2. Air entrain all exterior concrete (admixture: ASTM C 260).
3. Do not use calcium chloride admixtures under any circumstances.
4. Reinforcing bars: ASTM A 615 Specifications, Grade 60, deformed. Bend bars cold.
5. Welded wire fabric (WWF): ASTM A 185.
6. Maintain minimum concrete coverage for reinforcing as indicated, unless noted otherwise. Reference details 17/S1.0 and 18/S1.0 for placement of reinforcement in typical framed slabs.
   a. 3 in. clear where concrete is deposited directly against earth.
   b. 2 in. clear where concrete is exposed to earth or weather but poured against forms for bars larger than #5.
   c. 1-1/2 in. clear where concrete is exposed to earth or weather, but poured against forms for bars #5 or smaller.

SHORT-CIRCUIT FAULT CALCULATIONS

Distances are for calculation purposes only and shall not be used for contractor takeoffs nor bidding - Contractor shall notify Engineer of any field condition that results in a change of 10% or greater circuit distance.

The following calculations are based on the "Point-by-Point" method where:

ISC(2) = ISC(1) x M(1) — M = 1/(1+f)
Where:
ISC(1) - short circuit current at fault point 1
ISC(2) - short circuit current at fault point 2

Feeder: f(3Ø) = 1.732 x L x Isc / C x E
Feeder: f(1Ø) = 2 x L x Isc / C x E

XFMR: f(3Ø) = Ip(sca) x Vp x 1.732 x %Z / 100,000 x kVA
XFMR: f(1Ø) = Ip(sca) x Vp x %Z / 100,000 x kVA

Is(sca) = Vp x M x Ip(sca) / Vs

L - Length of Conductor
E - Line to line volts
C - "C" Factor from Bussman table where "C" = 1 / impedance per lineal foot

Ip - Primary short circuit current
Vp - Primary voltage
Is - Secondary short circuit current
Vs - Secondary voltage

Feeder Types:
NM - Non Magnetic Conduit, M - Magnetic Conduit, FB - Feeder Busway, PB - Plug-in Busway, HI - High Impedence Busway, TX - Transformer
