Re: Response to Comments
Field Test Evaluation Report
Mine Remediation at Streets of West Pryor
Lee's Summit, Missouri
Geotechnology Project No. J035637.02

Dear Mr. Olson,

Geotechnology, LLC provided a Revised Mine Remediation Plan dated May 6, 2021 for the referenced project. This report included recommendations for a Field Test Evaluation. Results of the Field Test Evaluation were presented to you in a report dated July 25, 2021. In response to comments from a third party, the report was re-issued on September 1, 2021. Adjustments were made in calculations for roof beam overstress in tension the September report to be in general accordance with the intent of the remediation plan, which is to preclude vertical propagation of a potential roof failure. It is our opinion that the revised calculations are appropriate to achieve satisfactory factors of safety for overall mine stability.

We appreciate the opportunity to provide the geotechnical services for this project. If you have any questions regarding this report, or if we may be of any additional service to you, please do not hesitate to contact us.

Respectfully submitted,

GEOTECHNOLOGY, LLC

Andrea Prince, P.G.
Senior Project Manager
