RE: PL2023039: Engineering Plan Review for THE PRINCETON - Detention Basin Conversion to Permanent Pool

Anderson Engineering (A/E) has received your comments dated March 9th, 2023 and have the following responses:

The Development Services Department has completed its review of the above-referenced plans and offer the following comments listed below.

- See comments below to determine the required revisions and resubmit to the Development Services Department public portal located at devservices.cityofls.net. Digital documents shall follow the electronic plan submittal guides as stated below.
- Revised plans will be reviewed within five (5) business days of the date received.

Engineering Review - Corrections

1. The plans appear acceptable, but the stormwater memorandum should be revised to include a section on why an emergency drain is not being provided. It should also be revised to include a brief discussion that the existing basin will be excavated on the bottom, and hence the storage volume will not be reduced since the permanent pool elevation will be slightly below the existing detention basin bottom.

A/E Response: The drainage memo has been updated to address above comments.

2. An itemized cost estimate should be included in the final submittal drawings for purposes of calculating the Engineering Plan Review and Inspection Fee. Items to include in the estimate include: 1) grading, 2) rip rap, 3) erosion and sediment control measures, and 4) final restoration including sodding, seeding, fertilizer, mulch, and topsoil. It is not necessary to include the retaining walls or aerator.

A/E Response: A cost estimate has been included with the current submittal.

Traffic Review – No comments

THE BEST PLACE TO WORK WITH AND THE BEST PLACE TO WORK FOR

In order to calculate the Engineering Plan Review and Inspection Fee, a sealed Engineer's Opinion of Probable Construction Costs shall accompany your final submittal copies. The itemized estimate (material and installation) shall be sufficiently broken down and shall include the following items, as applicable.

- Public infrastructure, both onsite and offsite.
- Private street construction, including parking lots and driveways.
- Sidewalks located within the right-of-way.
- ADA accessible ramps.
- Sanitary sewer manholes and piping between manholes, including private mains.
- Connection of the building sanitary sewer stub to the public main.
- Waterlines larger than 2 inches in diameter, valves, hydrants, and backflow preventer with vault, if outside the building.
- Stormwater piping greater than 6 inches in diameter, structure, and detention / retention facilities – public or private.
- Water quality features installed to meet the 40-hour extended duration detention requirements.
- Grading for detention / retention ponds.
- Grading to establish proper site drainage.
- Utility infrastructure adjustments to finished grade (i.e. manhole lids, water valves, etc.).
- Erosion and sediment control devices required for construction.
- Re-vegetation and other post-construction erosion and sediment control activities.

A/E Response: Acknowledged.

Please feel free to contact me with any additional questions or comments.

Thank you,

Trevor Fox, P.E.
