

**MEMO****DATE** 10/14/2020**PROJECT** West Pryor Village Traffic Impact Study

TO Mr. Michael Park, P.E., PTOE
 City Traffic Engineer
 City of Lee's Summit – Public Works
 220 SE Green Street
 Lee's Summit, MO 64063

FROM Lisa VanDenBerg, P.E.

SUBJECT New West Pryor Village Site Plan Effects from Previous 2018 Traffic Impact Study

MEC completed an updated analysis comparing the trips generated by the previous site plan update completed September 2018 with the new 2020 proposed site plan. Both site plans are attached to this memo for reference. The larger changes between the site plans are the conversion of the single-family homes to townhouses, the reconfiguration of the apartment from one to two buildings (although about same number of units), the addition of more restaurants and small pockets of retail space and the change in some restaurants from sit-down to fast food.

The trips for the study site were generated using information from the data compiled by the Institute of Transportation Engineers (ITE) in their report Trip Generation Manual, 10th Edition, which contains updated trip generation data and equations. A full breakdown of trips generated for both site plans are attached as part of the Appendix of this memo. Below, in Table 1, shows the total trips generated by each site plan as well as the difference of trips generated by each site plan. As can be seen, the number of trips generated between the two site plans is fewer daily trips but more trips occurring during the peak hour. This is primarily because of the restaurant uses that are typically visited during the peak hours and not frequented as much throughout the day. There is a 5.5% overall decrease in daily trips generated, an increase of 25% of trips during the morning peak hour, and an increase of 19% during the evening peak hour.

Table 1 - Trips Generated by Site Plan and Comparison

	Daily	AM Total	PM Total	AM Enter	AM Exit	PM Enter	PM Exit
2018 Site Plan	21,084	1,307	1,781	678	629	988	793
2020 New Site Plan	19,939	1,632	2,107	884	749	1,190	939
Difference between 2018 and 2020 Site Plan	-1,145	325	326	206	120	202	146

While these peak hour trips are distributed between many access drives, an analysis of the impact of these additional trips was completed to ensure that acceptable levels of operation are still attained. Table 2 below shows the existing levels of service (LOS) prior to any improvements, as well as the LOS for the complete development (final design) for both the September 2018 site plan update as well as the LOS for the new 2020 site plan.

The updated traffic volumes based on the different scenarios were input into the proposed Synchro files. The signal timings were not adjusted for a direct comparison as to how the traffic volumes impact operations. As expected, the LOS does not change much between the 2018 and 2020 site plans. No signalized intersection has a LOS lower than C, which is still acceptable per the City of Lee's Summit's "Level of Service Policy." The right-in, right-out would function at LOS C during the PM peak hour instead of LOS B. Black Twig Lane and Chipman Road, an unsignalized intersection, does still have a LOS B during the AM peak hour and LOS E during the PM peak hour. The signalized intersection at Lowenstein Drive would experience an overall LOS C during the PM peak hour but at 28.6 seconds of delay, this is well within the lower range of LOS C.

Table 2 - 2018 and 2020 Final Development LOS Comparison

Intersection	2018 Existing AM LOS	2018 Existing PM LOS	Final Design AM LOS (2018)	Final Design PM LOS (2018)	Final Design AM LOS (New-2020)	Final Design PM LOS (New-2020)
I-470 South Terminal	B	B	B	C	B	C
Summit Woods						
Crossing	A	B	B	C	B	C
Right-In, Right-Out	N/A	N/A	B*	B*	B*	C*
Lowenstein Drive	B/C*	D/E*	B	B	B	C
Chipman Road & Pryor Road	C	C	C	C	C	C
Black Twig Lane & Lowenstein Drive	A*	A*	A/B*	A/B*	B/B*	B/B*
Black Twig Lane & Chipman Road	B*	C*	B*	E*	B*	E*

When considering the movement LOS, there are more slight changes. Exhibit 3 from the previous report is attached to this memo with the movement LOS for the final development included in red for comparison. This exhibit also shows a change in expected 95%-ile queue lengths where it had previously been reported. While there are slight changes in some, overall, the movement LOS remain the same. As stated in the last memorandum, it is important to note, that the priority is given to the Pryor Road corridor over the intersecting side roads that provide access to the development. Adjustments in signal timings can result in a better movement LOS to the side roads, while a slight decline would be seen for movements on Pryor Road. Overall, the intersection LOS would remain nearly the same if these adjustments were to be made.

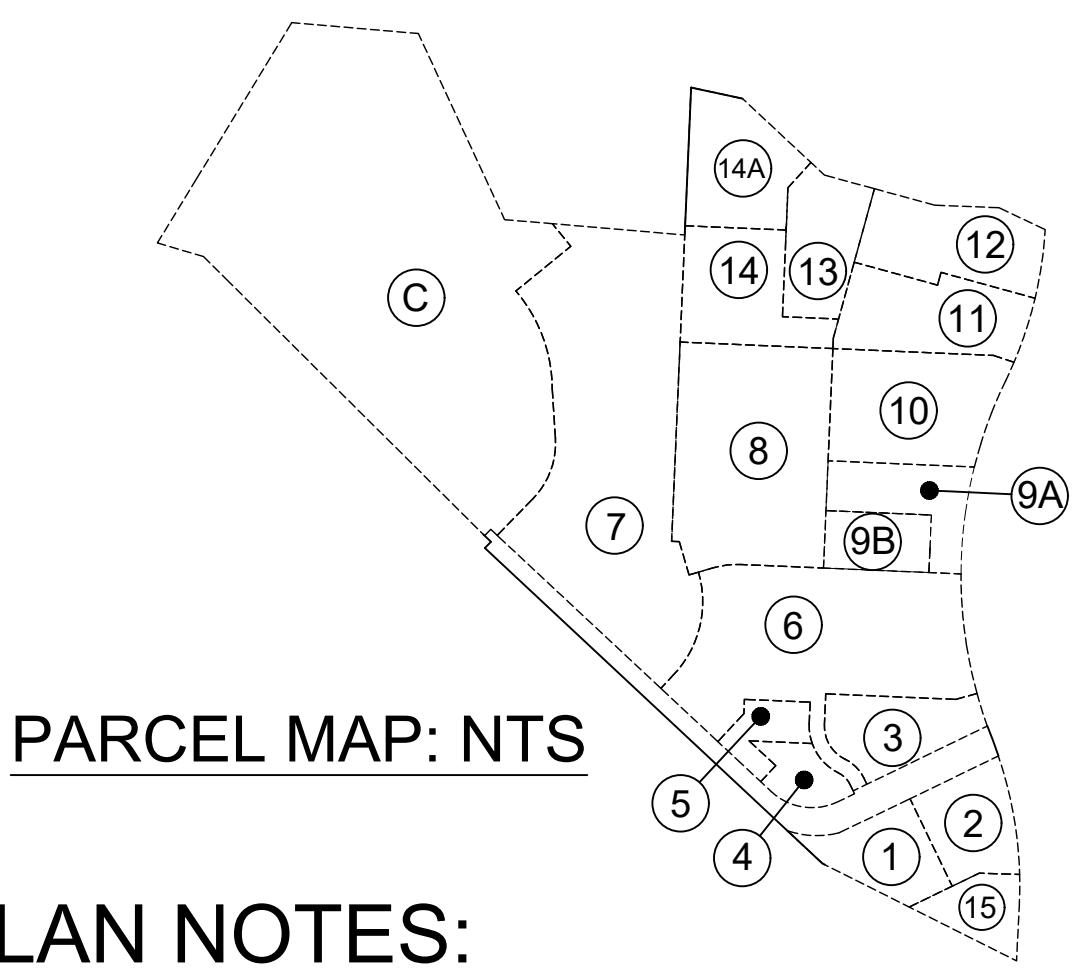

Traffic volumes at the intersection of Black Twig Lane and Chipman Road were checked against criteria for consideration of traffic signal installation. The intersection would not meet signal

warrant criteria for any of the three volume-based warrants in the Manual on Uniform Traffic Control Devices (MUTCD).

Volumes for the intersection of Black Twig Lane and Lowenstein Drive were checked against the criteria for potential placement of a multi-way stop condition using guidelines in the MUTCD. The volume-based criteria were unsatisfied. Therefore, the side street stop control condition should be used.

Figures 4 and Figure 5 of the appendix detail the distribution of trips for both the 2018 Site Plan and the 2020 Site Plan at the two Black Twig intersections. Figure 6 shows the difference in the number of trips between these two site plans for both the Black Twig/Lowenstein intersection and the Black Twig/Chipman intersection.

As the LOS are expected to stay at acceptable levels, the previous study's recommendations hold true. As roadway and intersection construction has been completed based on the recommendations, further improvements to the access drives along Pryor Road and along Lowenstein Drive are not suggested at this time.
