

1. Please provide information on how the existing water line location was determined as it differs from the City's mapping information. **A note was added to the plan. Water line location is from marking by One Call and located by my field crew**
2. A 10 foot wide utility easement will need to be dedicated along the City's new right-of-way line, unless you can document that there is already one in place. **We have shown a Utility Easement on the exhibit and added text to the legal description**
3. Label the line with the open circles so it is clear what it represents. **Completed**

Sincerely,

John B. Young, President
