Re: 3000 NW Audubon Lane
Winterset Valley
Lee's Summit, MO

The rear retaining wall was constructed from 10/6/22 to 10/21/22. Daily, I observed the construction of the retaining wall.

I confirmed that the excavation for the wall was completed down to rock and built up from there. I verified the material used were per the design requirements. I confirmed the geogrid placement was per the design drawings. I confirm that compaction of the aggregate was completed in lifts per the design requirements.
