The diagram illustrates the connection of a second-story wall to a first-story wall and foundation, showing three framing methods: Platform Framing, Intermediate Bearing Wall, and Balloon Framing.

**Platform Framing (Left):** Shows a first-story wall with a sill plate on a crawl space or basement foundation. A second-story wall is built on top of the first-story wall. The connection is made using a top plate and bottom plate. A band joist or blocking is used to secure the second-story wall to the first-story wall. The floor joist is shown, and the second-story wall is built on top of it. The second-story wall is labeled "SECOND STORY".

**Intermediate Bearing Wall (Middle):** Shows a first-story wall with a sill plate on a crawl space or basement foundation. A second-story wall is built on top of the first-story wall. The connection is made using a top plate and bottom plate. A band joist or blocking is used to secure the second-story wall to the first-story wall. The floor joist is shown, and the second-story wall is built on top of it. The second-story wall is labeled "SECOND STORY".

**Balloon Framing (Right):** Shows a first-story wall with a sill plate on a monolithic slab-on-grade foundation. A second-story wall is built on top of the first-story wall. The connection is made using a top plate and bottom plate. A band joist or blocking is used to secure the second-story wall to the first-story wall. The floor joist is shown, and the second-story wall is built on top of it. The second-story wall is labeled "SECOND STORY".
