DRAIN TILE – WATERPROOFING - SUMP PUMPS - CRACK REPAIRS - SILT FENCE

DATE: 7/6/2023

TO: Lee's Summit MO. Building Inspections

Builder: Drippe Homes
Re: 3219 SW Enoch St Lot 104

Dear Codes Supervisor,

On 1/3/2023, Gordon Energy & Drainage did the following work at the above referenced Address, however, this foundation was inadvertently backfilled before receiving a passing pre-backfill inspection.

The purpose of this letter is to request a passing inspection, without the builder needing to dig up the dirt around the foundation.

Our company did the following work:

Sprayed Mulseal damp proofing and patched the lower exterior wall ties around all habitable living space on the foundation. Installed 4" perforated drain tile with sock on the footing on the exterior, and 3" perforated drain tile on the interior. The drain tile system is continuous and terminates to a 24" sump pit. This can be verified on site. All lumber was removed from around the foundation.

Please contact me if a passing inspection CAN NOT be issued.

Sincerely,

Todd Mitchell
