Kaw Valley Engineering (KVE) was on site to perform in-place density tests on soil and/or aggregate materials.

Material: Primarily red-brown clay, with mixtures of other clay soil types found on-site in varying proportions

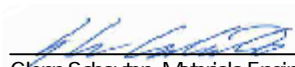

Our representative performed in-place moisture and density tests using a nuclear density gauge. Test results are presented on the attached sheet(s).

Based on our observations as described above, the materials and procedures at the time of our site visit were in general conformance with the construction documents.

On-site personnel were verbally informed of the observations and test results.
