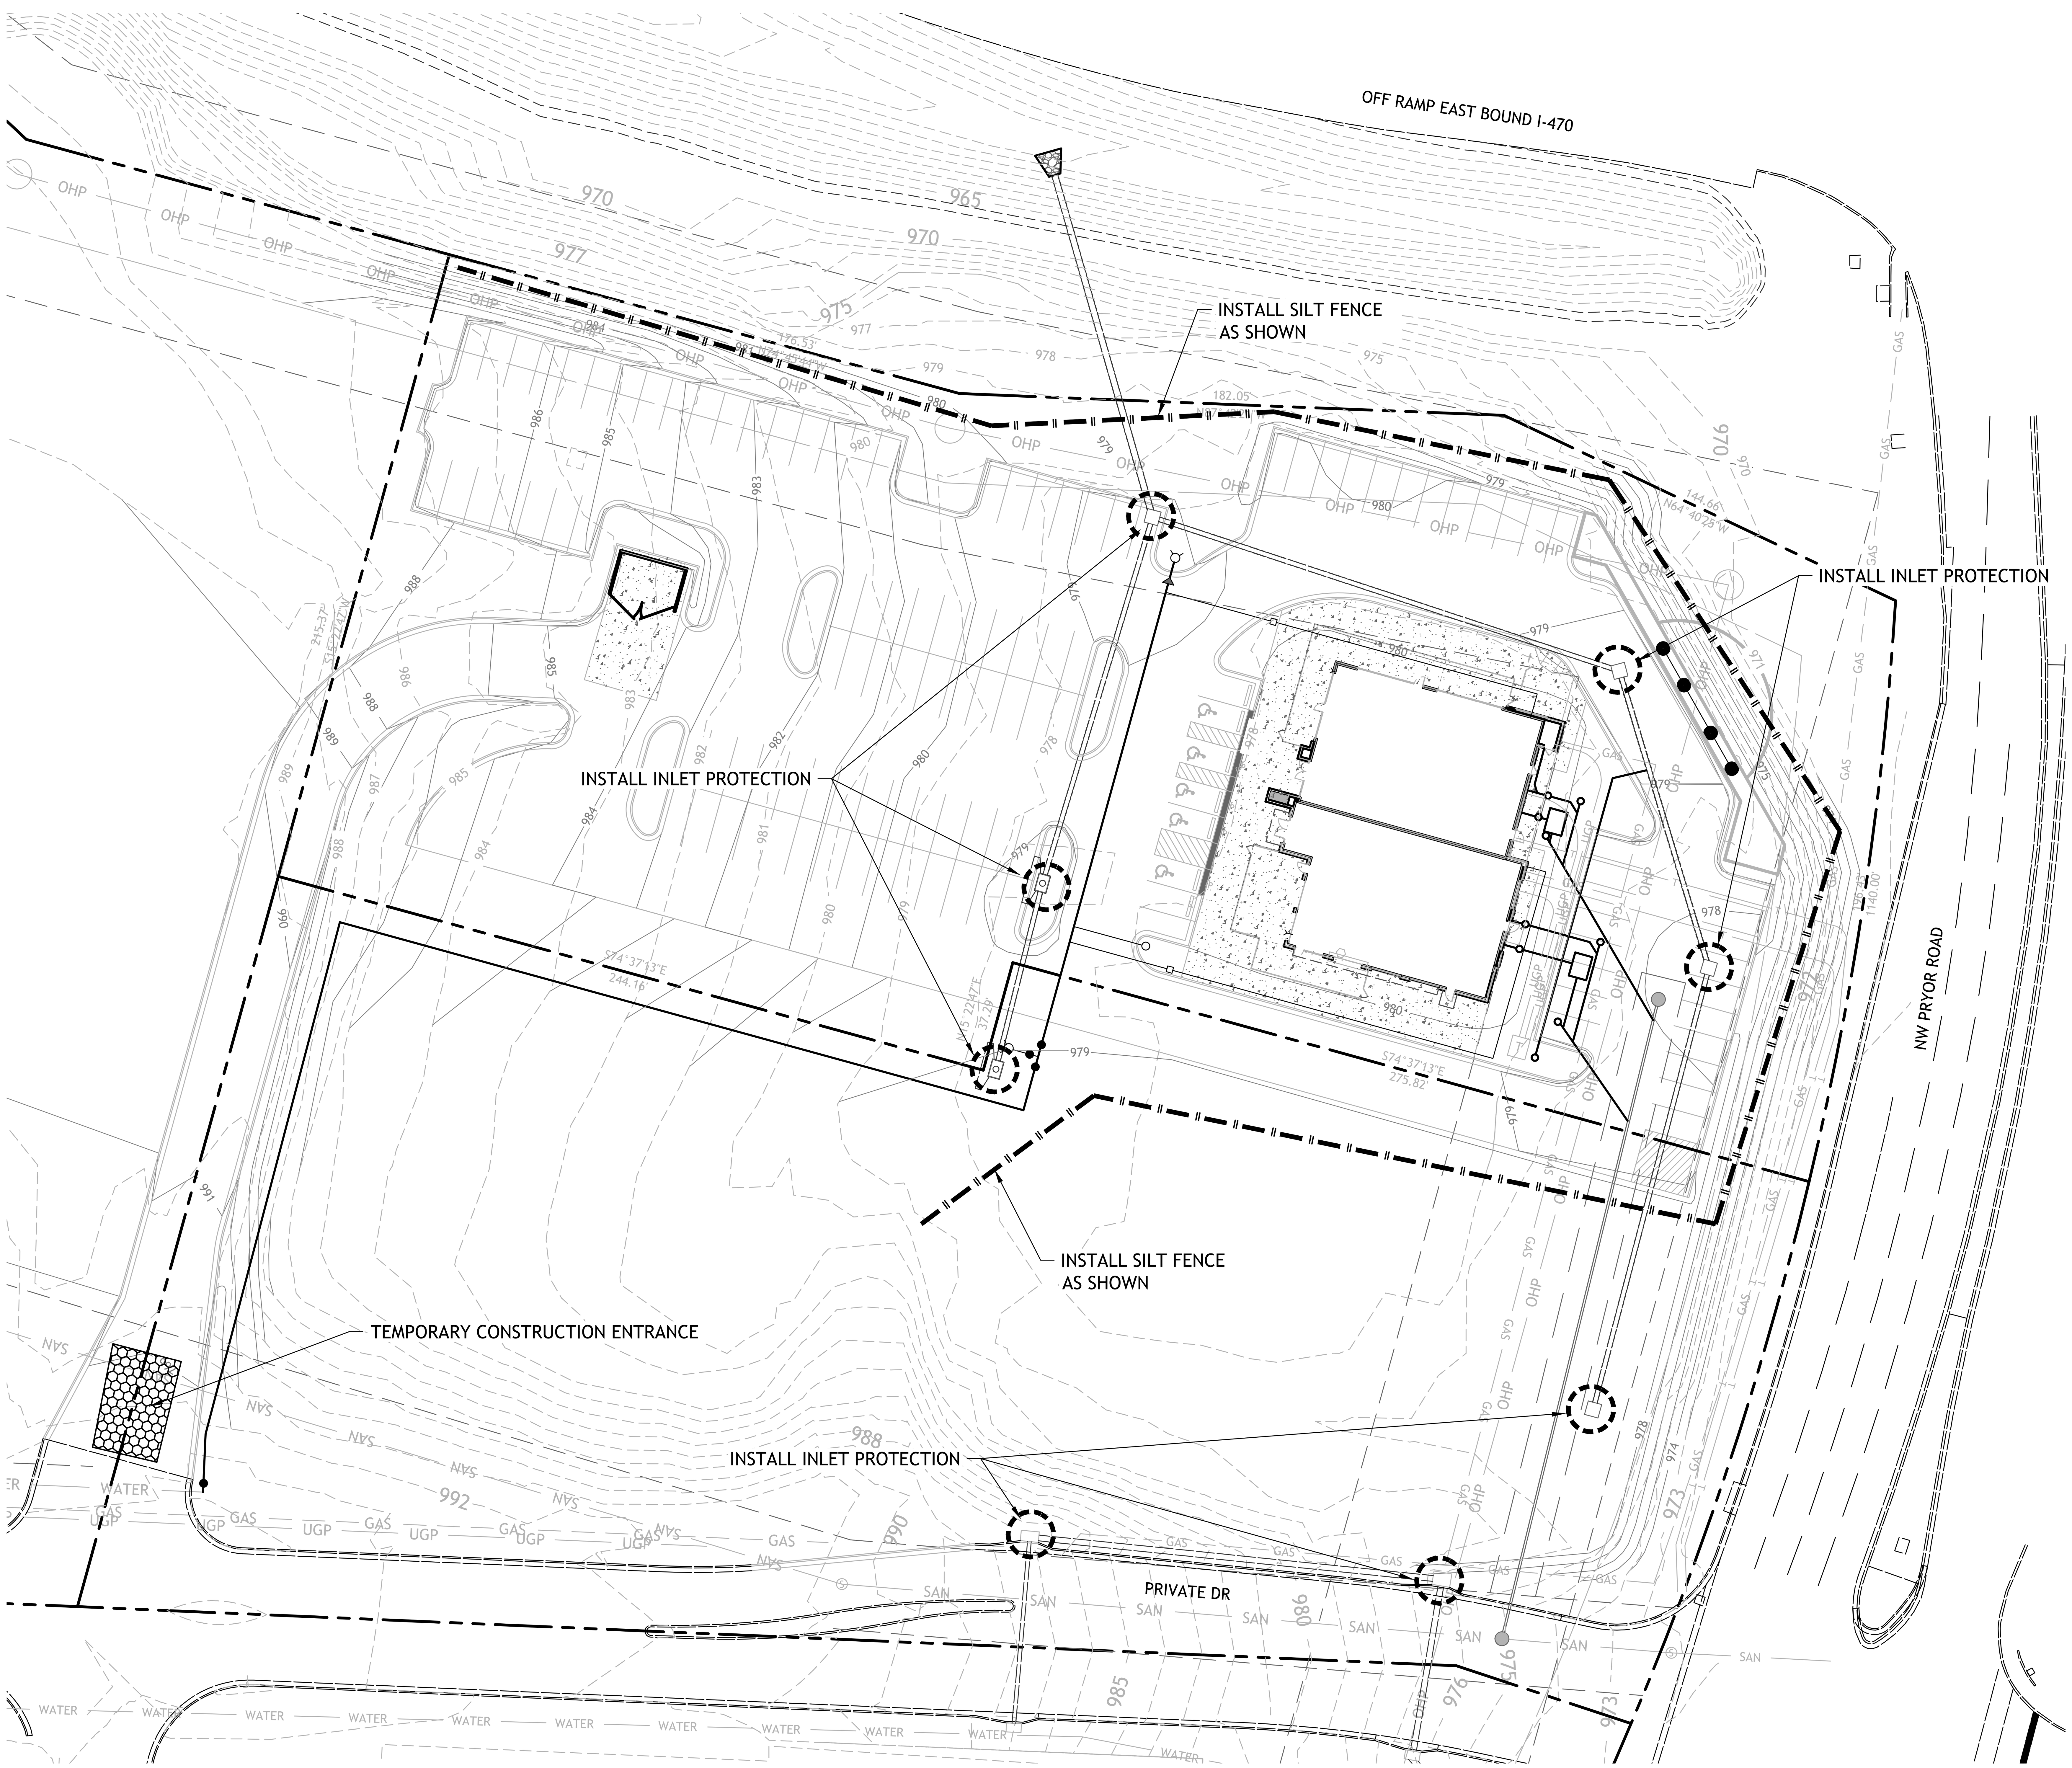
GRADING PLAN

permit
16 SEPTEMBER 2022



NOTES:

1. Prior to Land Disturbance activities, the following shall occur:
   a) Identify the limits of construction on the ground with easily recognizable indications such as construction staking, construction fencing and placement of physical barriers or other means acceptable to the City inspector and in conformance with the erosion and pollution control plan;
   b) Construct a stabilized entrance/parking/staging area;
   c) Install perimeter controls and protect any existing stormwater inlets;
   d) Request an initial inspection of the installed Phase I pollution control measures designated on the approved erosion and pollution control plan. Land disturbance work shall not proceed until there is a passed inspection
2. The site shall comply with all requirements of the MoDNR general requirements
   a) Immediate initiation of temporary stabilization BMPs on disturbed areas where construction activities have temporarily ceased on that portion of the project site if construction activities will not resume for a period exceeding 14 calendar days. Temporary stabilization may include establishment of vegetation, geotextiles, mulches or other techniques to reduce or eliminate erosion until either final stabilization con be achieved or until further construction activities take place to re-disturb the area. This stabilization must be completed within 14 calendar days;
   b) Inspection of erosion and sediment control measures shall be performed to meet or exceed the minimum inspection frequency in the MoDNR General Permit. At a minimum, inspections shall be performed during all phases of construction at least once every 14 days and within 24 hours of each precipitation event.
   c) An inspection log shall be maintained and shall be available for review by the regulatory authority;
   d) The erosion and pollution control plan shall be routinely updated to show all modifications and amendments to the original plan. A copy of the erosion and pollution control plan shall be kept on site and made available for review by the regulatory authority.
3. Temporary seeding shall only be used for periods not to exceed 12 months. For final stabilization. temporary seeding shall only be used to establish vegetation outside the permanent seeding or sodding dates as specified in the Standard Specifications. Final stabilization requires a uniform perennial vegetative cover with a density of 70% over 100% of disturbed area.

4. Erosion and pollution control shall be provided for the duration of a project. All installed erosion and pollution control BMPs shall be maintained in a manner that preserves their effectiveness. If the City determines that the BMPs in place do not provide adequate erosion and pollution control at any time during the project, additional or alternate measures that provide effective control shall be required.

5. Concrete wash or rinse water from concrete mixing equipment. Tools and/or ready-mix trucks. etc. may not be discharged into or be allowed to run to any existing water body or portion of the storm water system. One or more locations for concrete washout will be designated on site, such that discharges during concrete washout will be contained in a small area where waste concrete can solidify in place. Proper signage will be installed to direct users to the concrete washout. Concrete washouts must be handled prior to pouring any concrete.

6. Silt fences and sediment control BMPs which are shown along the back of curb must be installed within two weeks of curb backfill and prior to placement of base asphalt. Exact locations of these erosion control methods may be field adjusted to minimize conflicts with utility construction. However, anticipated disturbance by utility construction shall not delay installation.

7. Required sediment basins and traps shall be installed as early as possible during mass grading. Sediment basins and traps shall be cleaned out when the sediment capacity has been reduced by 20% of its original design volume.

8. All manufactured BMPs such as erosion control blankets, TRMs, biodegradable logs, filter socks, synthetic sediment barriers and hydraulic erasion control shall be installed as directed by the manufacturer.

9. The above requirements are the responsibility of the permittee for the site. Responsibility may be transferred to another party by the permittee, but the permittee shall remain liable by the City of Lee's Summit if any of the above conditions are not met.

Notes for Construction Entrance:

1. Avoid locating on steep slopes, at curves on public roads, or downhill of disturbed area.
2. Remove all vegetation and other unsuitable material from the foundation area, grade, and crown for positive drainage.
3. If slope towards the public road exceeds 2%, construct a 6- to 8-inch high ridge with 3H:1V side slopes across the foundation approximately 15 feet from the edge of the public road to divert runoff from it.
4. Install pipe under the entrance if needed to maintain drainage ditches along public roads.
5. Place stone to dimensions and grade as shown on plans. Leave surface sloped for drainage.
6. Divert all surface runoff and drainage from the entrance to a sediment control device.
7. If conditions warrant, place geotextile fabric on the graded foundation to improve stability.

Maintenance for Construction Entrance:

1. Reshape entrance as needed to maintain function and integrity of installation. Top dress with clean aggregate as needed.

CONSTRUCTION ENTRANCE

Notes for Concrete Washout:

1. Concrete washout areas shall be installed prior to any concrete placement on site.
2. Concrete washout area shall include a flat subsurface pit sized relative to the amount of concrete to be placed on site. The slopes leading out of the subsurface pit shall be 3:1. The vehicle tracking pad shall be sloped towards the concrete washout area.
3. Vehicle tracking control is required at the access point to all concrete washout areas.
4. Signs shall be placed at the construction site entrance, washout area and elsewhere as necessary to clearly indicate the location(s) of the concrete washout area(s) to operators of concrete truck and pump rigs.
5. A one-piece impervious liner may be required along the bottom and sides of the subsurface pit in sandy or gravelly soils.

Maintenance for Concrete Washout:

1. Concrete washout materials shall be removed once the materials have filled the washout to approximately 75% full.
2. Concrete washout areas shall be enlarged as necessary to maintain capacity for wasted concrete.
3. Concrete washout water, wasted pieces of concrete and all other debris from the washout facility shall be transported from the job site in a water-tight container and disposed of properly.
4. Concrete washout areas shall remain in place until all concrete for the project is placed.
5. When concrete washout areas are removed, excavations shall be filled with 6" of compacted backfill and topsoil, any disturbed areas associated with the installation, maintenance, and/or removal of the concrete washout areas shall be stabilized.

The following "Supplementary Conditions" modify the "General Conditions" as if originally written therein. Where a portion of the General Conditions is modified or deleted by these Supplementary Conditions, the unaltered portions of the General Conditions shall remain in effect. The General Conditions may also be modified elsewhere in the Contract Documents by provisions located in other Sections of the Specifications.

ARTICLE 1 - CONTRACT DOCUMENTS

ADD to paragraph 1.2, CORRELATION AND INTENT . . . the following:

"1.2.4 Notes written in the imperative mood refer to action(s) to be performed by the Contractor, the words 'the Contractor shall' are always implied, unless otherwise noted within the Construction Documents.

1.2.5 Figured dimensions and marked data shall take precedence over scaled measurements, and details shall take precedence over smaller scale general drawings."

1.2.6 In case of conflict in or between contract requirements (General and Supplementary Conditions), General Requirements (Division-1 Specification Sections), Drawings, Specifications or manufacturer's product requirements, the Contractor will be deemed to have estimated on, and agreed to provide, the greater quantity and better quality of materials and Work.

1.2.7 If Work is required in conditions making it impossible to execute in an reasonably acceptable manner considering normal industry trade-practices, request an interpretation and clarifications from the Architect before proceeding. If no request is made, no excuses will be subsequently entertained for performance of unacceptable Work."

REPLACE Paragraph 1.5.2 with the following:

"1.5.2 Execution of the Contract by the Contractor is a representation that the Contractor has carefully examined and understands the intent of the Contract Documents, that the Contractor has visited the project site and has thoroughly reviewed the conditions under which the Work will be performed (including but not necessarily limited to labor availability, codes and regulations, hazards, procedures, construction means and methods necessary and weather conditions), and that he/she has correlated his/her personal observations with the requirements of the Contract Documents. No claims will be approved for additional time or costs resulting from the Contractor's lack of familiarization as required herein."

ADD to Paragraph 1.6 - OWNERSHIP AND USE OF DRAWINGS . . . the following:

"1.6.2 If the Contractor obtains any Drawings in electronic media format from the Architect or the Architect's consultants, the Contractor hereby agrees to the following conditions:

1.6.2.1 Electronic media files are considered "Instruments of Service" by the Architect or the Architect's consultants, and the Architect or the Architect's consultant's retain all common law, statutory law and other rights, including the copyright. The transfer of electronic media is not considered a sale by the Architect of tangible goods, and neither the Owner or the Architect or the Architect's consultants makes any warranties, express or implied, of merchantability or of fitness for a particular purpose of the electronic media data.

1.6.2.2 No representation is made regarding the accuracy or completeness of electronic media data. Electronic media data may represent only a portion of the Construction Document information and, as such, it may be incomplete. Electronic media files are not to be considered as official Construction Documents, as differences may exist between the electronic file data and the corresponding hard-copy, signed, sealed and approved Construction Documents used for the project's construction.

1.6.2.3 Any transfer or translation of electronic media data from one computer to another can result in loss of important information and the Contractor assumes that risk. Further, the Contractor understands that the Contractor is responsible for any translation or modification of the electronic media data necessary for use by the Contractor.

1.6.2.4 The Contractor will not use the Electronic Media data for any purpose other than preparation of shop drawings, coordination drawings, or Record Drawings for this Project. The Contractor agrees not to transfer the electronic media data to any entity not involved in the construction Work without the prior written consent of the Architect. The Contractor further agrees to waive all claims against the Owner, the Architect, or the Architect's consultants resulting in any way from any use of the use of the electronic media data. Use of electronic media data

does not reduce or minimize in any way the Contractor's responsibility to take field measurements, check dimensions, and to coordinate with other construction work at the Project Site.

1.6.2.5 Use of electronic media data will be at the Contractor's sole risk and without any liability, risk or legal exposure to the Owner or Architect or Architect's consultants.

1.6.2.6 The Contractor hereby agrees to waive and release all claims or potential claims against the Owner, the Architect, The Architect's consultants, and their respective officers, directors, employees, and agents relating to, or arising out of, the use of electronic media data, by reason of any act or omission of such parties, under any legal theories whatsoever, specifically including the negligence of any party, and including costs for defense.

1.6.2.7 In addition, the Contractor will require all subcontractors or suppliers to whom the Contractor furnishes the electronic media data to sign an identical copy of these terms and conditions. For any party who does not agree in writing to such terms and conditions, the Contractor hereby agrees to defend, indemnify and hold harmless the Owner, the Architect and the Architect's consultants from all claims, suits, expense, damages or loss, including attorney's fees, arising out of Contractor's furnishing such data to third parties."

ARTICLE 2 - OWNER

DELETE the first two (2) sentences of Paragraph 2.4.1 and ADD the following:

"If the Contractor defaults or neglects to carry out the Work in accordance with the Contract Documents and fails within a seventy-two (72) hour period after receipt of written notice from the Owner to commence and continue correction of such default or neglect with diligence and promptness, the Owner may, without prejudice to other remedies the Owner may have, correct such deficiencies."

ADD to Paragraph 2.2.5. the following:

"The Owner will provide one (1) printed set of Drawings and Specifications to the Contractor. Additional copies of Drawings and Specifications may be made by the Contractor at no additional cost to the Owner."

ARTICLE 3 - CONTRACTOR

ADD to Paragraph 3.1 - GENERAL, the following:

"3.1.4 DUTY OF COOPERATION: Issuance of the Construction Documents to the Contractor implies and anticipates continuing and periodic communication between the Contractor and the Architect. Failure to communicate or otherwise notify the Architect of discrepancies or changes made to the project relieves the Architect of responsibility for consequences of such changes.

ADD to Paragraph 3.2 the following:

"3.2.4 Submission of any bid or proposal for the Work of this Project is deemed as a representation that the entity has examined the premises and has satisfied itself as to existing site conditions under which that entity will be obliged to operate. No additional costs for labor, materials or equipment will be allowed for failure to fully examine the site.

3.2.5 Geotechnical information will be made available to the Contractor. The Contractor is to comply with the recommendations of the geotechnical report unless otherwise indicated by the Owner. In the event of conflicting recommendations or several optional methods in such report(s), the Contractor shall submit those options to the Architect in writing. The Contractor shall obtain written clarification from the Architect regarding any conflicting geotechnical recommendations before starting that portion of the Work."

ADD to Paragraph 3.4.2 the following:

"3.4.2.1 After the Contract has been executed, the Owner will consider written requests for substitution of products in place of those specified only under the conditions set in the General Requirements (Division 1 of these Specifications).

3.4.2.2. By making requests for substitutions based on Subparagraph 3.4.3 above, the Contractor: (.1) represents that he has personally investigated the proposed substitute product and determined that it is equal or superior in all respects to that specified, (.2) represents that the Contractor will provide the same warranty for the substitution that the Contractor would have provided for the specified product, (.3) certifies that the cost data presented is complete and includes all related costs under this Contract except the Architect's redesign costs, and waives all claims for additional costs related to the substitution which subsequently become apparent; and (.4) will coordinate the

installation of the accepted substitute, making such changes as may be required for the Work to be complete in all respects."

ADD to Paragraph 3.5 the following:

"3.5.2 The Contractor's warranty required in Paragraph 3.5.1 does not replace, change or otherwise limit any statutory warranty rights of the Owner, or any other Contract requirements. Such warranty is not limited to one (1) year as it is to be governed by the applicable statute of limitations for breach of contract.

3.5.3 The Contractor's contractual obligation to correct Work as defined in Paragraph 12.2 does not limit the Contractor's liability under any applicable statute of limitations, or limit any longer warranty periods required by the Contract Documents, and does not waive any of the Owner's rights under Paragraph 3.5.1 or elsewhere in the Contract Documents or as otherwise provided by law.

3.5.4 It is hereby understood that the failure of any piece of equipment, material, or service provided in this Contract to pass the applicable inspection by Owner and Architect and by any public authorities will constitute a default in performance and that the Contractor warrants that in the event of such failure, it will cause same to be corrected expeditiously and in a manner acceptable to such authorities and to the Owner. If the Contractor does not provide corrections within thirty (30) days after written notice of the default condition, the Owner may provide the corrections and charge the Contractor for all costs incurred plus a ten percent (10%) administrative fee or $500, whichever is greater.

3.5.5 The Contractor's usual warranties (express and implied) shall remain in full force and effect even if a material or equipment item is required by the Owner to be manufactured by a specific entity, and no other acceptable equivalent product manufactured by any other entity is acceptable."

ADD to subparagraph 3.7.1 the following:

"3.7.1.1 The Contractor shall pay for all hook-up charges, 'tap-in' fees, permits and other related expenses related to the construction and full connection or hook-up of all utilities."

ADD to Paragraph 3.10 the following:

"3.10.4 In the event that the Contractor fails to adhere to the schedule, the Contractor will furnish such additional labor and/or services, or work sufficient overtime as may be necessary to make progress conform to the schedule. Failure to adhere to the schedule, or failure to take steps to regain the schedule, shall constitute default within the terms of the Contract."

ADD to Paragraph 3.12.10 the following:

"3.12.10.1 The Contractor will require that any entity engaged to provide design services per Paragraph 3.12.10 will maintain Professional Liability Insurance with minimum limits of $1,000,000 per claim and annual aggregate. Insurance coverage must be maintained not less than one (1) year after Substantial Completion. The Contractor shall provide the Architect with a Certificate of Insurance evidencing coverage prior to performance of services."

ADD to Paragraph 3.15.2 the following:

"Clean-up costs paid by the Owner will be deducted from the Contract Sum if the Contractor fails to respond to the Owner's notice (forwarded via email) within twenty-four (24) hours."

ADD to Paragraph 3.18 the following:

"3.18.3 The indemnitees of Paragraph 3.18.1 will include the Owner, the Architect, the Architect's consultants, and agents and employees of any of them. In addition to the indemnity provided by paragraph 3.18.1, the Contractor shall indemnify and hold harmless the indemnitees from and against claims, damages, losses, liabilities and expenses, including attorney's fees, in the nature of economic loss, damage to the Work itself, and administrative or civil fines and penalties, which the indemnitee suffers or incurs as a result of the acts, errors or omissions of Contractor, its Subcontractors, suppliers of any tier, their agents and employees. Any indemnitee who incurs attorney's fees and legal costs in any action to enforce the Contractor's indemnity obligations shall be entitled to recover the same from the Contractor.

3.18.4 The Contractor agrees to require all Subcontractors performing Work on this Project to include in their contracts with the Contractor a provision requiring the Subcontractors to indemnify and defend the Owner and Architect for any claims arising out of the negligence or breach of contract by the Subcontractors or their employees."

ARTICLE 4 - ADMINISTRATION OF THE CONTRACT

OWNER ADMINISTRATION OF CONSTRUCTION CONTRACT: REVISE Article 4 from Paragraph 4.2, through Paragraph 4.6 inclusive, by substituting the word "Owner", wherever the word "Architect" is used, as the Owner will administer the Construction Contract.

or

ARCHITECT'S LIMITED-SCOPE CONSTRUCTION ADMINISTRATION SERVICES: The Architect's services during construction may be "limited" to a specific hourly maximum, or on an "as-need" basis upon the Owner's request. As the services of the Architect are intended solely for the benefit of the Owner, the Contractor may not rely upon performance of Architect's services. In instances when the Architect is not involved, REVISE Article 4 from Paragraph 4.2, through Paragraph 4.6 inclusive, by substituting the word "Owner", wherever the word "Architect" is used."

REVISE the next to the last sentence of Paragraph 4.2.7 to read as follows:

"The Architect's review does not constitute approval of safety precautions or, unless otherwise specifically agreed to in writing, signed by the Architect, with specific reference to the submittal, of any construction means, methods, techniques, sequences or procedures."

ADD to Paragraph 4.3.7.1 the following:

"Notice of the Contractor's intent to make a claim for additional time must be received by the Architect within seven (7) days of commencement of the event or condition forming the basis for the claim."

ADD the following to Paragraph 4.3.7.2:

"Extensions of time for adverse weather conditions will not considered as a justification for additional compensation to the Contractor for administrative or other 'office overhead' expenses."

DELETE paragraph 4.3.10 and replace as follows:

"4.3.10 The Contractor will be liable to Owner for all direct and indirect, including consequential, damages caused by Contractor's negligence or by its breach of contract, warranty or other actionable conduct. Consequential damages to Owner shall include, but are not limited to, damages for lost revenue or income, rental expenses, loss of use, lost profit, financing and interest charges, damage to business or reputation, loss of management or employee productivity or lost services of such persons."

ADD the following Paragraph 4.7:

"4.7 DEDUCTIONS FOR COSTS OF ARCHITECT'S ADDITIONAL SERVICES:

4.7.1 THE CONTRACTOR WILL BE RESPONSIBLE for costs incurred by the Owner for the additional services of the Architect and its consultants due to the following:

.1 Review of Submittals after an initial review and one (1) re-submittal review;

.2 Responses to Contractor's requests for information when the information was available to the Contractor from careful study and comparison of the Contract Documents, field conditions, or prior project correspondence;

.3 Evaluation of substitutions proposed by the Contractor and subsequent modifications to the Construction Documents resulting from such substitutions;

.4 Additional Site Observation visits due to defects in the Work by the Contractor, or due to the failure of the Contractor to meet the project schedule;

.5 Substantial Completion observations and reports beyond one (1) initial observation and one (1) follow-up observation and report.

4.7.2 THE OWNER WILL DEDUCT the above fees and expenses after submitting a Claim to the Architect for approval by Change Order, without the Contractor's signature or approval. The Contractor may contest any deduction by making a Claim in accordance with Article 4."

ADD the following Paragraph 4.4.9:

"4.4.9 During resolution of any dispute, the Contractor agrees to continue performance of the Work pending resolution. Failure to proceed will constitute a material breach of the Contract, regardless of the ultimate decision on the dispute, it being understood and agreed that any controversy between the parties shall not be deemed a basis to delay or suspend the work, unless agreed to in writing by Owner."

ARTICLE 6 – CONSTRUCTION BY OWNER OR BY SEPARATE CONTRACTORS

ADD to Paragraph 6.1 the following:

"6.1.5. This Contractor is not responsible for the control or management of Separate Contractors, and the Owner releases this Contractor from any liabilities related to work by Separate Contractors. Separate Contractors will be required to comply with all safety requirements established by this Contractor (as applicable), and will not be allowed to interfere with this Contractor's construction operations."

ARTICLE 8 – TIME

Delete Subparagraph 8.3.3 in its entirety.

ADD the following to Paragraph 8.3 – Delays and Extensions of Time:

"8.3.5 The Owner may direct Contractor to work overtime, and to accelerate the Work, and if so instructed, Contractor agrees to work overtime and accelerate the Work. If such direction is not due to causes within the Contractor's control, the Owner agrees to pay for overtime and accelerated Work, but only for related overtime charges which shall consist of the premium or extra hourly wage incurred by the Contractor only. No insurance, taxes, overhead or profit shall be paid by Owner based on any premium wage paid. Written authorization for payment of overtime charges must be received by the Contractor from the Owner in writing prior to performing the Work.

8.3.6 Normal inclement weather and associated site conditions will not be considered as a valid cause for delay of the Work, as it is anticipated that the Contractor will estimate sufficiently for work stoppages due to reasonably anticipated inclement weather within the Construction Schedule.

8.3.7 Notwithstanding the foregoing, if Contractor is delayed in the performance or progress of the Work by Abnormal Weather Conditions (as defined herein) then the Contractor will be entitled to an extension of the completion date for the impacted portion of the Work provided the Contractor makes claim not more than seven (7) days after the cause of the delay begins. "Abnormal Weather Conditions" are hereby defined as temperature and precipitation that are abnormal for the location of the Work as determined by the National Climatic Data Center, Asheville, North Carolina, based on the previous ten (10) year mean for the Work location. Abnormal Weather Conditions and causes beyond the control of the Contractor which delay the work, including but not limited to catastrophic weather events, fire or vandalism, theft, actions or stoppages by public officials, shall extend the completion date by equal periods of time as the delay impacts the critical path of the Construction Schedule, provided the Contractor makes claim not more than seven (7) days after the cause of the delay begins and provides proof of impact on the critical path Work, which is not concurrent with a Contractor-caused delay.

8.3.8 To qualify as an adverse weather day, weather conditions or related site conditions must prevent Work on critical path activities for 50 percent or more of the Contractor's scheduled work day".

ARTICLE 9 - PAYMENT AND COMPLETION

ADD to Subparagraph 9.3.1, the following:

"9.3.1.3 The Owner will retain ten percent (10%) of the amount of each progress payment application until fifty percent (50%) of the Work has been completed. When the Project reaches 50% completion as determined by the Architect, and only if the character and progress of the Work are satisfactory to the Owner and the Architect, the Owner may waive additional retainage for the balance of the Contract, upon recommendation of the Architect and with the concurrence of the Contractor's surety (if any).

9.3.1.4 Funds retained during the initial 50% of the Project shall be held by the Owner until Substantial Completion. If, after 50% completion, the Contractor's performance at any time is deemed deficient by Owner, the Owner reserves the right to reinstate the full ten percent (10%) retainage for the balance of the Project.

9.3.1.5 Upon Substantial Completion, and with the concurrence of the Architect and the Contractor's surety (if any), retainage may be reduced to an amount equal to 200% of the value of the Work remaining to be completed, including defective work not yet remedied (whether covered by a warranty or not) and Work yet to be performed or completed, plus an amount sufficient to protect the Owner for liquidated damages or other charges, liens or offsets due the Owner."

ADD the following to Paragraph 9.3 – Applications for Payment:

"9.3.4 LIENS

Bodily injury:	$ 5,000,000.00	$ 1,000,000.00

If such defects, deficiencies or failures are discovered, the Contractor shall promptly remedy such defect and will assist the Owner in notifying the appropriate Subcontractor or manufacturer, if any, of the nature of the problem and the applicable warranty requirements.

12.2.7 If the Work covered by this Contract has staggered Substantial Completion dates, then the provisions of paragraph 12.2 shall apply separately to each separate portion or area of the Work."

correction costs if work is executed with knowledge that it involves an error, inconsistency or omission - without the above notice.

THE INTENT OF THE CONSTRUCTION DOCUMENTS is to include all items necessary for the proper execution and completion of the Work – and to provide all products, materials, equipment or accessories required for proper operation, in accordance with their manufacturer's requirements. The Contract Documents are complementary – what is required by one shall be as binding as if required by all. While prepared with due care and diligence, perfection is not possible. Design and construction are complex - every possible condition or contingency cannot be anticipated or fully indicated. Any work or material which is not directly or indirectly noted in the Contract Documents, but is necessary for the proper carrying out of the work, is to be understood as "implied" and is to be provided by the contractor in his proposal as fully as if specified, described or delineated.

SPECIFICATION FORMATS AND CONVENTIONS

THE SPECIFICATIONS ARE ORGANIZED into Divisions and Sections based in general on the 50-division format and CSI's "2004 MasterFormat" numbering system.

SECTION IDENTIFICATION: The Specifications use Section numbers and titles to help cross-referencing in the Contract Documents. Sections in the Project Manual are in numeric sequence; however, the sequence is incomplete. Consult the Table Of Contents at the beginning of the Project Manual to determine numbers and names of sections in the Contract Documents.

SPECIFICATION CONTENT: The Specifications use certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. These conventions are as follows:

ABBREVIATED LANGUAGE: Language used in the Specifications and other Contract Documents is abbreviated. Words and meanings shall be interpreted as appropriate. Words implied, but not stated, shall be inferred as the sense requires. Singular words shall be interpreted as plural, and plural words shall be interpreted as singular where applicable as the context of the Contract Documents indicates.

IMPERATIVE MOOD AND STREAMLINED LANGUAGE are generally used in the Specifications. Requirements expressed in the imperative mood are to be performed by Contractor. Occasionally, the indicative or subjunctive mood may be used in the Section Text for clarity to describe responsibilities that must be fulfilled indirectly by Contractor or by others when so noted.

THE WORDS "SHALL," "SHALL BE," OR "SHALL COMPLY WITH," depending on the context, are implied where a colon (:) is used within a sentence or phrase.

PART 2 - PRODUCTS (Not Used)

PART 3 – EXECUTION (Not Used)

END OF SECTION 01 11 00

SECTION 01 29 00 – PAYMENT PROCEDURES

15 DAYS (MINIMUM) PRIOR TO SUBMITTAL OF THE INITIAL APPLICATION FOR PAYMENT, the following items shall be submitted: (1) listing of subcontractors and principal suppliers and fabricators, (2) the progress schedule, (3) preliminary schedule of values, (4) performance and/or payment bonds, if required, and (5) copies of acquired building permits for performance of the Work.

SCHEDULE OF VALUES: Provide a breakdown of the Contract Sum, as required by the General Conditions. Coordinate preparation and correlate line item breakdown with Specification Sections, and as required to facilitate continued evaluation of payment requests and progress reports. Break down principal subcontract amounts into several line items, to the approval of the Owner and/or Architect. Provide a separate line-item for each allowance, or for each unit-cost allowance as a product of the unit cost multiplied by the measured quantity. Indicate temporary facilities or other major cost items that are not a direct cost of actual work-in-place as separate line items. Show overhead and profit as a separate line item amount – to facilitate review of lien-waivers from sub-contractors and material suppliers. Round-off individual amounts to the nearest whole dollar, but with the total equal to the Contract Sum. Arrange the schedule with columns to indicate the generic name of the item, related specification sections, the subcontractor, supplier, manufacturer or fabricator, change orders (numbers) which have affected the value, the dollar value of the item, and the percentage of the Contract Sum to the nearest one- hundredth percent and adjusted to total 100 percent.

PRIOR TO INITIAL PAYMENT APPLICATION SUBMITTAL, the following are required:

- List of subcontractors.
- Schedule of Values.
- Contractor's Construction Schedule.
- Products list.
- Schedule of unit prices.
- Submittals Schedule .
- List of Contractor's staff assignments, and principal consultants.
- Copies of all applicable building permits (except for those obtained directly by the Owner)
- Copies of authorizations and licenses from authorities having jurisdiction for performance of the Work.
- Initial progress report.
- Report of preconstruction conference.
- Certificates of Insurance (AIA G705) and evidence that Contractor's insurance has been secured.
- Performance and payment bonds (if required).

APPLICATIONS FOR PAYMENTS: Use AIA Document G702 and AIA Document G703 Continuation Sheets or an equivalent document approved in advance. Complete every entry on the form, matching data on the Schedule of Values and correlated with the Contractor's Construction Schedule – using updated schedules if revisions have been approved. Notarize and execute by a person authorized to sign legal documents on behalf of Contractor. Each Application shall be consistent with previous applications. Initial Application for Payment, Application for Payment at time of Substantial Completion, and final Application for Payment involve additional requirements. Include amounts of Change Orders and Construction Change Directives as separate line-items.

- TIMING: Unless otherwise noted in the Agreement Form, the required date for submittal will be the tenth (10^{th}) day of each month.

SECTION 01 31 00 – PROJECT MANAGEMENT AND COORDINATION

THE INTENT OF THE CONSTRUCTION DOCUMENTS is to include all items required for completion of the Work. Although the Drawings have been prepared with due care and diligence, design and construction is complex. Consequantially, the Drawings are often diagrammatic - every potential condition or contingency cannot be anticipated or fully indicated, and all components required for complete installation may not be fully indicated.

SCHEDULE AND COORDINATE the Work of the complete Project, including preparation of general coordination drawings, schedules, and control of site utilization, from beginning of construction activities through project close-out.

COORDINATE THE CONSTRUCTION WORK to assure an efficient and orderly sequence of installation of the various construction elements, with provisions for accommodating items to be installed later. Coordinate space requirements and installation of mechanical and electrical Work. Follow routing shown for pipes, ducts, and conduits, as closely as practical; make runs parallel with lines of the building. Utilize spaces efficiently to maximize accessibility for other installations, for maintenance, and for repairs. Conceal pipes, conduits and similar elements whenever possible within the new construction, in finished areas.

PRE-CONSTRUCTION MEETING: Meet with the Owner's and/or Landlord/Developer's construction representatives before starting construction. Discuss procedures and requirements for site access, work hours, parking, deliveries and receiving, debris and waste receptacles, temporary barricade, and construction operations that may be offensive.

MAINTENANCE OF CONSTRUCTION DOCUMENTS: Maintain at the Project Site a "Record Set" of Construction Documents. In addition, maintain copies of the the following related drawings or documents prepared by others:

- Construction Requirements of the Landlord (if applicable)
- Casework shop drawings prepared by the Casework fabricator
- Food Service Equipment layout and rough-in drawings
- Signage shop drawings prepared by the Signage Contractor, and
- Sprinkler and fire-alarm system shop drawings (if applicable)

DO NOT construct or install any portion of the Work related to these drawings at any time without such drawings being available at the site.

MARK REVISIONS made during construction on the Record Set of Documents with colored pencil - do not conceal any Work before revisions have been recorded. Note actual routing of underslab plumbing and utility lines, if different from design drawings.

SECTION 01 32 16 – CONSTRUCTION & SUBMITTAL SCHEDULE

CONSTRUCTION SCHEDULE: Prepare and submit a bar-chart type progress schedule for the entire Project within fourteen (14) calendar days after award of Contract. Provide a separate line-item for each Work item listed in the Schedule of Values. Include appropriate time for project mobilization, procurement of products, review and approval of shop drawings, fabrication, installation, testing, and final cleanup. Identify each calendar day throughout the schedule. Highlight "critical path" elements of the schedule that are important to complete the Work on time. Correlate the schedule with critical "milestone dates" including but not limited to the Notice to Proceed, Substantial Completion, and the Final Completion dates.

SUBMITTAL SCHEDULE: Submit a schedule of planned submittals, arranged in chronological order by dates required by the Construction Schedule. Coordinate the Submittal Schedule with the Construction Schedule durve, and include time required for review and re-submittal (if necessary) when establishing dates. Submit the Submittal Schedule concurrently with the Construction Schedule above - identifying any submittals required during the first sixty (60) calendar days of construction. List any submittals that are required to maintain orderly progress of the Work and those required early because of long lead time for manufacture or fabrication. Failure to provide a Submittal Schedule relives the Architect and/or Engineer of responsibility for timely submittal review..

SECTION 01 60 00 – PRODUCT REQUIREMENTS

PRODUCT OPTIONS - "OR EQUAL" SUBSTITUTIONS PERMITTED: When a material, article, system or piece of equipment is identified in the Drawings or Specifications, it is identified for the purpose of establishing a standard of required function, availability, physical properties, dimension, color, appearance, quality, in-service performance, operation and maintenance. Unless that product is indicated as "no substitutions" or "no-options" within the Construction Documents, the Contractor may substitute ANY product of other manufacturers or vendors which will perform adequately the duties imposed by the specified item, and which will not cause a delay in the construction schedule due to procurement of such item. Substituted products not meeting the intent of the Construction Documents may be rejected by the Architect.

PRODUCT OPTIONS – NO SUBSTITUTIONS: When a material, article, system or piece of equipment is identified in the Construction Documents, it is identified for the purpose of establishing a standard of required function, availability, physical properties, dimension, color, appearance, quality, in-service performance, operation and maintenance. No substitutions will be considered for "named products" (including a manufacturer's product name, make or model number as applicable) unless they are noted as "or equal" or otherwise approved in advance by the Architect. If multiple manufacturers or vendors are listed, provide products only by one of the listed manufacturers or vendors. For products noted as "or equal" or "basis-of-design" products, or for products that are specified by performance requirements, characteristics, and/or referenced standards, provide products of any manufacturer or vendor meeting those requirements and characteristics, which will perform adequately the duties imposed by the specified item, and which will not cause a delay in the construction schedule due to procurement of such item. Substituted products not meeting the intent of the Construction Documents may be rejected by the Architect.

APPLICATION / ACCEPTANCE: Application of a material or equipment item to Work installed by others constitutes acceptance of that Work and assumption of full responsibility for satisfactory installation.

PRODUCTS IN QUANTITIES shall be alike and interchangeable. Where additional amounts of a product are likely to be needed by the Owner at a later date for maintenance and repair, provide standard, domestically produced products which are likely to be available to the Owner at such later date.

SUPPLY PRODUCTS COMPLETE with all standard devices, trim finish, and all accessories indicated in the latest edition of the manufacturer's catalog or brochure published at the date of the award of the Contract. Furnish such items complete with component parts necessary for the obvious and intended use and installation, whether or not descriptions or catalog numbers contain all supplemental information and/or numbers of such components.

EQUIPMENT NAMEPLATES: Provide permanent nameplates on each item of service-connected or power operated equipment. Indicate manufacturer, product name, model number, serial number, capacity, speed, rating, and similar essential operating data. Locate nameplates on an easily accessible surface.

LABELS: Locate required labels and stamps on an accessible surface which, in occupied spaces, is not conspicuous.

MANUFACTURER'S INSTRUCTIONS: Whenever products are required to be installed and/or perform in accordance with a specified manufacturer's instruction or procedure, procure, distribute and maintain at the site copies of such information.

NO ALLOWANCE or consideration will be made for claimed ignorance as to what a cited standard contains, as each tradesman is considered to be experienced and familiar with the published standards of quality and workmanship for his own trade.

PRODUCT WARRANTIES: Submit a draft copy of product warranties or guarantees to the Architect for review when required by other sections of the Contract Documents, prior to execution by required parties.

THE OWNER RESERVES THE RIGHT TO REJECT PRODUCT WARRANTIES that in the opinion of the Owner tend to detract from, or confuse interpretation, of the requirements of the Contract Documents.

STORE PRODUCTS in accordance with manufacturer's instructions, maintaining sensitive materials within temperatures and humidity ranges required by the manufacturer. For exterior storage of fabricated products, place on sloped supports above ground. Cover products subject to deterioration with impervious sheet covering; with ventilation to avoid condensation. Arrange storage to provide access for inspection.

SECTION 01 71 23 – FIELD ENGINEERING

SURVEY THE EXISTING BUILDING FACILITY prior to the start of construction, to document any existing conditions such as cracks, sags, loose materials or other defects of the existing construction. This record shall serve as a basis for determination of subsequent damage resulting from the Contractor's operations at the site.

VERIFY existing horizontal and vertical control points, grades, elevations, dimensions, and other figures shown on the Drawings. Report inconsistencies to the Architect for resolution before commencing work.

WORK LAYOUT: Establish and maintain chalk-lines and other markers necessary to locate all elements of the project, including partitions, casework, electrical and plumbing connections and fixtures. Calculate and measure required dimensions.

DO NOT SCALE THE DRAWINGS to determine dimensions, unless directed to do so.

ESTABLISH & MAINTAIN new benchmarks and other markers to set lines and levels for the Work as needed to properly locate all elements of the Project. Calculate and measure required dimensions by instrumentation or other appropriate means. Do not scale the drawings to determine dimensions, unless directed by the Architect.

TAKE FIELD MEASUREMENTS as required to fit the Work properly. Recheck measurements before installing each product. Where portions of the Work are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

SECTION 01 73 00 – EXECUTION REQUIREMENTS

INSTALLERS INSPECTION OF SUBSTRATE CONDITIONS: Before installation, inspect substrate material and the conditions under which the Work will be performed, report unsatisfactory condition to the Architect. Do not proceed until unsatisfactory conditions have been corrected. Application of a material or equipment item to work installed by others constitutes acceptance of that Work and assumption of responsibility for satisfactory installation.

INSPECT each item of material or equipment immediately prior to installation. Reject damaged and defective items.

PERFORM INSTALLATION WORK by persons qualified to produce workmanship of specified quality, in accordance with manufacturer's printed instructions. Install Work during conditions of temperature, humidity, exposure, forecasted weather, and status of the project completion which will ensure the best possible results for each unit of work.

COMPLY WITH MANUFACTURER'S installation recommendations and requirements, as applicable.

ISOLATE each unit of work from non-compatible work, as required to prevent deterioration.

MAKE ALLOWANCE for expansion, contraction, and building movements.

PROVIDE ATTACHMENT AND CONNECTION devices and methods for securing the work properly as it is installed, true to line and level. Provide uniform joint widths in exposed work, organized for best possible visual effect. Refer questionable visual-effect choices to the Architect for final decision.

COORDINATE CLOSING-IN of work with required inspections and tests, so as to minimize the necessity of uncovering completed work.

PROTECTION: After installation, provide coverings to protect installed products from damage from traffic and construction operations, remove when no longer required.

REPAIR AND REPLACE damaged items, at no additional cost to the Owner. Additional time required to secure replacements and to make repairs will not be considered to justify an extension of time to complete the Work.

SECTION 01 73 29 - CUTTING & PATCHING

DEFINITION: "Cutting and patching" is hereby defined to include cutting into existing construction elements to provide for the installation or performance of other work and the subsequent fitting and patching required to restor surfaces to their original condition. "Cutting and patching" is performed for coordination of the Work, to uncover Work for access or inspection, to obtain samples for testing, to permit alterations to be performed, or for other similar purposes.

DO NOT cut and patch structural elements in a manner that would reduce their load-carrying capacity or load-deflection ratio. Do not cut and patch operating elements or safety related components in a manner that woul result in reducing their capacity to perform as intended, or result in increased maintenance, or decreased operation life or safety. Do not cut and patch construction exposed on the exterior or in occupied spaces, in a manner that would, in the Architect's opinion, reduce the building's aesthetic qualities, or result in visual evidence of cutting an patching. Remove and replace Work cut and patched in a visually unsatisfactory manner.

"CUTTING AND PATCHING" DOES NOT INCLUDE work performed during the manufacturing of products. It does not include the drilling of holes for installation of fasteners or similar operations. Demolition of selected portions of the building for alterations is included in Division-2 Specification Sections.

USE MATERIALS that are identical to existing materials. If identical materials are not available or cannot be use where exposed surfaces are involved, use materials that match existing adjacent surfaces to the fullest extent possible with regard to visual effect. Use materials whose installed performance will equal or surpass that of existi materials.

INSPECTION: Before cutting existing surfaces, examine surfaces to be cut and patched and conditions under whi cutting and patching is to be performed. Take corrective action before proceeding, if unsafe or unsatisfactory conditions are encountered.

PROVIDE TEMPORARY SUPPORT AND PROTECTION of Work to be cut. Protect existing construction durin cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of the Project that might be exposed during cutting and patching operations.

TAKE ALL PRECAUTIONS necessary to avoid cutting existing pipe, conduit or ductwork serving the building, b scheduled to be removed or relocated until provisions have been made to bypass them. Employ skilled workmen t perform cutting and patching. Proceed with cutting and patching at the earliest feasible time and complete without delay.

CUT existing construction to provide for installation of other components or performance of other construction activities and the subsequent fitting and patching required to restore surfaces to their original condition. Cut existir construction using methods least likely to damage elements to be retained or adjoining construction.

IN GENERAL, use hand or small power tools designed for sawing or grinding, not hammering and chopping. Cut holes and slots neatly to size required with minimum disturbance of adjacent surfaces. Temporarily cover opening when not in use. To avoid marring existing finished surfaces, cut or drill from the exposed or finished side into concealed surfaces. Cut through concrete and masonry using a cutting machine such as a carborundum saw or diamond core drill.

BY-PASS UTILITY SERVICES such as pipe or conduit, before cutting, where services are shown or required to b removed, relocated or abandoned. Cut-off pipe or conduit in walls or partitions to be removed. Cap, valve or plug and seal the remaining portion of pipe or conduit to prevent entrance of moisture or other foreign matter after by-passing and cutting.

PATCH with durable seams that are as invisible as possible. Comply with specified tolerances. Where feasible, inspect and test patched areas to demonstrate integrity of the installation. Restore exposed finishes of patched area and extend finish restoration into retained adjoining construction in a manner that will eliminate evidence of patching and refinishing.

WHERE REMOVAL OF WALLS or partitions extends one finished area into another, patch and repair floor and wall surfaces in the new space to provide an even surface of uniform color and appearance. Remove existing floor and wall coverings and replace with new materials, if necessary to achieve uniform color and appearance.

PAINTED SURFACES: Where patching occurs in a smooth painted surface, extend final paint coat over entire unbroken containing the patch, after the patched area has received primer and second coat.

AT EXISTING CEILINGS, patch, repair or rehang as necessary to provide an even plane surface of uniform appearance.

THOROUGHLY CLEAN all areas and spaces where cutting and patching is performed or used as access. Remove completely paint, mortar, oils, putty and items of similar nature. Thoroughly clean piping, conduit and similar features before painting or other finishing is applied. Restore damaged pipe covering to its original condition.

Provide artificial shade and wind breaks and use cooled materials as required. When ambient temperature exceeds 100 deg F, or 90 deg F with a wind velocity greater than 8 mph, do not spread mortar beds more than 48 inches ahead of masonry. CLEAN GLAZING CHANNEL and other framing members to receive glass, immediately before glazing. Remove coatings which are not firmly bonded to substrate. Remove lacquer from metal surfaces where elastomeric sealants are used.

INSTALL glass with uniformity of pattern, draw, bow and roller marks. Install sealants to provide complete wetting and bond and to create a substantial wash away from glass. Install pressurized tapes and gaskets to protrude slightly out of channel, so as to eliminate dirt and moisture pockets.

INSTALL INSULATING GLASS UNITS to comply with recommendations by Sealed Insulating Glass Manufacturers Association, except as otherwise specifically indicated or recommended by glass and sealant manufacturers

PROTECT EXTERIOR GLASS FROM BREAKAGE immediately upon installation, by use of crossed streamers attached to framing and held away from glass. Do not apply markers to surfaces of glass. Remove nonpermanent labels and clean surfaces. Cure sealants for high early strength and durability.

REMOVE and replace damaged glass and glazing. Wash and polish glass on both faces not more than 4 days prior to date scheduled for inspections intended to establish date of substantial completion. Comply with glass product manufacturer's recommendations for final cleaning.

HOWEVER, THE INSTALLER IS RESPONSIBLE FOR PROPER COORDINATION WITH BUILDING STRUCTURE AND THE WORK OF OTHER TRADES. FURNISH ALL REQUIRED BENDS, ELBOWS, FITTINGS, JUNCTION AND PULL BOXES, WHETHER OR NOT SPECIFICALLY SHOWN ON DRAWINGS, THAT MAY BE REQUIRED TO SATISFY CODES AND THE STANDARDS OF GOOD PRACTICE. WHERE CONDUITS FOR BOTH BRANCH AND FEEDER CIRCUITS ARE RUN CONCEALED, THEY MAY BE RUN OUT OF SQUARE TO THE BUILDING PROVIDING THE SHORTEST POSSIBLE RUN IS UTILIZED, RACEWAY SIZES ARE BASED ON THE USE OF COPPER CONDUCTORS AND N.E.C. FILL.

WHERE MORE THAN THREE CURRENT CARRYING CONDUCTORS ARE ENCLOSED IN THE SAME RACEWAY, CONDUCTORS ARE TO BE DERATED PER N.E.C. AND WIRE SIZE INCREASED AS REQUIRED. WHERE THE INCREASED CONDUCTOR SIZE REQUIRES, INCREASE THE RACEWAY SIZE AS WELL. FOR CONTROL WIRING, USE #14 AWG MINIMUM. FOR FIXTURE WIRING, AS PERMITTED BY N.E.C., USE #18 AWG MINIMUM. FOR SIGNAL AND COMMUNICATIONS SYSTEMS USE WIRE SIZE AS SPECIFICALLY REQUIRED BY THE SYSTEM SUPPLIER.

TESTING AND LOAD BALANCING

TEST ALL CIRCUITS TO ASSURE THEM TO BE FREE OF GROUNDS AND SHORTS. LIGHT AND TEST EACH LAMP. PROVE AND TEST THE AVAILABLE VOLTAGE ON THE LOAD SIDE OF EACH DISCONNECT. VERIFY PROPER OPERATION OF THE DISCONNECT. VERIFY THE PHASE SEQUENCE, VOLTAGE, AND ROTATION AT EACH MOTOR IN THE PRESENCE OF THE INSTALLER. RUN EACH MOTOR WITH ITS CONTROL AS NEARLY AS POSSIBLE UNDER OPERATING CONDITIONS FOR A SUFFICIENT LENGTH OVER TIME TO DEMONSTRATE CORRECT ALIGNMENT, WIRING CAPACITY, SPEED, AND OVERALL SATISFACTORY OPERATION. CHECK THAT THE PROPER OVERLOAD HEATERS HAVE BEEN INSTALLED BY READING THE MOTOR NAMEPLATE. ADJUST THE SIZE OF THE OVERLOAD HEATER AS REQUIRED TO MATCH THE MOTOR NAMEPLATE. OPERATE ALL MAIN AND FEEDER SWITCHES AND BREAKERS.

THE VARIOUS BRANCH CIRCUITS SERVED FROM THE LIGHTING PANELBOARDS VARY IN LOADING. CAREFULLY BALANCE THE ACTUAL OPERATING LOAD ON EACH PANELBOARD WHEN ALL LOAD IS TURNED ON AND THE SYSTEM IS OPERATING AT 100% DEMAND, THE UNBALANCE SHALL NOT EXCEED 10%. DURING FINAL INSPECTION, FURNISH THE TEST INSTRUMENTS AND QUALIFIED PERSONNEL TO PERFORM COMPLETE TESTING. COSTS OF ALL TESTING, INCLUDING THE INCIDENT COSTS FOR RETESTING OCCASIONED BY DEFECTS AND FAILURES OF THE EQUIPMENT TO MEET THE SPECIFICATIONS, SHALL BE BORNE BY THE CONTRACTOR.
