRST REGULAR BLOCK ADJACENT TO THE CORNER BLOCK IN EACH ROW ON SIDE B OF THE WALL. YOU CAN RE-ESTABLISH THE 1" SET BACK ON SIDE B GRADUALLY AS YOU MOVE OUT FROM THE CORNER. HOWEVER, THE ELIMINATION OF THE SET BACK MUST BE TAKEN INTO ACCOUNT IN THE DESIGN OF THE WALL BY THE REGISTERED PROFESSIONAL ENGINEER. ***IN EITHER CASE, DURING INSTALLATION, IT IS RECOMMENDED THAT PL PREMIUM ADHESIVE BE APPLIED TO THE TOPS OF ALL REGULAR CORNER BLOCKS PRIOR TO INSTALLING THE NEXT ROW OF BLOCK.*** IF ONE END OF THE WALL MUST END VERTICALLY BECAUSE IT ABUTS TO AN EXISTING VERTICAL STRUCTURE OR THE WALL HAS TWO OUTSIDE 90° CORNERS, THEN BLOCKS WILL NEED TO BE CUT TO MAINTAIN THE 1" SET BACK - IN THIS CASE REFER TO DRAWING # 311.

405 Not to Scale
Outside Corner Block Installation



NOTE: IT IS RECOMMENDED WHEN BUILDING AN INSIDE 90° CORNER THAT ONCE THE BASE ROW OF THE INSIDE CORNER IS SET, THE CONTRACTOR SHOULD START EACH SUBSEQUENT ROW AT THE CORNER AND LAY THE BLOCK IN BOTH DIRECTIONS OUT FROM THE CORNER. THE STANDARD RECON BLOCK WILL SET BACK 1" FOR EACH ROW PLACED ABOVE THE BASE COURSE. THIS WILL HAVE TWO DIFFERENT EFFECTS ON THE FINISHED WALL. FIRST, AT THE POINT OF THE 90° CORNER, THE WALL WILL NOT BE VERTICAL, BUT RATHER THE ACTUAL LINE AT THE CORNER WILL BE LAYING BACK AT THE SAME 3.6° OF BATTER AS THE FACE OF EACH OF THE SIDES OF THE WALL THAT COME TOGETHER AT THE CORNER. SECOND, AS EACH NEW ROW OF BLOCK IS PLACED AT THE CORNER, THE BLOCK WILL BE SET BACK NOT ONLY 1" ALONG THE VERTICAL AXIS BUT ALSO WILL BE PLACED 1" INSIDE TOWARD THE CORNER ALONG THE HORIZONTAL AXIS. IF YOU WERE TO FOLLOW THE SECOND ROW OF BLOCK OUT FROM THE CORNER, YOU WOULD SEE THAT THE END OF THIS ROW OF BLOCK IN THE WALL IS 1" SHORTER IN THE HORIZONTAL / LINEAL DIRECTION THAN THE BASE ROW. THE THIRD ROW OF BLOCK WILL BE 2" SHORTER IN THE HORIZONTAL / LINEAL DIRECTION THAN THE BASE ROW, AND SO ON. FOR TALLER WALLS, YOU MAY NOTICE THAT THE RUNNING BOND IS SLIDING OFF CENTER BY 1" FOR EVERY OTHER COURSE. THIS IS AN AESTHETIC ISSUE AND DOES NOT EFFECT THE STRUCTURAL PERFORMANCE OF THE WALL.

406 Not to Scale
Inside Corner Block Installation

WALL AREA FOUNDATION REQUIREMENTS:

1. ALL WORK SHALL BE IN ACCORDANCE WITH THE REQUIREMENTS OF THIS PROJECT.

2. WALL AREA FOUNDATION AND SUBGRADE PAD SHALL MEET OR EXCEED THE REQUIREMENTS OF THE SPECIFICATION EXCEPT AS HEREIN NOTED ON THESE CONSTRUCTION DRAWINGS.

3. REMOVE SURFACE VEGETATION, TOPSOIL, ROOT SYSTEMS, ROCK FRAGMENTS LARGER THAN 6", ORGANIC MATERIAL, EXISTING UNSUITABLE FILL, AND SOFT OF OTHERWISE UNSUITABLE MATERIAL FROM THE WALL AREA.

4. AREAS ENCOUNTERED OF SOFT SUBGRADE SHOULD BE REMEDIATED AS DIRECTED BY GEOTECHNICAL ENGINEER.

5. AREAS EXPOSED BY EXCAVATION OR STRIPPING AND ON WHICH THE WALL SUBGRADE PREPARATIONS ARE TO BE PERFORMED SHALL BE SCARIFIED TO A MINIMUM OF 12 INCHES AND COMPACTED TO MINIMUM OF 95 PERCENT OF MAXIMUM DENSITY, IN ACCORDANCE WITH ASTM D 698, AT MOISTURE OF 0 TO 4 PERCENT BELOW OPTIMUM MOISTURE CONTENT. THE CONTRACTOR SHALL COORDINATE WITH THE TESTING LABORATORY TO CONDUCT DENSITY TESTS DURING FILL PLACEMENT AND/OR SOIL MODIFICATION AND MAKE ANY OTHER OBSERVATIONS NECESSARY TO DETERMINE THAT THE REQUIREMENT OF THE PLANS AND SPECIFICATIONS ARE BEING ACHIEVED. EXCAVATE AND RECOMPACT AREAS OF FAILURE OR UNSUITABLE SOILS AS SPECIFIED HEREIN. CONTINUAL FAILURE AREAS SHALL BE STABILIZED AND REPORTED TO THE ENGINEER.

6. FILL MATERIALS SHALL BE FREE OF ALL ORGANIC AND OTHER DELETERIOUS MATERIALS. ONLY FILL SOILS HAVING A LIQUID LIMIT LESS THAN 50 AND PLASTICITY INDEX LESS THAN 20 SHALL BE USED IN THE WALL FOUNDATION AREA. PLACE FILL MATERIALS IN THE WALL FOUNDATION AREA IN LIFTS OF LAYERS NOT TO EXCEED 6-INCHES LOOSE MEASURED AND COMPACTED TO A MINIMUM DENSITY OF 95 PERCENT OF MAXIMUM DENSITY, IN ACCORDANCE WITH ASTM D 698 AT OPTIMUM MOISTURE CONTENT ±3%.

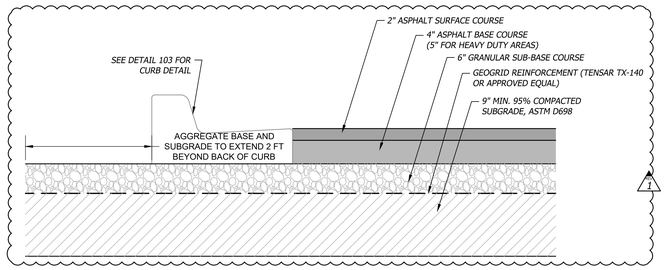
WALL DETAILS

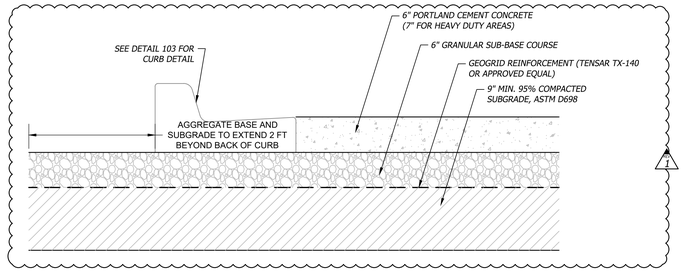
Jan 18, 2023 - 11:45am Plotted By: kurt.yoder V:\035570-st. lukes east\04-DWG\Eng\Sheet\[DP\035570-SHTS-WALL-DTLS.dwg Layout: Wall Details 1

NOTES:
1. SHOP DRAWINGS FOR ASPHALT SHALL BE SUBMITTED PRIOR TO BATCHING. DENSITY TESTING FOR ASPHALT SHALL BE AT A MINIMUM OF 3 PER LIFT PER DAY DURING THE ASPHALT LAYING OPERATION. FINAL THICKNESS OF ASPHALT SHALL BE MEASURED AT 3 RANDOM LOCATIONS WITHIN THE SITE BY CORING THE PAVEMENT. THE AVERAGE OF THESE 3 CORES MUST BE GREATER THAN THE MINIMUM THICKNESS SPECIFIED IN THE PLANS.
2. ASHPALT PAVEMENT CONSTRUCTION SHALL ONLY COMMENCE WHEN AMBIENT TEMPERATURE IS 34 DEGREES FAHRENHEIT AND RISING.
3. THICKNESS SHOWN IS MINIMUM.



100 Not to Scale — Asphalt Pavement

NOTES:
1. ALL EXTERIOR CONCRETE SHALL HAVE A BROOM FINISH.
2. 4000 PSI AT 28 DAYS, 4-INCH MAXIMUM SLUMP, AND 5%-7% AIR ENTRAINED MIX.
3. CONCRETE PAVEMENT CONSTRUCTION SHALL ONLY COMMENCE WHEN AMBIENT TEMPERATURE IS 34 DEGREES FAHRENHEIT AND RISING. COLD WEATHER PROCEDURES MAY BE UTILIZED FOR CONCRETE INSTALLATIONS WHEN TEMPERATURES ARE NOT SUITABLE FOR CONVENTIONAL PLACEMENT.
4. CONTRACTOR TO SUBMIT CONCRETE MIX DESIGN TO ENGINEER PRIOR TO PLACEMENT.
5. REFER TO JOINTING DETAILS FOR DETAILS OF CONCRETE JOINTS.



101 Not to Scale — Concrete Pavement

NOTES:
1. CONTROL JOINT SPACING SHALL MATCH WIDTH OF SIDEWALK.
2. ISOLATION JOINTS SHALL BE PLACED @ 250' CENTERS OR WHERE WALKS ABUT CURBS, BUILDINGS, ETC....
3. ALL EXTERIOR CONCRETE SHALL HAVE A BROOM FINISH.

JOINTING AND DOWEL NOTES

1. WIDTH TO LENGTH RATIO OF SLABS NOT TO EXCEED 1.25 TIMES.
2. LENGTH OF ANY PANEL TO NOT EXCEED 12.5 FEET IN PAVEMENT AREAS AND 10 FEET IN SIDEWALK AREAS.
3. SLABS WHICH DO NOT FOLLOW THE WIDTH TO LENGTH RATIO ABOVE OR ARE NOT RECTANGULAR SHALL BE REINFORCED WITH STEEL WELDED WIRE FABRIC OF THE SIZES SHOWN IN TABLE 2. OTHER WWF SIZES MAY BE USED PROVIDED THE STEEL AREA (SQ INCHES/FOOT) IN THE LONGITUDINAL AND TRANSVERSE DIRECTIONS IS EQUAL TO OR EXCEEDS THAT SHOWN IN TABLE 2.
4. EPOXY COATED DOWEL BARS SHALL BE DRILLED BY USE OF A MECHANICAL RIG. DRILLING BY HAND OR PUSHING DOWEL BARS INTO GREEN CONCRETE IS NOT ACCEPTABLE.
5. DRILLING, CLEANING, AND GROUTING SHALL BE PERFORMED PER THE EPOXY MANUFACTURER'S REQUIREMENTS FOR THIS SPECIFIC APPLICATION.
6. ASSURE SAW JOINTS ARE CLEAN AND DRY PRIOR TO THE APPLICATION OF THE JOINT SEALANT.
7. FOR EPOXY GROUT, THE HOLE DIAMETER SHALL BE NOT MORE THAN ¼" LARGER THAN DOWEL DIAMETER OR AS DIRECTED BY THE EPOXY MANUFACTURER.
8. INSTALL CLOSED CELL BACKER RODS AFTER JOINTS HAVE BEEN CLEANED AND DRIED IN ACCORDANCE WITH SEALANT MANUFACTURER'S REQUIREMENTS.
9. INSTALL BACKER ROD AT CONSISTENT AND UNIFORM DEPTH.
10. JOINT SEALANT APPLICATION SHALL BE IN STRICT COMPLIANCE WITH SEALANT MANUFACTURER'S REQUIREMENTS.
11. ALL JOINTS ALONG THE ACCESSIBLE ROUTE SHALL NOT EXCEED ½" IN WIDTH.
12. CONTRACTOR TO INSTALL BULKHEAD AND DOWEL EXPANSION JOINTS AT DAY'S END POUR.

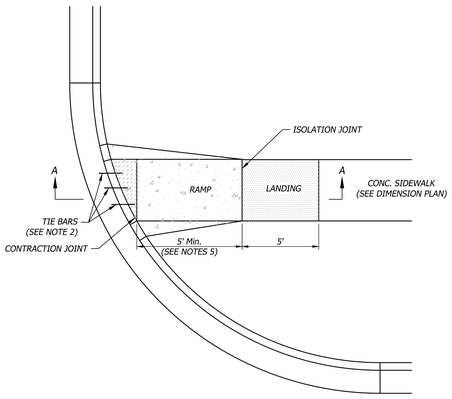
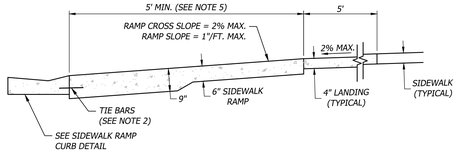
CIVIL DETAILS 1

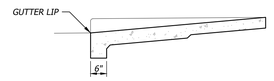
Jan 16, 2023 - 2:46pm Plotted By: kurt.yoder V:\033570-st. lukes east\04-DWG\Eng\Sheet\PDP\033570-SHTS-DTLS.dwg Layout: Civil Details 1



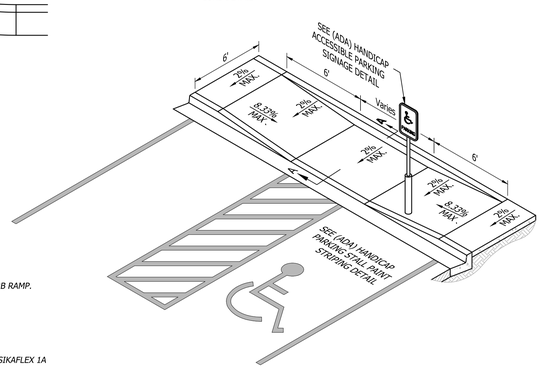
NOTES:
1. SIDEWALK RAMP LOCATION DETERMINED FROM THE INTERSECTION OF THE EXTENSION OF BACK OF SIDEWALK AND BACK OF CURB & GUTTER.
2. TIE BARS #4 EPOXY COATED @ 12"OC.
3. LONGITUDINAL JOINT SPACING TO MATCH WIDTH OF SIDEWALK.
4. ISOLATION JOINTS SHALL BE PLACED WHERE WALK ABUTS DRIVEWAYS AND SIMILAR STRUCTURES, AND 250' CENTERS MAX.
5. SIDEWALK RAMP SHALL BE LENGTHENED TO PROVIDE ADA COMPLIANCE SLOPE BUT NEED NOT EXCEED 15'.
6. ADA RAMP SLOPE MAX. = 1"/FT. ADA CROSS SLOPE MAX. = 2%.
7. SEE DETECTABLE WARNING DETAIL FOR THE INSTALLATION REQUIREMENTS.



SECTION A-A

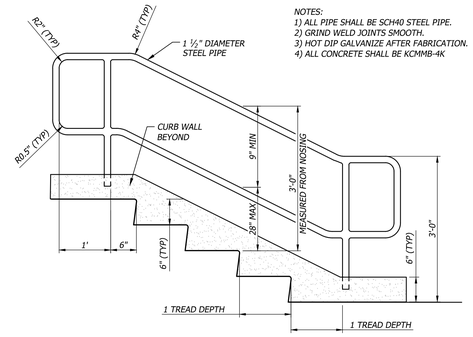


SECTION A-A
MONOLITHIC CURB & SIDEWALK



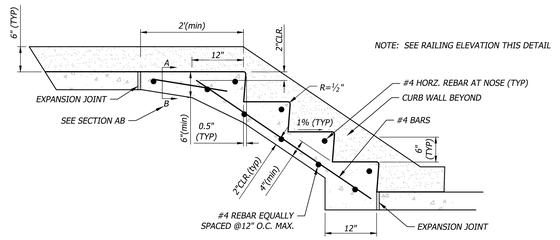
GENERAL NOTES:
1. PLACE TRUNCATED DOME DETECTABLE WARNING PANELS @ BASE OF CURB RAMP. INSTALL ACROSS FULL WIDTH OF RAMP 24"MIN. DEPTH.
2. TOOLED JOINTS ARE REQUIRED AT ALL SIDEWALK RAMP SLOPE BREAKS.
3. THICKEN CONCRETE UNDER DETECTABLE WARNING PANEL.
4. IN FREEZE THAW ZONES, LEAVE $\frac{3}{16}$" GAP IN BETWEEN PANELS & SEAL W/ SIKAFLEX 1A SEALANT OR APPROVED EQUAL.

106 Not to Scale — Sidewalk Ramp



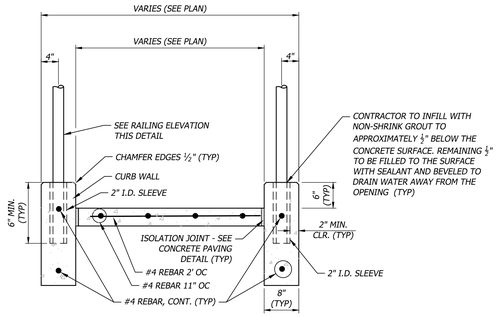
NOTES:
1) ALL PIPE SHALL BE SCH40 STEEL PIPE.
2) GRIND WELD JOINTS SMOOTH.
3) HOT DIP GALVANIZE AFTER FABRICATION.
4) ALL CONCRETE SHALL BE KCMMB-4K

HANDRAIL ELEVATIONS



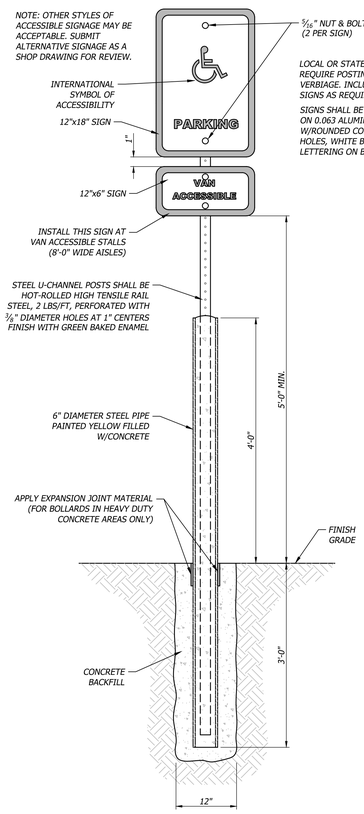
NOTE: SEE RAILING ELEVATION THIS DETAIL

SECTION



SECTION A-B

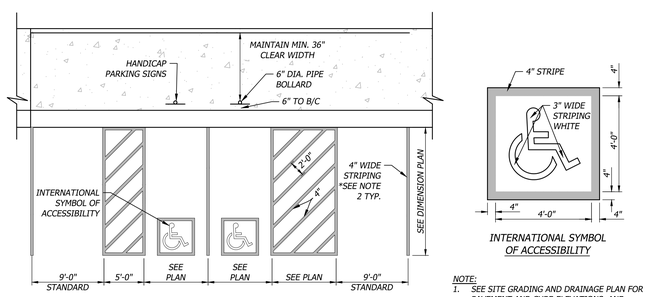
107 Not to Scale — Concrete Stair & Handrail



LOCAL OR STATE REGULATIONS MAY REQUIRE POSTING OF FINES OR OTHER VERBIAGE. INCLUDE VERBIAGE ON SIGNS AS REQUIRED.

SIGNS SHALL BE BAKED ENAMEL ON 0.063 ALUMINUM SHEETING W/ROUNDED CORNERS, TWO MOUNTING HOLES, WHITE BORDER, SYMBOL & LETTERING ON BLUE BACKGROUND

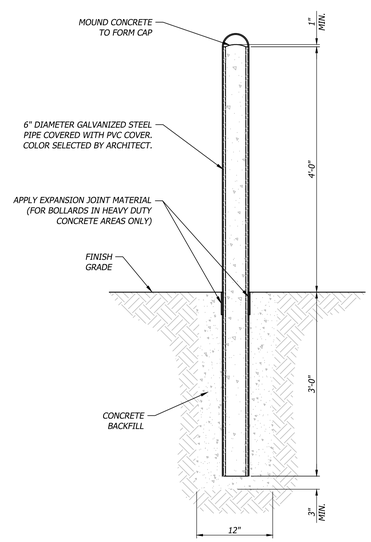
108 Not to Scale — ADA Handicap Parking Signage



INTERNATIONAL SYMBOL OF ACCESSIBILITY

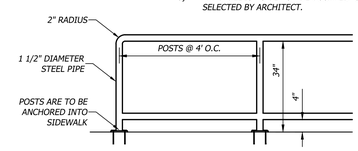
NOTE:
1. SEE SITE GRADING AND DRAINAGE PLAN FOR PAVEMENT AND CURB ELEVATIONS, AND ASSOCIATED ALLOWABLE SLOPES FOR ACCESSIBLE PARKING

109 Not to Scale — ADA Handicap Parking Striping



110 Not to Scale — Steel/Concrete Bollard

HANDRAIL NOTES:
1) ALL PIPE SHALL BE SCH40 STEEL PIPE.
2) GRIND WELD JOINTS SMOOTH.
3) HANDRAIL IS TO BE POWDER COATED. COLOR TO BE SELECTED BY ARCHITECT.



111 Not to Scale — Handrail

NOTES:
1. SIGN TO BE 12x18 ALUMINUM SIGN.
2. BOTTOM OF SIGN TO BE 60" ABOVE FINISHED GRADE.

1

112 Not to Scale — No Parking Fire Lane Sign

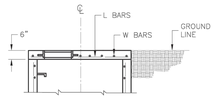
PLAN

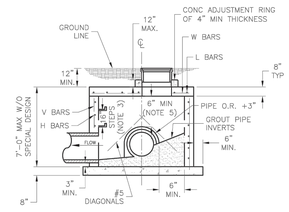


SLAB TOP ALTERNATE FOR JUNCTION BOX (SHALLOW)

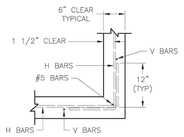
** INCREASE IN MULTIPLES OF 6" (7'-0" MAX WITHOUT SPECIAL DESIGN. (SEE PROJECT PLANS FOR DETAILS)

REINFORCING

BARS	BAR SIZE	SPACING (IN.)
H	4	12
V	4	12
L	5	6
W	5	6



SECTION A–A



WALL CORNER DETAIL

GENERAL NOTES:
1. LOCATE RING AND COVER ON BLANK WALL.
2. USE ¾" CHAMFER STRIP OR ½" R EDGER TOOL ON ALL EXPOSED CONCRETE CORNERS.
3. STEPS REQUIRED AT 16" O.C. WHEN DEPTH FROM TOP OF CASTING TO INVERT EXCEEDS 4' ON BLANK WALL IF POSSIBLE.
4. BOXOUTS WILL NOT BE ALLOWED TO PROJECT THROUGH THE CORNERS OF THE STRUCTURE AND THE MINIMUM DISTANCE BETWEEN BOXOUTS IS 6".
5. THE MINIMUM REINFORCING SHALL BE 1 H–BAR OVER A CAST–IN–PLACE PIPE AND 2 H–BARS OVER A PRECAST BOXOUT.
8. PRECAST LIDS SHALL BE PINNED, SEALED WITH NON–SHRINKABLE GROUT AND REMOVABLE FOR FUTURE MAINTENANCE.
9. REINFORCING OF COVERS IN STREETS REQUIRE SPECIAL DESIGN.
10. FOR RING AND COVER SEE THE STORMWATER APPROVED PRODUCT LIST.

201 Not to Scale — Junction Box

NOTES

1. *ALL CONCRETE SHALL BE 4000 PSI.*
2. *THE FIRST DIMENSION LISTED IN THE CONSTRUCTION NOTES IS THE "L" DIMENSION. THE SECOND DIMENSION IS THE "W" DIMENSION.*
3. *FLOOR OF INLET SHALL BE SHAPED WITH NON-REINFORCED CONCRETE INVERT TO PROVIDE SMOOTH FLOW.*
4. *EXPANSION JOINTS SHALL BE EITHER HOT OR COLD POURED JOINT SEALING COMPOUND, OR PREMOLDED EXPANSION JOINT FILLER.*
5. *STEEL INLET FRAME SPACERS SHALL BE PLACED AT EQUAL SPACINGS NOT TO EXCEED 4'-0".*
6. *BEVEL ALL EXPOSED EDGES WITH TRIANGULAR MOLDING.*
7. *ALL DIMENSIONS RELATIVE TO REINFORCING STEEL ARE TO CENTERLINE OF BARS. 2" CLEARANCE SHALL BE PROVIDED THROUGHOUT UNLESS NOTED OTHERWISE. TOLERANCE OF ±1/8" SHALL BE PERMITTED.*
8. *ALL LAP SPLICES NOT SHOWN SHALL BE A MINIMUM OF 40 BAR DIAMETERS IN LENGTH.*
9. *ALL DOWELS SHALL BE ACCURATELY PLACED AND SECURELY TIED IN PLACE PRIOR TO PLACEMENT OF BOTTOM SLAB CONCRETE. STICKING OF DOWELS INTO FRESH OR PARTIALLY HARDENED CONCRETE WILL NOT BE ACCEPTABLE.*
10. *ALL REINFORCING STEEL SHALL BE SUPPORTED ON FABRICATED STEEL BAR SUPPORTS @ 3'-0" MAXIMUM SPACING.*
11. *DO NOT SCALE THESE DRAWINGS FOR DIMENSIONS OR CLEARANCES. ANY QUESTIONS REGARDING DIMENSIONS SHALL BE BROUGHT TO THE ATTENTION OF THE ENGINEER PRIOR TO CONSTRUCTION.*
12. *THE BOTTOM SLAB SHALL BE AT LEAST 24 HOURS OLD BEFORE PLACING SIDEWALL CONCRETE. ALL SIDEWALL FORMS SHALL REMAIN IN PLACE A MINIMUM OF 24 HOURS AFTER SIDEWALLS ARE POURED BEFORE REMOVAL, AND AFTER REMOVAL SHALL BE IMMEDIATELY TREATED WITH MEMBRANE CURING COMPOUND.*
13. *RCP CONNECTIONS TO PRECAST STRUCTURES SHALL HAVE A MINIMUM OF 6" OF CONCRETE AROUND THE ENTIRE PIPE WITHIN 2' OF THE STRUCTURE.*
14. *THE CONCRETE THICKNESS AND REINFORCEMENT SHOWN IS FOR BOXES WITH ("L"+"H") AND ("W"+"H") LESS THAN OR EQUAL TO 20. FOR BOXES WITH EITHER OF THESE CALCULATIONS GREATER THAN 20, A SPECIAL DESIGN IS REQUIRED.*

STEEL FRAME NOTES:
1. ALL WELDS SHALL BE PERFORMED IN ACCORDANCE WITH APPROPRIATE AWS SPECIFICATIONS AND PROCEDURES.
2. ALL WELDS ON EXPOSED SURFACES SHALL BE DRESSED SO AS TO PROVIDE A PLEASING FINISHED APPEARANCE.
3. THE ENTIRE FRAME SHALL BE PAINTED A SINGLE COAT OF CHEM–PRIME #37H–78 PRIMER (GRAY) OR EQUAL.

GENERAL NOTES:
1. THE FIRST DIMENSION LISTED IN THE CONSTRUCTION NOTES IS THE "L" DIMENSION. THE SECOND DIMENSION IS THE "W" DIMENSION.
2. FLOW LINES LISTED ON THE PROJECT PLANS ARE LISTED AT THE INSIDE FACE OF THE WALL.
3. FLOOR OF INLET GROUTED AND SHAPED TO MATCH PIPE INVERT TO PROVIDE SMOOTH FLOW.
4. LOCATE MH RING AND COVER ON BLANK WALL IF POSSIBLE.
5. STEPS SHALL BE SPACED AT 1'–4" O.C. VERTICALLY ON BLANK WALL IF POSSIBLE.
6. BEVEL ALL EXPOSED EDGES WITH ¾"CHAMFER OR ½" TOOLED EDGE.
7. ON–GRADE INLETS SHALL CONFORM TO THE STREET GRADE AND SUMP INLETS SHALL BE LEVEL.
8. PRECAST LIDS SHALL BE PINNED, SEALED WITH NON–SHRINKABLE GROUT AND REMOVABLE FOR FUTURE MAINTENANCE.
9. LIFTING RINGS SHALL BE REMOVED AND SEALED WITH NON–SHRINKABLE GROUT
10. FOR RING AND COVER SEE THE STORMWATER APPROVED PRODUCT LIST.

NOTES:

1. ALL SEWER STUBS SHALL BE CONSTRUCTED TO PROPERTY LINE OR 10' MINIMUM FROM THE MAIN, WHICHEVER IS GREATER. WHERE SIDEWALKS ARE PRESENT, CONTRACTOR SHALL EXTEND SERVICE LINE UNDER EXISTING SIDEWALK TO TWO FEET BEYOND.
2. IMPERVIOUS TRENCH CHECKS SHALL BE PLACED ON BUILDING SEWER STUBS (AT LEAST 5' AWAY FROM THE SANITARY SEWER MAIN).
3. TRENCH CHECKS ON THE BUILDING SEWER STUBS SHALL EXTEND 6" BELOW THE BOTTOM OF THE PIPE. LENGTH SHALL BE A MINIMUM OF 12". THE HEIGHT OF THE TRENCH CHECK SHALL EXTEND 12" ABOVE THE TOP OF THE PIPE. THE WIDTH OF THE TRENCH CHECK SHALL BE THE WIDTH OF THE TRENCH.
4. SEE SPECIFICATION SECTION 2100 FOR SEWER MAIN BEDDING AND BACKFILL.
5. #12 GAUGE GREEN INSULATED COPPER TRACER WIRE SHALL BE INSTALLED. TRACER WIRE TERMINAL BOXES SHALL BE INSTALLED DIRECTLY ABOVE THE SEWER SERVICE OR AS DETERMINED BY THE ENGINEER.
6. FOR SERVICES, TRACER WIRE SHALL RUN FROM THE WYE AND TERMINATE IN A FLUSH MOUNTED TRACER BOX WITH A GREEN CAST IRON LOCKABLE TOP. WIRE SHALL BE TAPED OR TIED TO THE PIPE AT 5' INTERVALS.
7. TRACER WIRE BOX SHALL BE INSTALLED WITHIN 1.0' OF PROPERTY LINE.
8. THE TRACER WIRE SHALL REMAIN CONTINUOUS TO THE GREATEST EXTENT POSSIBLE. SPLICES IN THE TRACER WIRE SHOULD BE MADE WITH SPLIT BOLT CONNECTORS. WIRE NUTS SHALL NOT BE USED. A WATER-PROOF CONNECTION IS NECESSARY TO PREVENT CORROSION.

NOTES:

1. PRECAST CONCRETE MANHOLES SHALL CONFORM TO ASTM C478 EXCEPT AS MODIFIED BY THE SPECIFICATIONS.
2. A WALL THICKNESS NOT LESS THAN ONE-TWELFTH (D_M) OF THE INSIDE DIAMETER OR 4", WHICHEVER IS GREATER, SHALL BE USED WHEN THE MANHOLE DEPTH IS LESS THEN 15'.
3. WATERPROOFING SHALL BE REQUIRED ON THE OUTSIDE OF MANHOLES. THE WATERPROOFING SHALL CONSIST OF A TOTAL DRY FILM THICKNESS OF NOT LESS THAN 14 MILS OF BITUMINOUS COATING.
4. ONLY ECCENTRIC MANHOLE CONES WILL BE ALLOWED UNLESS OTHERWISE APPROVED BY THE CITY ENGINEER.
5. THE FILL CONCRETE FLOW CHANNEL FOR SIDE BRANCHES SHALL BE PLACED TO PROVIDE A SMOOTH TRANSITION INTO THE FLOW LINE.
6. REFER TO THE APPROVED PRODUCTS LIST FOR WATER UTILITIES FOR APPROVED MANHOLE GASKET MODELS.
7. REFER TO THE APPROVED PRODUCTS LIST FOR APPROVED STEPS.

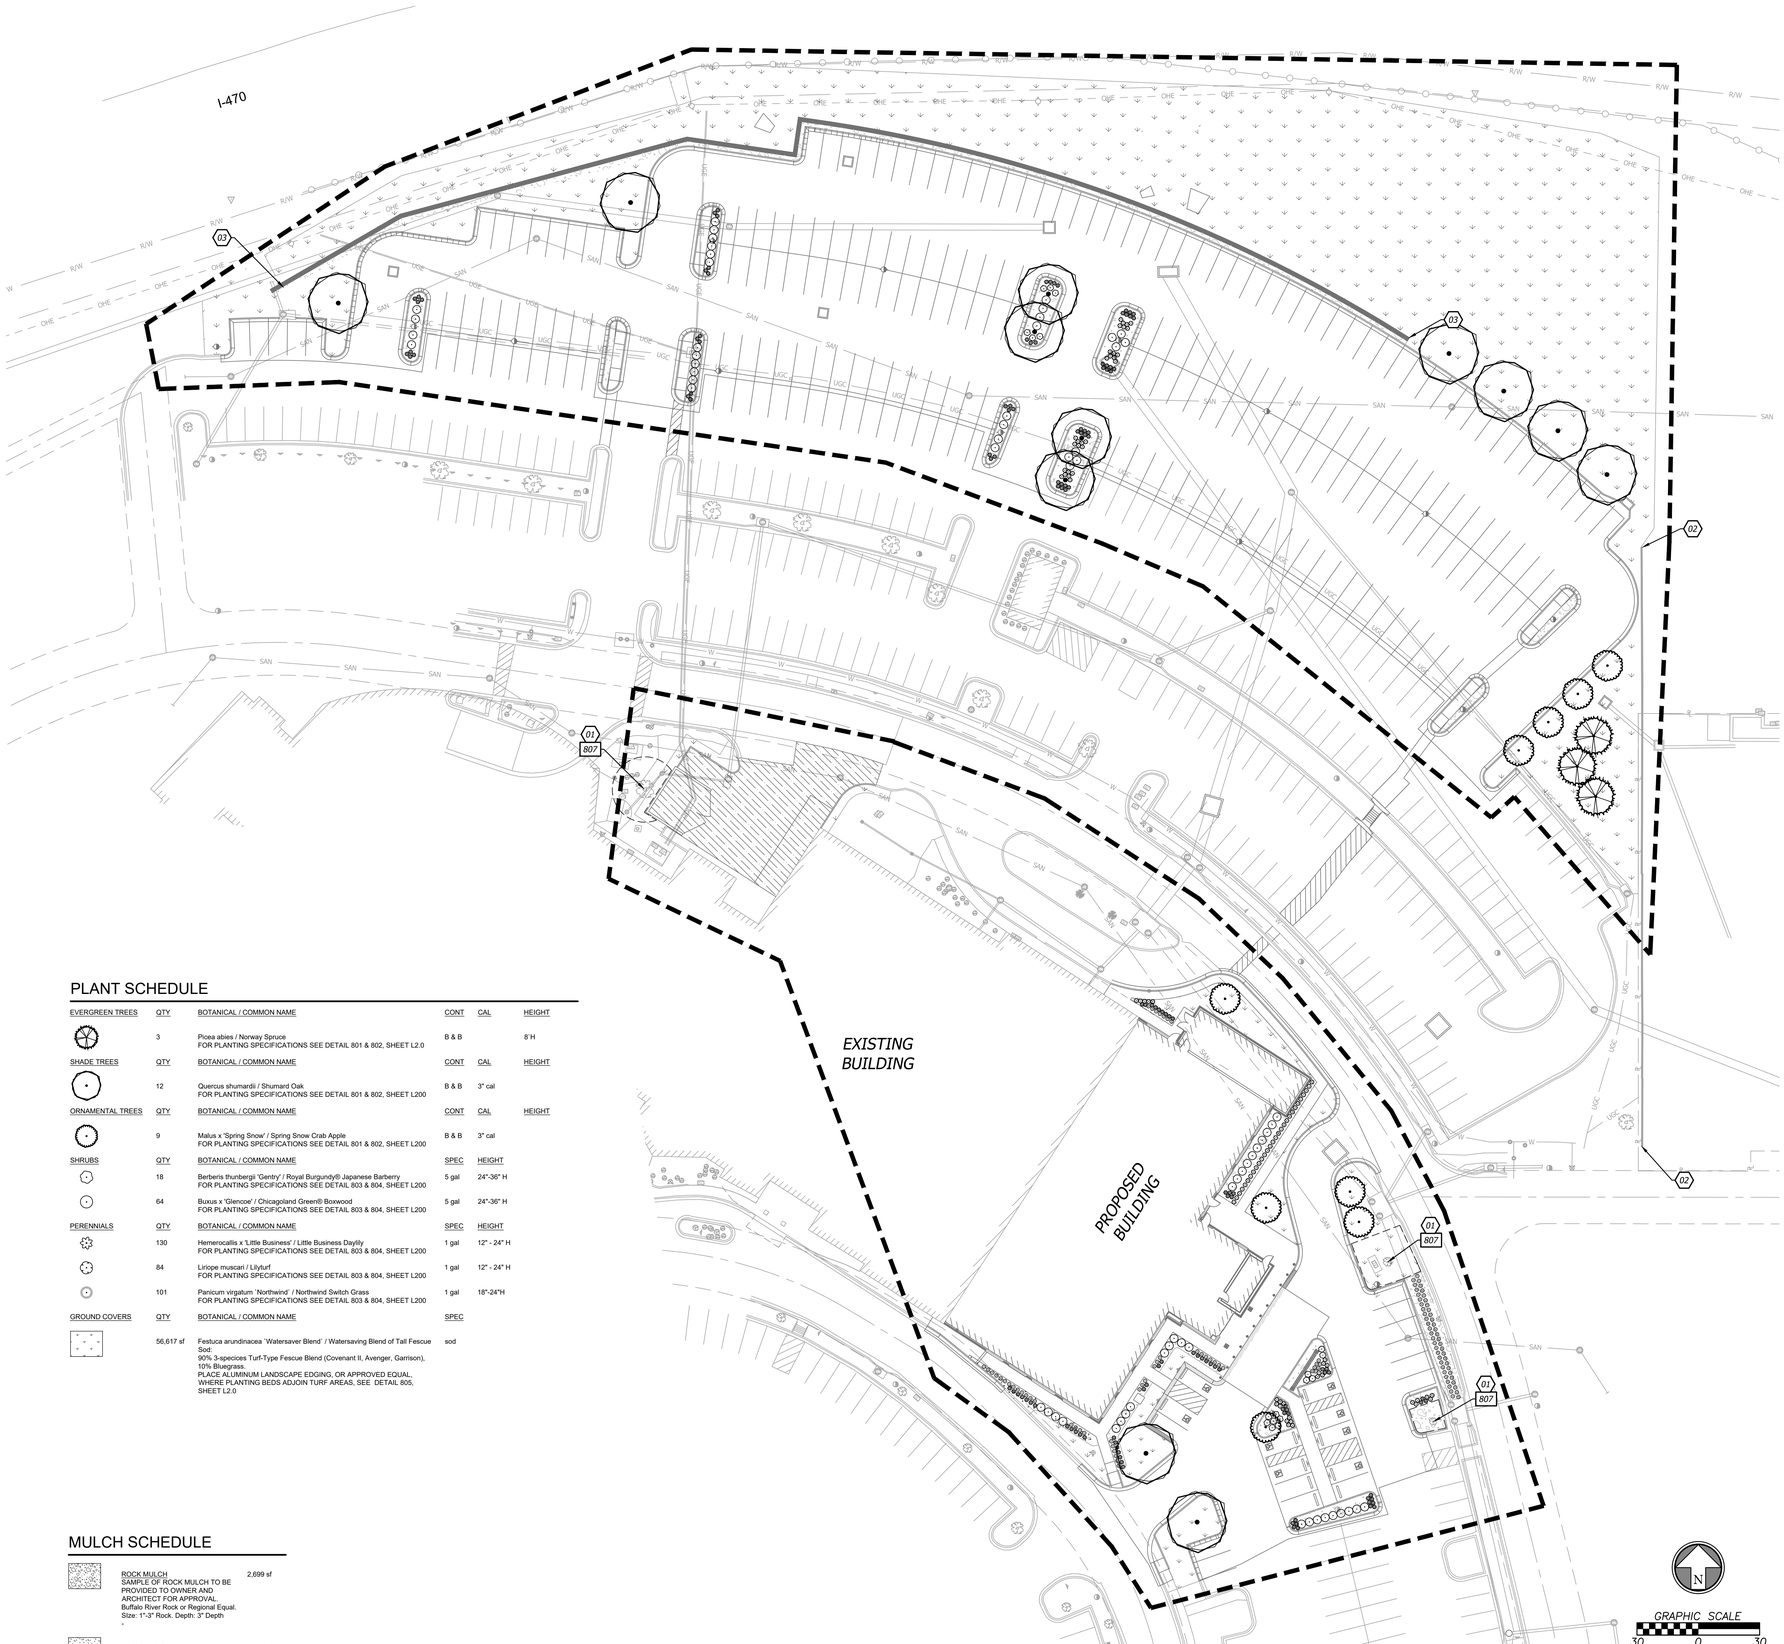
CIVIL DETAILS 4

Jan 16, 2023 - 2:49pm Plotted By: kurtyoder V:\033570-st. lukes east\04-DWG\Eng\Sheet\FDP\033570-SHTS-DTLS.dwg Layout: Civil Details 4



GENERAL LANDSCAPE NOTES

1. The Contractor shall verify and coordinate all final grades with the Landscape Architect and or design team prior to completion.
2. Location and placement of all plant material shall be coordinated with the Landscape Architect prior to installation.
3. Location of all utilities are approximate, the Contractor shall field verify locations prior to commencement of construction operations.
4. Refer to Civil Drawings for all grading and berming, erosion control, storm drainage, utilities and site layout.
5. The Contractor shall arrange and conduct a pre-construction meeting onsite with Landscape Architect prior to work.
6. Plant quantities are for information only, drawing shall prevail if conflict occurs. Contractor is responsible for calculating own quantities and bid accordingly.
7. The Contractor is to notify Landscape Architect after staking is complete and before plant pits are excavated.
8. Tree locations in areas adjacent to drives, walks, walls and light fixtures may be field adjusted as approved by Landscape Architect.
9. The Contractor shall report subsurface soil or drainage problems to the Landscape Architect.
10. The plan is subject to changes based on plant size and material availability. All changes or substitutions must be approved by the City of Lee's Summit, Missouri and the Landscape Architect.
11. Aluminum landscape edging to be used on all landscape beds adjoining turf areas as noted on landscape plans.
12. Landscape Contractor shall be responsible for watering all plant material until the time that a permanent water source is ready.
13. The Contractor shall show proof of procurement, sources, quantities, and varieties for all shrubs, perennials, ornamental grasses, and annuals within 21 days following the award of the contract.
14. Contractor shall provide full maintenance for newly landscaped areas for a period of 30 days after the date of final acceptance. At the end of the maintenance period, a healthy, well-rooted, even-colored, viable turf and landscaped area must be established. The landscaped areas shall be free of weeds, open joints, bare areas, and surface irregularities.
15. Landscape Contractor shall provide rock mulch sample to owner for approval.

GENERAL IRRIGATION NOTES

Irrigation plan to be provided during permitting phase of development

1. Irrigation plan to not interfere with any proposed improvements shown.
2. Irrigation system design to be based on available psi. Minimum operating pressure for spray heads shall be 30 psi and minimum operating pressure for drip zones shall be 40 psi.
3. The contractor shall be responsible for providing uninterrupted, 110 v electrical service to the controller and for all hook-ups. All exposed low voltage wire shall be enclosed in a conduit.
4. Place valve boxes 12" minimum from and parallel to curbs and walks, grouped valves to be equally spaced.
5. Install all mainlines to 1% minimum slope to drain valves located at low points of main system.
6. Irrigation controller and rain sensor shall be located in owner approved locations.

00 LANDSCAPE PLAN KEYNOTES

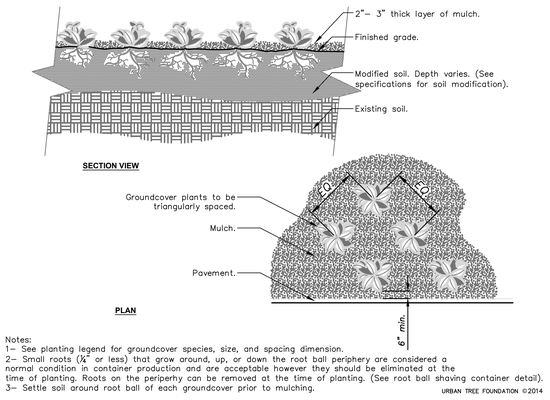
TREE PLANTING DETAIL

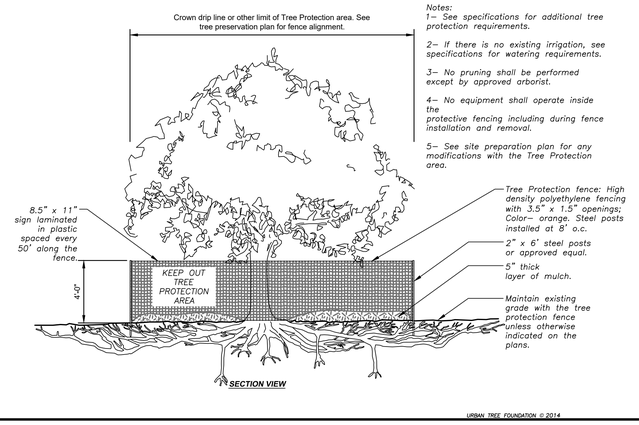


Notes:
1– See planting legend for groundcover species, size, and spacing dimension.
2– Small roots (¼" or less) that grow around, up, or down the root ball periphery are considered a normal condition in container production and are acceptable however they should be eliminated at the time of planting. Roots on the periphery can be removed at the time of planting. (See root ball shaving container detail).
3– Settle soil around root ball of each groundcover prior to mulching.

URBAN TREE FOUNDATION ©2014

804 Not to Scale

GROUNDCOVER SPACING DETAIL



Notes:
1– See specifications for additional tree protection requirements.
2– If there is no existing irrigation, see specifications for watering requirements.
3– No pruning shall be performed except by approved arborist.
4– No equipment shall operate inside the protective fencing including during fence installation and removal.

Pro 5 Weed Barrier

DeWitt Pro 5 Weed Barrier is a woven, needle-punched polypropylene fabric for commercial grade weed control. Specified by leading architects, the fabric is designed to allow air, water, and nutrients through. The fabric will not rot or mildew, and is formulated to resist uv degradation.

Property	Test Method	Unit	Minimum Average Roll Value
Woven Material			Polypropylene
Fiber Backing			Polyester
Color			Black with Gold Stripe every 12"
Construction Weave			15 x 10 or 10 x 15
Weight	ASTM D 5261	OZ/SY	5.0
			Scrim 2.8
			Cap 2.2
Grab Tensile Strength	ASTM D 4632	LBS	Warp 80
			Weft 80
Grab Elongation	ASTM D 4632	%	Warp 15
			Weft 15
Trapezoid Tear	ASTM D 4533	LBS	Warp 30
			Weft 30
Puncture	ASTM D 4241	LBS	300
Water Permeability	ASTM D 4491	CAL/MIN/SF	10
Ultraviolet Exposure	ASTM D 4355	% Strength Retained	>70% after 2500 Hrs Carbon Arc Exposure

Note: 01/15/02: The data sheet supercedes all previously issued data.
Roll goods: 15ft. wide, 300 ft. long, 4 ounces.

WEED BARRIER DETAIL

PLANTING NOTES

1. Location of all existing utilities needs to be done before commencing work.
2. The planting plan graphically illustrates overall plant massings. Each plant species massing shall be placed in the field to utilize the greatest coverage of ground plane. The following applies for individual plantings:
   A. Creeping groundcover shall be a minimum of 6" from paving edge.
   B. All trees shall be a minimum of 3 ft. from paving edge.
   C. All plants of the same species shall be equally spaced apart and placed for best aesthetic viewing.
   D. All shrubs shall be a minimum of 2 ft. from paved edge.
3. Mulch all planting bed areas to a minimum depth of 3". Mulch individual trees to a minimum depth of 2".
4. Note: If plants are not labeled - they are existing and shall remain.
5. All landscaped areas in right of way shall be sodded and irrigated unless otherwise specified.

MATERIALS:

1. Plant material shall be healthy, vigorous, and free of disease and insects as per AAN standards.
2. Kind, size and quality of plant material shall conform to American Standard for nursery stock, ANSI-260-2004, or most recent edition.
3. Shredded bark mulch installed at trees shall be finely chipped and shredded hardwood chips, consisting of pure wood products and free of all other foreign substances. Pine bark compost mulch installed at planting bed areas shall be free of all other foreign substances.

INSTALLATION:

1. All compacted soil within the area to be landscaped shall be removed to a depth of not less than two (2) feet and shall be backfilled with topsoil.
2. Prepare planting beds by incorporating an approved composed organic soil into existing soil for all shrub, perennial, and annual planting beds at a minimum depth of 6". Thoroughly mix organic material into the existing soil by roto-tilling or other approved method to a minimum depth of 12".
3. Planting of trees, shrubs, and seeded groundcover shall be commenced during either the spring (March 15 - June15) or fall (September 1 - October 15) planting season and with water available for hand irrigation purposes.
4. Apply liquid, root stimulator, to all shrubs and groundcovers at rates recommended by manufacturer during first planting watering following installation.
5. All planting beds will be prepared with polypropylene landscape fabric, that meets or exceeds the DeWitt Pro5 specification, before plant material is installed. Any product substitution to be submitted by contractor to project manager for approval prior to installation. Rock mulch to be placed over polypropylene landscape fabric at a depth of 2" - 4".
6. Landscape fabric should be installed flat with all folds either pinned down with 4" landscape pins, overlap adjoining sheets a minimum of 2 - 4" steel landscape staples to be used to pin down the corners before rock mulch is installed.
7. After plants have been installed, all planting beds shall be treated with dacthal pre-emergent herbicide prior to mulch application.
8. Plant pit backfill for trees and shrubs shall be 20% peat or well composted manure and 80% topsoil.
9. Trees planted in landscaped planting areas shall be situated a minimum of three (3) feet from any curb.
10. Plant material shall be maintained and guaranteed for a period of one year after owner's acceptance of finished job. All dead or damaged plant material shall be replaced at landscape contractor's expense.
11. Landscape contractor shall maintain all plant material until final acceptance, at which point the one year guarantee begins.
12. All landscape beds shall be level with surrounding hardscape.

SOD NOTES

1. All disturbed areas shall be sodded with turf-type tall fescue sod with a minimum of three cultivars.
2. All landscaped areas shall receive a minimum 6-inch depth of topsoil compacted to 85% density at optimum moisture content.
3. The entire surface to be landscaped should be reasonable smooth and free from stones, roots or other debris.
4. Sod shall be machine stripped at a uniform soil thickness of approximately one inch (plus or minus 1/4-inch). The measurement for thickness shall exclude top growth and thatch, and shall be determined at the time of cutting in the field. Precautions shall be taken to prevent drying and heating. sod damaged by heat and dry conditions, and sod cut more than 18 hours before being incorporated into the work shall not be used.
5. Handling of sod shall be done in a manner that will prevent tearing, breaking, drying and other damage. Protect exposed roots from dehydration. Do not deliver more sod than can be laid within 24 hours.
6. Moisten prepared surface immediately prior to laying sod. water thoroughly and allow surface to dry before installing sod, fertilize, harrow or rake fertilizer in the top 1-1/2-inches of topsoil, at a uniform rate.
7. Fertilizer shall be 20-10-5 commercial fertilizer of the grade, type, and form specified and shall comply with the rules of the state dept. of agriculture. fertilizer shall be identified according to the percent N,P,K in that order.
8. Saturate sod with fine water spray within two hours of planting. During the first week after planting, water daily or more frequently as necessary to maintain moist soil to a minimum depth of four inches.

IRRIGATION NOTES

1. The system design assumes a minimum available static pressure for the irrigation system of 75 psi at the 1 inch meter. Contractor to verify pressure and flow on site prior to construction and report and discrepancies between these assumptions and actual field conditions in writing to the owner's representative.
2. Read thoroughly and become familiar with the specifications and instillation details for this and related work prior to construction.
3. Coordinate location and marking of underground utilities prior to construction. Notify the owner's representative of any conflict with any underground utility.
4. Do not proceed with the instillation of the irrigation system when it is obvious in the field that obstructions or grade differences existing that might not have been considered in the engineering, or if discrepancies in construction details, legend, notes, or specifications are discovered. Bring all such obstructions or discrepancies to the attention of the owner's representative in writing prior to construction.
5. These drawings are diagrammatic. therefore, the following should be noted:
   A. Avoid conflicts between the irrigation system, planting materials and architectural features. Instill irrigation pipe and wiring in landscaped areas whenever possible.
   B. Use only standard tees and elbow fittings. use of cross type fittings is not permitted.
   C. Irrigation pipe and valves may be shown outside of the planting area, in the hardscape, or outside of property lines for graphic clarity only. Install all irrigation components within landscapes areas or through sleeving and within the property boundary.
6. Provide the following components to the owner's representative prior to the completion of the project.
   A. Two operating keys for each type of manually operated valves.
   B. Two of each servicing wrench or tool needed for complete access, adjustment, and repair of all sprinklers and emitters.
7. Select nozzles for spray and rotary sprinklers with arcs that provide complete and uniform coverage with minimum overspray for the site conditions. To minimize overspray, install pressure compensating nozzles or pressure compensating screens if uniform lateral pressure cannot be attained with pressure adjustment at the remote control valve. Carefully adjust the radius of the throw and arc of coverage of each spray and rotary sprinkler to provide the best performance.
8. The irrigation contractor is responsible for coordinating with the general contractor for the instillation of irrigation sleeving. All sleeving will be schedule 40 PVC. All pipe and wire will be installed in separate sleeves at all paved surfaces, sidewalks, driveways, walls, footings, and hardscape areas. All sleeves may not be shown and/or sized in the plans. The general contractor is responsible for coordinating with the irrigation contractor for the instillation of all required sleeving, proper sizing, and coordinating instillation of sleeving with other trades. Any pipe or wire which passes beneath existing hardscape where sleeving was not installed, requires horizontal boring by the irrigation contractor. Sleeve and conduit sizes shall be a minimum of twice the aggregate diameter of all pipe and wire contained within sleeve or conduit pipe. Minimum sleeve size is 2-inch. Indicate all sleeve locations on "as-built" record drawings.
9. Coordinate and install all electrical power to the irrigation control system in accordance with the national electric code and all applicable local electric utility codes.
10. Gate valves shall be ported to provide for full flow. Labeled and nominal size of valve opening shall be the same.
11. All materials and workmanship shall be true to type, form, finish and of the highest standards of the trade. Damaged or inferior materials shall be removed from the site without delay.
12. Install pressure regulating module for all drip valve assemblies, set discharge pressure to 35 psi.
13. Install irrigation pipe and components a minimum of 8 feet from tree root balls. Pipe routings shown on drawings are diagrammatic.
14. Provide #12-1 AWG bare copper tracing wire along the entire mainline routing. Provide 24 inch coil of tracing wire in each valve box along mainline routing.
15. Contractor shall furnish and install material and equipment pertaining to the irrigation system herein specified or shown on the drawings. This shall include all items necessary to complete installation.
16. Irrigation contractor to cap all flush ends hand tight prior to backfill.
17. Irrigation contractor shall coordinate work with planting plans to avoid conflicting locations between piping and plant pits.
18. All materials shall be installed as detailed in the plans. If the contract drawings and/or specifications do not thoroughly describe the method or techniques to be used, then the contractor shall install as per manufacturers specifications. If a contradiction occurs, notify the landscape architect immediately.
19. Irrigation contractor to use Teflon tape on all threaded joints.
20. No pipes shall be installed parallel and directly over another line.
21. Brand each valve box with 1" lettering showing zone number and controller letter. This stamp is to match the zone and controller associates with the valve's operation.
22. Contractor shall perform the following:
   A. Visit site and verify existing grades, construction and conditions.
   B. Notify landscape architect of discrepancies between plan and field conditions.
   C. Restore contractor damaged existing work to the satisfaction of the engineer or landscape architect without cost to the owner.
   D. Be satisfied that the plan can be constructed, functional and complete.
23. All equipment shall be maintained while under construction. Maintenance includes: water scheduling, replacement of defective or damaged equipment, adjustment and re-adjustment of heads and other equipment.
24. Contractor to ensure the following:
   A. Lines and valves are to be placed within planting beds and project limits. These plans are schematic. contractor shall size all pipe.
   B. 100% coverage of irrigation system to all plants regardless of size or type and shall confirm all non-irrigated areas prior to submitting a bid.
25. Install two (2) spare #14-1 AWG control wires for each unused station and one spare #12-1 AWG common wire from the respective controller to this location for use as a spare wires in each remote control valve box along the entire wire routing for this controller. Seal wire ends water tight and contain within valve box at this location.
26. Should field adjustments be made to the site plan, irrigation contractor shall make all necessary adjustments to the irrigation system to ensure proper functionality. Landscape architect is to be notified of any and all changes made to the irrigation system, prior to instillation of said changes.

GENERAL NOTES

A. GENERAL

1. These notes shall be read in conjunction with the Specifications and the Drawings. In the event of a conflict, notify the Architect for clarification.
2. Before executing anything herein shown, examine actual job conditions. Report any discrepancy, dimensional or otherwise, between architectural and structural Drawings and any other error, omission, or difficulty affecting the work to the Architect and to the Structural Engineer for review.
3. Any condition encountered in the existing structural system which is different from that indicated in Drawings or which might create a failure or hazard shall be brought to the immediate attention of the Architect.
4. The Owner or his Representative reserves the right to inspect any material, fabrication, or workmanship at any time in field or shop for conformance to the Specifications and Drawings.
5. All details and sections are intended to be typical and shall be construed to apply to any similar situation elsewhere, except where a different detail is shown.
6. All concrete and cmu alls shall be temporarily braced until floor and roof decks have been installed and all connections between these elements have been made. The contractor is responsible for the design of the bracing.
7. The contractor is responsible for structural integrity and stability of existing structures during demolition and new construction.

B. DESIGN

1. Codes, specifications and standards (latest editions, U.N.O.)
   a. All design and construction shall conform to the International Building Code (2018) as amended and adopted by the City of Lee's Summit, Missouri.
   b. All construction shall comply with the provisions of the following codes, specifications and standards, except where noted to the contrary on drawings and specifications or where more stringent requirements are specified or shown:
      MCIB "Specifications for Concrete Work"
      ACI 117 "Standard Specifications for Tolerance for Concrete Construction and Materials"
      ACI 301 "Specifications for Structural Concrete for Buildings"
      ACI 318 "Building Code Requirements for Reinforced Concrete"
      ACI 530 "Building Code Requirements for Masonry Structures"
      ASCE 7 "Minimum Design Loads for Buildings and Other Structures"
      AISC "Load and Resistance Factor Design (LRFD) Specification for Structural Steel Buildings"
      AISI "Specifications for the Design of Cold-Formed Steel Structural Members"
      SJI "Specifications, Load Tables, and Weight Tables for Steel Joist and Joist Girders"
      SDI "Steel Deck Manual for Floor Decks and Roof Decks"
      AWS D1.1 "Structural Welding Code - Steel "
2. Design Loads:
   a. Future Roof - Snow (incl. rain on snow)
      - Flat Roof Snow Load, Pf 24 psf
      - Snow Exposure Factor, Ce 1.00
      - Snow Importance Factor, Is 1.20
      - Thermal Factor, Ct 1.00
   b. Wind
      - Basic Wind Speed (3 second gust), V 130 mph
      - Risk Category II
      - Wind Exposure C

      - Seismic Response Coefficient, Cs 0.023
      - Response Modification Factor, R 5.5
      - Analysis Procedure Equivalent Lateral Force
   d. Roof Live Load 30 psf
   e. Floor Live Load 100 psf
3. Foundations are designed for the following net allowable bearing capacities:
   a. Drilled Pier on limestone 50,000 psf
4. Foundations and retaining walls have been designed for the following equivalent fluid pressures:
   a. Active (Ka) 40 pcf
   b. At-Rest (Ko) 60 pcf
   c. Passive (Kp) 260 pcf

C. EARTHWORK

1. Refer to specification for access to geotechnical report.
2. Foundation design is based on a soils investigation by Alpha - Omega Geotech
3. Refer to Drawings and Specifications for details of fill and compaction requirements.
4. Foundation wall backfill shall not be unbalanced by more than two (2) feet on either side at any time or placed before the interior floors and shear walls are placed.
5. At stepped footings, place the lower footing first and run footing a minimum of 1 foot under upper footing.
6. Clean footing excavations immediately before concrete is placed to remove all material softened or loosened.
7. Place footings against undisturbed earth (i.e. bottom & sides).
8. All perimeter footings and footings in unheated portions of the building should extend a minimum of 3'-0" below final grade.

D. CONCRETE

1. Concrete used in the Work shall have the following minimum 28-day ultimate compressive strengths:
   a. Drilled Piers, Footings, Grade Beams
      Interior Slabs-On-Grade: 4000 psi
   b. Columns and Concrete Walls: 6000 psi
   c. Framed Slabs: 4500 psi
2. Portland Cement: ASTM C 150, Type 1.
3. Water-reducing admixtures: ASTM C 494.
4. Normal Weight Aggregates: ASTM C 33.
5. In case of integral construction, higher strength and lighter weight governs.
6. Air entrain all exterior concrete (admixture: ASTM C 260).
7. Do not use calcium chloride admixtures under any circumstances.
8. Reinforcing bars: ASTM A 615 Specifications, Grade 60, deformed. Bend bars cold.
9. Welded wire reinforcing (WWR): ASTM A 185.
10. Anchor bolts: Refer to "Steel" notes. Accurately locate anchor bolts with templates, and hold securely in position prior to and while placing concrete. Protect anchor bolts from construction activity until the structure above is in place. Inserting anchor bolts into partially hardened concrete is prohibited.
11. Maintain minimum concrete coverage for reinforcing as indicated, unless noted otherwise.
    a. 3 in. clear where concrete is deposited directly against earth.
    b. 2 in. clear where concrete is exposed to earth or weather but poured against forms for bars larger than #5.
    c. 1-1/2 in. clear where concrete is exposed to earth or weather, but poured against forms for bars #5 or smaller.
    d. 3/4 in. clear for slabs and walls formed above grade not exposed to weather.
    e. 1-1/2 in. clear for beam and columns formed above grade and not exposed to weather.
12. Lap all bars at splices in accordance with ACI 318, but not less than 48 bar diameters nor less than 18 inches unless noted otherwise. All horizontal wall bars shall be developed at corners either by bending not less than 18 inches around corners or with properly placed hooked and lapped corner bars. Lap WWR a minimum of 9". Reference Typical Details for column splice requirements.
13. Top and bottom bars in continuous footings shall run continuous through multiple spans, where possible. Otherwise, top bars shall splice within the middle 1/3 span and bottom bars shall splice (by lapping 3'-0) over supports.
14. Pour columns, walls, and pilasters to be monolithic.
15. All bar steel and WWR shall be properly supported and held accurately in place as recommended by the Concrete Reinforcing Steel Institute, except that maximum spacing of any bar or welded wire fabric support shall be 3 feet.
    a. Support top slab bars with continuous high chairs.
    b. Support beam bars on heavy beam bolsters.
    c. Support footing and grade beam bottom reinforcing on concrete bricks, concrete blocks, or mounds of poured concrete. Do not use any other support materials without the approval of the Engineer.
    d. Support WWR in slab-on-grade properly at the mid-depth of the slab. Hooking and pulling up mesh after concrete has started to take its initial set is prohibited.
18. Interior slabs-on-grade: Reference Drawings for thickness of slab and size of WWR reinforcement. Place slab on a 15 mil. vapor barrier over a free draining granular sub-base as recommended by the geotechnical engineer.
19. Where slabs-on-grade make an abrupt change in direction, such as at doors and corners or ends of walls, provide 1-#4 by 4 feet across the reentrant corner.
20. Openings in slabs and walls: Provide 2 - #5 extra bars each side of opening extending 2 feet past the opening, unless noted otherwise. Do not provide or cut any openings or sleeves in slabs or walls other than those shown on the Structural Drawings, unless approved by the Structural Engineer.

E. MASONRY

1. Concrete masonry units (CMU): ASTM C 90, minimum net area compressive strength of 2800 psi for type M or S mortar and 3050 psi for Type N mortar.
2. Mortar: Portland cement and lime, and proportioned in accordance with ASTM C 270 for the following types:
   Type N - for all walls above grade
   Type M - for all walls below grade, in contact with earth
3. f'm = 2000 psi - hollow units.
4. Concrete Masonry shall be laid in running (common) bond.
5. Provide mortar bed on webs between grouted cells and hollow cells.
6. Grout: ASTM C 476, 2,500 psi minimum 28-day compressive strength.
7. Concrete Masonry below finished floor shall be normal weight units and shall have all cells fully grouted. Concrete Masonry above finished floor shall be light weight units and shall be grouted as specified.
8. Grout all vertical cells and spaces containing reinforcing bars (as detailed) bond beams, and lintels.
9. Vertically reinforce walls as shown on the "CMU wall schedule". In addition, reinforce vertically at each corner, 2 cells at ends of walls, 2 cells each side of control joints and openings.
10. Horizontally provide continuous bond beam with 2 #5 minimum for 12" CMU; (1) #5 minimum for 8" or 6" CMU at floor/roof, 8'-0" above floors and top of wall, unless noted otherwise. Provide #5 corner bar for each horizontal bond beam bar at all wall corners.
11. Place reinforcement prior to grouting. Hold vertical reinforcement in position with rebar positioner wire bond hot dip galvanized 3401 for single bars and 3402 for double bars, or equivalent (min. 2 each lift).
12. Provide horizontal joint reinforcement as indicated on the drawings and specifications, at a minimum provide at 16"o.c.
13. Lap joint reinforcement a minimum of 6 in.
14. In no case shall shores and forms at lintels be removed until it is certain that the masonry has hardened sufficiently to carry its own weight and all other reasonable temporary loads that may be placed on it during construction.
15. Do not wet concrete masonry units, except saw cutting.
16. Do not use calcium chloride.
17. Do not use masonry cement.
18. Install temporary bracing at all CMU walls. Do not remove temporary bracing until wall is permanently braced by connection to the roof and floor structures.
19. Provide cleanout openings at bottom of cells to be grouted when grout pour exceeds 5'-0" in height. Remove all overhanging mortar or obstructions and any debris from inside such cell walls.

F. STEEL

1. Structural steel:
   a. Wide Flange sections ASTM A 992
   b. WT shapes ASTM A 992
   c. Channels, Angles and Plates ASTM A 36
   d. HSS (Round and Rectangle) ASTM A 500, Grade B
   e. Pipes (Standard, X and XX) ASTM A 501
2. Beam and column connections shall be as shown on plans.
3. Except where specifically detailed, single plate and/or eccentric connections shall not be used without supporting calculations from the fabricator showing adequate capacity. The calculations shall be made by a Structural Engineer registered in the State of Missouri.
4. High Strength Bolts (steel-to-steel connections): ASTM A 325N, snug tightened, bearing type.
5. Anchor bolts: ASTM F1554 Grade 36
6. Welded connections: AWS Standards and Specifications using E70xx electrodes, unless noted otherwise.
7. Ends of beams which have copes to the extent that allowable shear or bending stress of steel is exceeded shall have web plates of sufficient size welded to the beam to reduce such stresses.
8. Provide holes required for securing other work to structural steel framing, and for passage of other work through steel framing members, as shown on final shop drawings.
9. Do not flame cut holes or enlarge holes by burning.
10. Set structural frames accurately to lines and elevations indicated. Align and adjust various members forming apart of a complete frame or structure before permanently fastening. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.
11. Provide temporary shoring and bracing members with connections of sufficient strength to bear imposed loads. Remove temporary members and connections when permanent members are in place and final connections are made. Provide temporary guy line to achieve proper alignment of structure as erection proceeds.
12. Clean bearing surfaces of bond-reducing materials and roughen to improve bond to surfaces. Clean bottom surface of base plates.
13. Grout plates are prohibited. Tighten anchor bolts after supported members have been positioned and plumbed. Do not remove wedges or shims, but if protruding, cut off flush with edge of base plate prior to packing with grout.
14. Nonshrink grout: CRD-621 Type A, premixed, nonmetallic, noncorrosive, nonstaining.
15. The physical and structural properties listed by Dietrich Industries, Inc. for light gage metal framing shall be considered the minimum permitted for all framing members. Any substitutions must be approved in writing ten (10) days prior to ordering materials, by the Architect and/or Engineer of Record.

G. METAL DECK

1. Roof deck: 1-1/2" galvanized wide rib deck with the following minimum properties:
   Minimum gage 20
   Moment of Inertia 0.201 in ^4
   Section Modulus 0.234 in ^3
2. Roof deck: 3" galvanized wide rib deck with the following properties:
   Minimum gage 20
   Moment of Inertia 0.848 in ^4
   Section Modulus 0.501 in ^3
3. Composite floor deck: 1-1/2" galvanized with the following minimum properties:
   Minimum gage 18
   moment of inertia 0.282 in ^4
   Section Modulus 0.315 in ^3
4. Roof deck shall be attached to supports to resist a net uplift of 30 PSF.
5. The roof deck has been designed as a diaphragm. Weld deck to all supports and around perimeter with 5/8" dia. puddle welds @ 12"o.c. and provide (3) #10 tek screw side laps between supports for 1 1/2" deck.
   Weld deck to all supports and around perimeter with 5/8" dia. welds @ 8"o.c. and provide (3) #10 tek screw side laps between supports for 3" deck.
6. Provide 2-1/2" x 2-1/2" x 1/4" angles as required to support deck at columns, ends of beams, around openings, etc. Except as noted otherwise.

F. POST-INSTALLED ANCHORS

1. Except where indicated on the drawings, post-installed anchors shall consist of the following anchor types:
   a. Anchorage to concrete and grouted cmu walls.
      i. Adhesive anchors shall have been tested in accordance with ACI 355.4 and/or ICC-ES AC308 for cracked concrete and seismic applications. Adhesive anchors shall be installed by a certified adhesive anchor installer Where designated on the contract documents. Pre-approved products include:
         1. Hilti HIT-HY 200 SAFE SET System with Hilti HIT-Z Rod per ICC ESR-3187.
         2. Hilti HIT-HY 200 SAFE SET System with Hilti hollow drill bit system with HAS-E threaded rod per ICC ESR-3187
         3. Hilti HIT-HY 200 SAFE SET System without Hilti hollow drill bit system with HAS-E threaded rod per ICC ESR-3187. Follow manufacturer recommended hole cleaning practice for this option.
         4. Simpson Strong-Tie SET-XP adhesive anchoring system per ICC ESR-2508.
      ii. Screw anchors shall have been tested in accordance with ACI 355.2 and/or ICC-ES AC193 for cracked concrete and seismic applications. Pre-approved products include:
         1. Hilti KWIK HUS EZ screw anchors per ICC ESR-3027.
            To be used in concrete and grouted cmu walls.
            (For interior applications only, not approved for exterior application)
   b. Anchorage to Masonry Hollow Cells and Brick
      i Adhesive Anchors to Use:
         1. Hilti Hit-HY 70 Masonry Adhesive anchoring system per ICC ESR-3342. Steel Anchor element shall be Hilti HAS-E continuously threaded Rod. The appropriate size screen tube shall be used per adhesive manufacturer's recommendation.
         2. Simpson Strong-Tie AT Masonry Adhesive anchoring system per ICC ESR-3342. Steel Anchor element shall be continuously threaded Rod. The appropriate size stainless steel screen tube shall be used per adhesive manufacturer's recommendation.
2. Install anchors per the manufacturer instructions, as included in the anchor packaging.
3. Drill holes for wedge-type expansion anchors using a bit incapable of cutting steel. Do not cut existing concrete reinforcing steel. If, while drilling, reinforcing steel is encountered, notify the Structural Engineer for approval of new location. Clean and patch the abandoned hole with grout. Always follow manufacturer's written instructions.
4. Where epoxy anchors are indicated to be installed at "reduced installation torque" on these drawings, follow above referenced ICC ESR reports to determine required installation torque.
5. Anchor capacity used in design shall be based on the technical data published by Hilti, Simpson, or such other method as approved by the Structural Engineer of Record. Substitution requests for alternate products must be approved in writing by the Structural Engineer of record prior to use. contractor shall provide calculations demonstrating that the substituted product is capable of achieving the performance values of the specified product. Substitutions will be evaluated by their having an ICC ESR showing compliance with the relevant building code for seismic uses, load resistance, installation category, and availability of comprehensive installation instructions. Adhesive anchor evaluation will also consider creep, in-service temperature and installation temperature.
6. The contractor shall arrange for an anchor manufacturer's representative to provide onsite installation training for all of their anchoring products specified. The Structural Engineer of Record must receive documented confirmation that all of the contractor's personnel who install anchors are trained prior to the commencement of installing anchors.
7. Anchor capacity is dependent upon spacing between adjacent anchors and proximity of anchors to edge of concrete. Install anchors in accordance with spacing and edge clearances indicated on the drawings.
8. If a specific epoxy adhesive anchoring system is noted in a particular detail of this constructino drawings, other alternative product options listed above in item 1 shall not apply.

G. LIGHT GAUGE STRUCTURAL STEEL FRAMING

1. The contractor is responsible for the design of all structural light gauge steel framing and connections between them and the other structural members. Submit design calculations and drawings, sealed by an engineer licensed in the state of the project location, for review by the architect/ structural engineer of record.

H. GLAZING SYSTEM

1. The contractor is responsible for the design of all glazing system and connections between them and the other structural members.
   Submit design calculation sand drawings, sealed by an engineer licensed in the state state of the project location, for review by the architect/ structural engineer of record.

H. CONSTRUCTION

1. Provide adequate shoring or bracing during construction to resist forces such as wind and unbalanced loading due to construction.
2. Protect existing building as required until all new construction is complete.
3. Verify all dimensions of or to existing construction. Any variation from that shown on plans shall be brought to the attention of the Architect/Engineer before proceeding.
4. Haul off and properly dispose of all material demolished from the site unless specifically directed otherwise by the Owner.
5. Field verify the location and depth (or height) of all utilities prior to beginning construction in order to provide adequate clearances and to insure noninterruption of service.
6. Before core drilling any holes, locate the reinforcing steel in the existing concrete with Rebar Locator. Relocate the hole to avoid cutting any rebars. Do not drill holes through existing rebars unless acceptable to the Structural Engineer. Do not overcut any holes.
7. Cut openings in existing concrete slabs and walls with a power saw to prevent vibration and damage of surrounding structure.
8. Core drill corners of openings in existing concrete slabs and walls prior to saw cutting. Size of core shall be sufficient to prevent saw overrun.
9. Contact engineer for details to fix damaged/missing anchorbolts, misplaced concrete reinforcing and damaged/missing masonry dowels.
10. During welding or any other construction activity that generates sparks or intense heat, the contractor shall provide adequate fire protection to the existing structure and contents. as a minimum:
    - remove combustible materials from areas of welding and sparks.
    - provide fire proof blankets and shields to contain sparks where combustible materials cannot be removed.
    - provide a fire safety observer with a fire extinguisher on both the roof and below the roof during welding near the roof structure.

SPECIAL INSPECTION AND TESTING

1. The following tests and inspection shall be performed by an independent inspection agency employed by the owner and approved by the structural engineer and the building official Test and inspection reports shall be submitted to the owner, architect, structural engineer, and building official. Special inspection shall conform to Chapter 17 of the 2018 International Building Code.

Classification of Work Requiring Special Inspections

- Excavation and Filling
- Verification of Soils
- Placement of Reinforcing Steel
- Placement of Reinforced Concrete
- Testing of Reinforced Concrete
- Bolts Installed in Concrete
- Structural Masonry
- Structural Welding
- High Strength Bolting
- Steel Frame Inspection
- Seismic Resistance
- Inspection of Structural Steel Fabricator
- Sprayed Fine-Resistant Materials
- Fire-Resistant Penetrations and Joints

REQUIRED SPECIAL INSPECTIONS AND TEST OF SOILS

VERIFICATION AND INSPECTION TASK	CONTINUOUS DURING TASK LISTED	PERIODICALLY DURING TASK LISTED
1. Verify materials below shallow foundations are adequate to achieve the design bearing capacity.	-	X
2. Verify excavations are extended to proper depth and have reached proper material.	-	X
3. Perform classification and testing of fill materials.	-	X
4. Verify use of proper materials, densities and lift thickness during placement and compaction of compacted fill.	X	-
5. Prior to placement of compacted fill, observe subgrade and verify that site has been prepared properly.	-	X
6. Verify materials below drilled piers are adequate to achieve the design bearing capacity.	-	X

REQUIRED VERIFICATION AND INSPECTION OF CONCRETE STRUCTURE

TYPE	CONTINUOUS	PERIODIC
1. Inspect reinforcement, including prestressing tendons, and verify placement.	-	X
2. Inspect anchors cast in concrete.	-	X
3. Inspect anchors post-installed in hardened concrete members. a. Adhesive anchors installed in horizontally or upwardly inclined orientations to resist sustained tension loads. b. Mechanical anchors and adhesive anchors not defined in 3.a.	X	-
4. Verify use of required design mix.	-	X
5. Prior to concrete placement, fabricate specimens for strength tests, perform slump and air content tests, and determine the temperature of the concrete.	X	-
6. Inspect concrete and shotcrete placement for proper application techniques.	X	-
7. Verify maintenance of specified curing temperature and techniques.	X	-

MINIMUM SPECIAL INSPECTION REQUIREMENTS OF STRUCTURAL CMU WALLS LEVEL C QUALITY ASSURANCE

MINIMUM SPECIAL INSPECTION		
Inspection Task	Frequency	
	Continuous	Periodic
1. As masonry construction begins, verify that the following are in compliance:		
a. Proportions of site-prepared mortar and grout		X
b. Grade, type, and size of reinforcement connectors, anchor bolts		X
c. Sample panel construction	X	
2. Prior to grouting, verify that the following are in compliance:		
a. Grout space	X	
b. Placement of reinforcement, connectors, and anchor bolts	X	
c. Proportions of site-prepared grout		X
3. Verify compliance of the following during construction:		
a. Materials and procedures with the approved submittals		X
b. Placement of masonry units and mortar joint construction		X
c. Placement of grout	X	
d. Size and location of structural members		X
e. Type, size, and location of anchors, including other details of anchorage of masonry to structural members, frames, or other construction	X	
f. Welding of reinforcement	X	
g. Preparation, construction, and protection of masonry during cold weather (temperature below 40°F (4.4°C)) or hot weather (temperature above 90°F (32.2°C))	X	
4. Observe preparation of grout specimens, mortar specimens, and/or prisms.	X	

REQUIRED VERIFICATION AND INSPECTION OF STEEL CONSTRUCTION

VERIFICATON AND INSPECTION	Continuous	Periodic
1. Material verification of high-strength bolts, nuts, and washers:		
a. Identification markings to conform to ASTM standards specified in the approved construction documents.	-	X
b. Manufacturer's certificate of compliance required.	-	X
2. Inspection of high-strength bolting:		
a. Snug-tight joints	-	X
b. Pretensioned and slip-critical joints using turn-of-nut with matchmarking, twist-off bolt or direct tension indicator methods of installation.	-	X
c. Pretensioned and slip-critical joints using turn-of-nut without matchmaking or calibrated wrench methods of installation.	X	-
3. Material verification of structural steel and cold-formed steel deck:		
a. For structural steel, identification markings to conform to AISC 360.-	-	X
b. For other steel, identification markings to conform to ASTM standard specified in the approved construction documents.	-	X
c. Manufacturer's certified test reports.	-	X
4. Material verification of weld filler materials:		
a. Identification markings to conform to AWS specification in the construction documents.	-	X
b. Manufacturer's certificate of compliance required.	-	X
5. Inspection of welding:		
a. Structural steel and cold-formed steel deck:		
1. Complete and partial joint penetration groove welds.	X	-
2. Multi-pass fillet welds	X	-
3. Single-pass fillet welds > 5/16"	X	-
4. Plug and slot welds.	X	-
5. Single-pass fillet welds < 5/16"	-	X
6. Floor and roof deck welds.	-	X
6. Inspection of steel frame joint details for compliance.		
a. Details such as bracing and stiffening.	-	X
b. Member locations.	-	X
c. Application of joint details at each connection.	-	X

REQUIRED VERIFICATION AND INSPECTION OF STEEL CONSTRUCTION OTHER THAN STRUCTURAL STEEL

VERIFICATION AND INSPECTION	CONTINUOUS	PERIODIC
1. Material verification of cold formed steel deck:		
a. Identification markings to conform to ASTM standards specified in the approved construction documents.	-	X
b. Manufacturer's certified test reports.	-	X
2. Inspection of welding:		
a. Cold formed steel deck:		
(1) Floor and roof deck welds.	-	X
b. Reinforcing steel:		
(1) Verification of weldability of reinforcing steel other than ASTM A706.	-	X
(2) Reinforcing steel resisting flexural and axial forces in immediate and special moment frames, and boundary elements special structural walls of concrete and shear reinforcement.	X	-
(3) Shear reinforcement.	X	-
(4) Other reinforcing steel.	X	-
3. Tectum Deck Attachment to Structure:		
a. Welding	-	X
b. Bolting/anchoring	-	X

REQUIRED VERIFICATION AND INSPECTION OF SPRAYED FIRE-RESISTANT MATERIALS AND FIRE-RESISTANT PENETRATIONS AND JOINT

VERIFICATION AND INSPECTION	CONTINUOUS	PERIODIC
1. Condition of substrates	-	X
2. Thickness of application	-	X
3. Density in pounds per cubic foot	-	X
4. Bond strength adhesion/cohesion	-	X
5. Condition of finished application	-	X
6. Penetration firestop's	-	X
7. Fire-resistant joint system	-	X
8. Floor to wall intersections	-	X
