Figure A

SILT FENCE LAYOUT  
Not to Scale

Modified from 2015 Overland Park Standard Details  
for Erosion and Sediment Control.

- Notes:**
- In order to contain water, the ends of the silt fence must be turned uphill (Figure A).
  - Long perimeter runs of silt fence must be broken up into several smaller segments to minimize water concentrations (Figure A).
  - Long slopes should be broken up with intermediate rows of silt fence to slow runoff velocities.
  - Attach fabric to upstream side of post.
  - Install posts a minimum of 2' into the ground.
  - Trenching will only be allowed for small or difficult installation, where slicing machine cannot be reasonably used.

- Maintenance:**
- Remove and dispose of sediment deposits when the deposit approaches 1/2 the height of silt fence.
  - Repair as necessary to maintain function and structure.
