Re: Long-Term Monitoring Plan Survey Points
Lots 7A (Area A), 7B (Area C), and 7C (Area B)
Mine Remediation at Streets of West Pryor
Lee's Summit, Missouri

Dear Mr. Olson,

This document serves to convey the results of the settlement monitoring that was conducted on the Streets West of Pryor project for the month of January 2023. This report has been updated with information provided by the surveyor, which has been documented in the updated Figure 2. During this monitoring period, potential ground movements were monitored using a combination of surface monitoring points (SMPs) and survey points that were established on sanitary and storm sewer inlets and/or manholes. Surveys of SMPs were performed by BHC, Inc. SMP C106 continued to remain covered with fill during this data collection period and has been omitted from figures. SMP B107 was covered by equipment. SMP C109, which was previously covered with construction equipment, has remained uncovered for this monitoring period. Additional data points will be added to the monitoring record as they become available, and updated settlement monitoring results will be provided.

Table 1 and graphic plots show the updated data for SMPs. The current survey readings were obtained on January 5, 2023, in general accordance with the Long-Term Monitoring Plan (LTMP). Table 1 documents the monitoring events to date and Exhibit 1 presents the graphic plots that depict the data obtained in relation to elapsed time. The installations of the sleeved rod monuments have been completed, and elevation data recorded.

Based on the current set of data and field observations, the monitoring results do not indicate that settlement has exceeded the limits established in the LTMP. Therefore, planned readings will continue every two months for the duration of surface construction. The attachments included in this report provide the current results of the LTMP.

GENERAL NOTES

- Basis of Bearings: Initial Monitoring control was derived from GPS Static data collected on several of the Monitoring Control Points and submitted to OPUS for data processing. The OPUS provided data was referenced to the Missouri State Plane Coordinate System, West Zone (NAD83). The coordinates derived from this OPUS solutions were then adjusted to ground using the CAF from the Final Plat of "Streets of West Pryor Lots 1 thru 14, Tracts "A", "B", "C", & "D". Using the CAF from the above mentioned plat allows the monitoring points to be on a similar datum to the proposed site design. The ground coordinates were scaled from zero using the CAF of 0.99990084.
- The monitoring control and the initial monitoring points were then traversed using a Trimble SX10 instrument and subsequently adjusted using MicroSurvey StarNet Version 9 software. A level run was run through control point 10 thru 13 to assist in establishing the initial monitoring control.
- Base Line Control Points were intentionally placed off of the site in order to avoid placing them over areas of the mine that are currently being remediated.
- This monitoring survey is based on field work completed on the date shown in the title block.
- Monitoring points are labeled to indicate which section of mine remediation zone that they are closest to and a point number to assist in the survey monitoring. Example A100 = "A" indicates the "A" remediation zone and "100" is the survey point used while monitoring.
- It has been indicated that some of the inlet lids will be moved during the progress of the construction. It has been requested that when the inlets are being adjusted that monitoring will be taken before and after the inlet has been adjusted in order to maintain a viable monitoring point that will be maintained through the monitoring term.
- Long Term Monitoring Monuments are deep driven rods drilled into the bedrock below the surface with aluminum caps and located in Monument Boxes on the surface.
- LTM-01 location is estimated. Monument location was relocated to help avoid possible future conflicts and it's current location has not been confirmed.

Note: Lid replaced and mark removed on Inlet A-1

after initial monitoring. Point's 104-106 above are new

or replacement monitoring points on the site.

Note: Point's 10-14 on previous exhibits are Control Point's for monitoring and have been removed to simplify exhibit. Points 100-103 are monitoring points as shown on the exhibit. Monitoring Point #100 is on an Inlet @ NE Corner of Site

Inlet Lids on Structures B-1 and A-3 have been adjusted since the initial monitoring. The new location of points will now be monitored.

6/1/2022

Note: The certification on this exhibit is to verify that the horizontal and vertical positions shown herein were collected under my direct supervision. This certification does not intend to show anything other what is shown on the exhibit. We are not certifying any reason or cause for the differences in the locations or elevations.

Long Term Monitoring Monuments

Note: Differences Below Between

Oct 31, 2022 & Jan 5, 2023

0.00	975.06	LTM-01
-0.01	977.86	LTM-02
-0.01	987.87	LTM-03
-0.02	987.49	LTM-04
0.01	985.20	LTM-05
Disturbed, Needs Reset		LTM-06
0.00	971.82	LTM-07

Note: Long term monitoring will
concentrate on the vertical differences
between observations, unless
otherwise noted.

Note: The certification on this exhibit is to
verify the vertical positions shown hereon
were collected under my direct supervision.
This certification does not intend to show
anything other what is shown on the exhibit.
We are not certifying any reason or cause
for the differences in elevations.

Monitoring Point Displacement Summary

Streets West of Pryor

Lee's Summit Missouri

Displacement for A100

Date	Elevation Change (ft)	Elevation (ft)	Time Elapsed (yr)	Elevation Change (in)	Total Elevation Change (in)	Rate (in/yr)	Remarks
10/12/2021	NA	992.88	NA	NA	NA	NA	
12/12/2021	-0.03	992.84	0.17	-0.48	-0.48	-2.87
