INTRODUCTION

The purpose of this traffic impact study is to assess the potential impact on traffic with the Cobey Creek mixed use development on the northwest corner of the intersection of Doc Henry Road and Highway 150 in Lee's Summit, Missouri. The location of the development in relation to the street network is shown in Figure 1. The site plan for the development is shown in Figure 2.

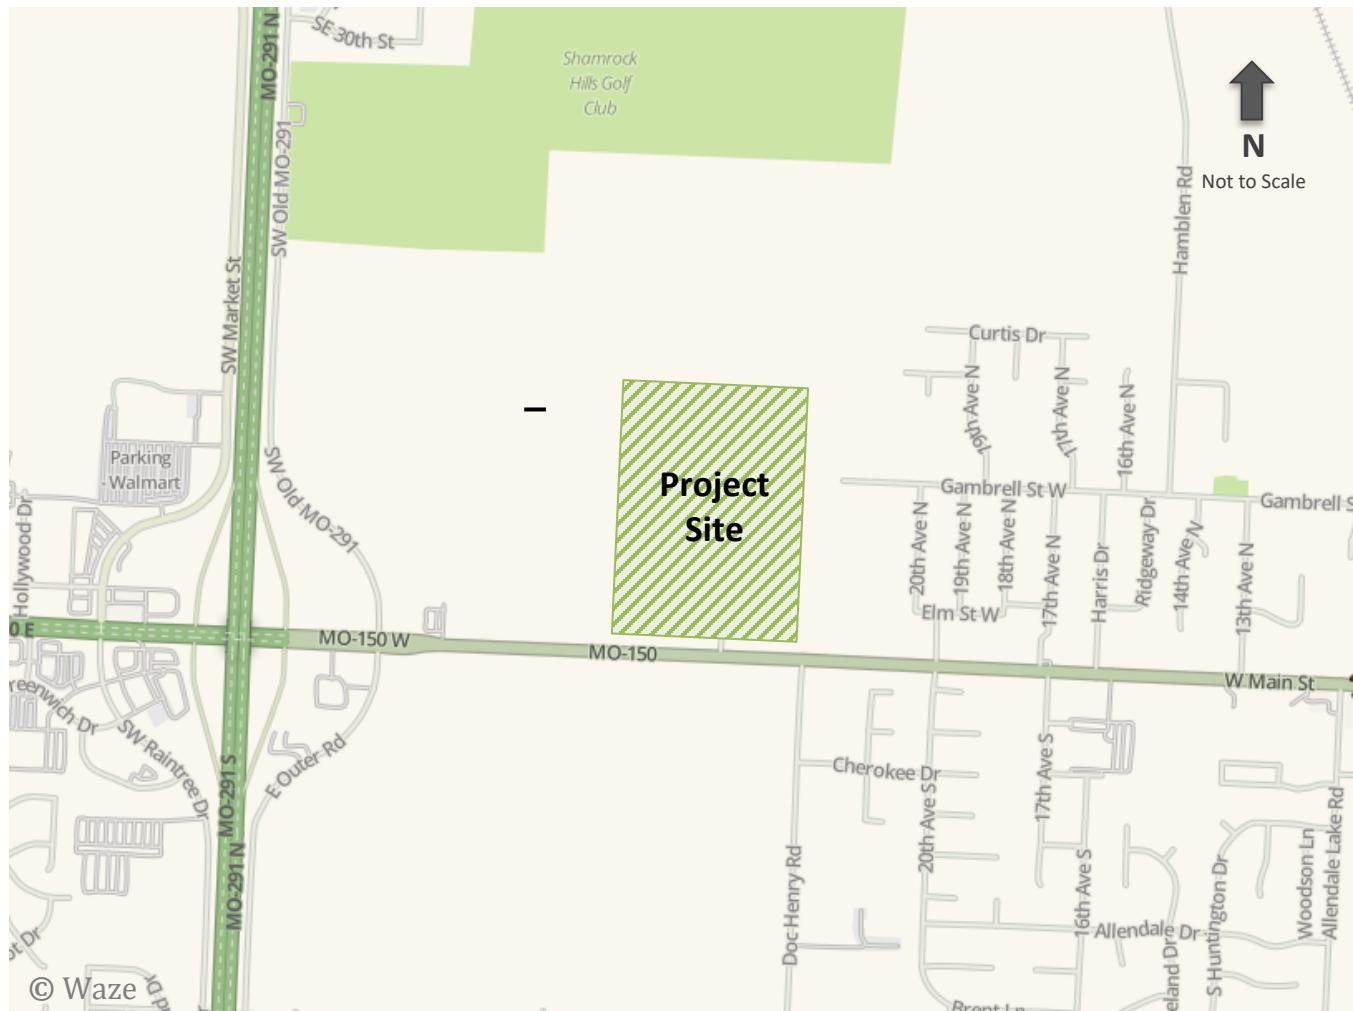

Figure 1 – Development Location

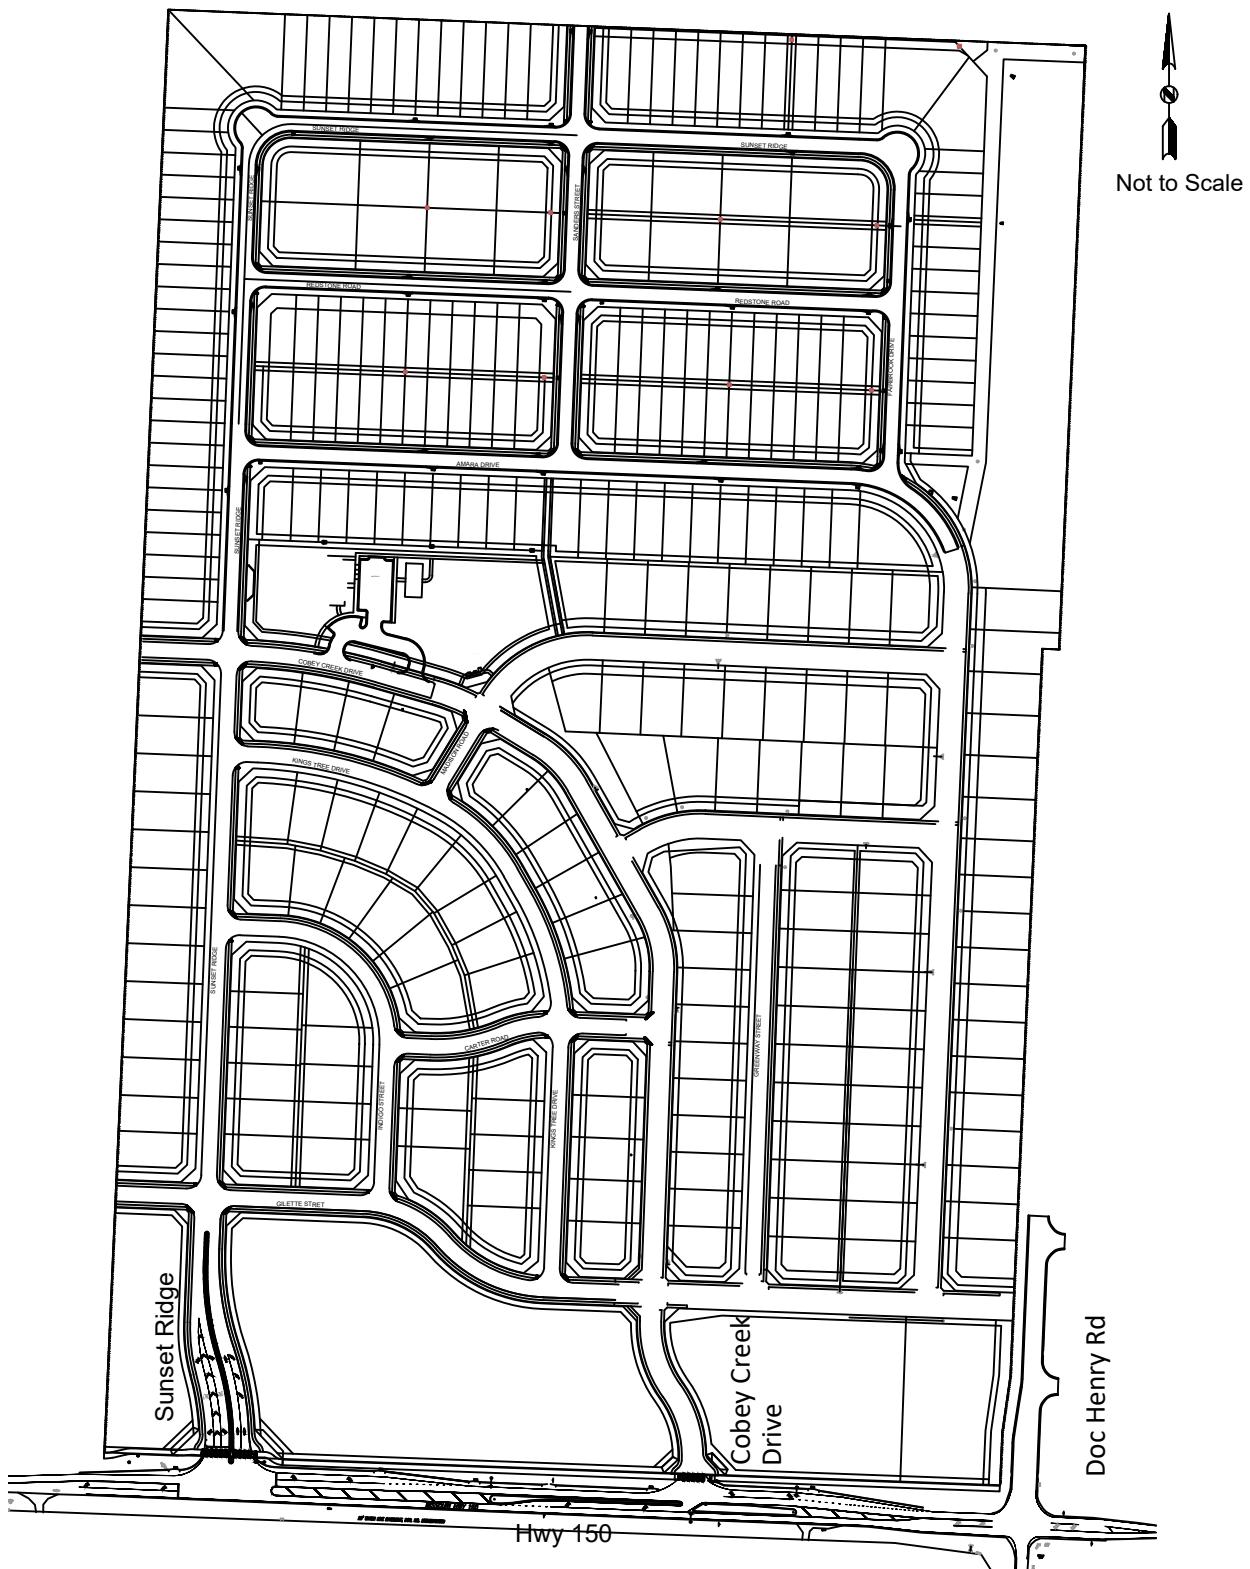

Figure 2 - Site Plan

EXISTING CONDITIONS

The site is located in Lee's Summit, Missouri, in the northwest quadrant of the intersection of Doc Henry Road and Highway 150. The current land use surrounding the planned development is residential to the east and undeveloped/rural to the north, south, and west.

Street Network and Traffic Control

The development is bordered on the east by Doc Henry Road and to the south by Highway 150. US 291 is $\frac{1}{2}$ mile to the west of the proposed development. Access to the development will be from the existing Cobey Creek Drive and the proposed Sunset Ridge.

Highway 150 is a two-lane east-west highway with a posted speed limit of 45 miles per hour (mph) and open ditches for drainage.

Doc Henry Road is a two-lane north-south collector road with no centerline south of Highway 150. North of Highway 150, Doc Henry Road is a 500 feet roadway stub that is barricaded at the intersection of Highway 150. The posted speed limit south of Highway 150 is 35 mph. The intersection of Doc Henry Road and Highway 150 is stop-controlled, with Doc Henry Road stopping.

Cobey Creek Drive was constructed under the development's previous ownership. It is a two-lane north-south road that tees at Highway 150 with a posted speed limit of 25 mph. A 200-foot left turn lane into the development has been constructed on Highway 150 as part of the original design. The intersection is stop controlled with Cobey Creek Drive stopping.

Traffic Volumes

Intersections included in the analysis for this study are:

- Doc Henry Road and Highway 150

Previous turning movement traffic counts were completed on Wednesday, February 9th, 2022, for the peak volume time periods. Morning traffic counts were conducted from 7:00 A.M. until 9:00 A.M. and afternoon traffic counts were from 3:00 P.M. until 6:00 P.M. The morning peak period was determined to be from 7:15 A.M. until 8:15 A.M. and the afternoon peak period was determined to be from 4:30 P.M. until 5:30 P.M.

Updated turning movement traffic counts were completed on Wednesday, January 31st, 2024, for the peak volume time periods and the morning peak period was determined to be from 7:15 A.M. until 8:15 A.M. (a 15-minute shift from the 2022 counts) and the afternoon peak period was determined to be from 4:30 P.M. until 5:30 P.M. (the same time period as the 2022 counts).

On average, the 2022 counts were found to be between 1-2% lower overall than the April 2024 counts with individual movements fluctuating between 0-40% different. The higher 2024 traffic counts were used for the existing conditions traffic counts.

The 2024 traffic volumes are shown on Figure 3. The 2022 and 2024 traffic counts comparison is included in the Appendix.

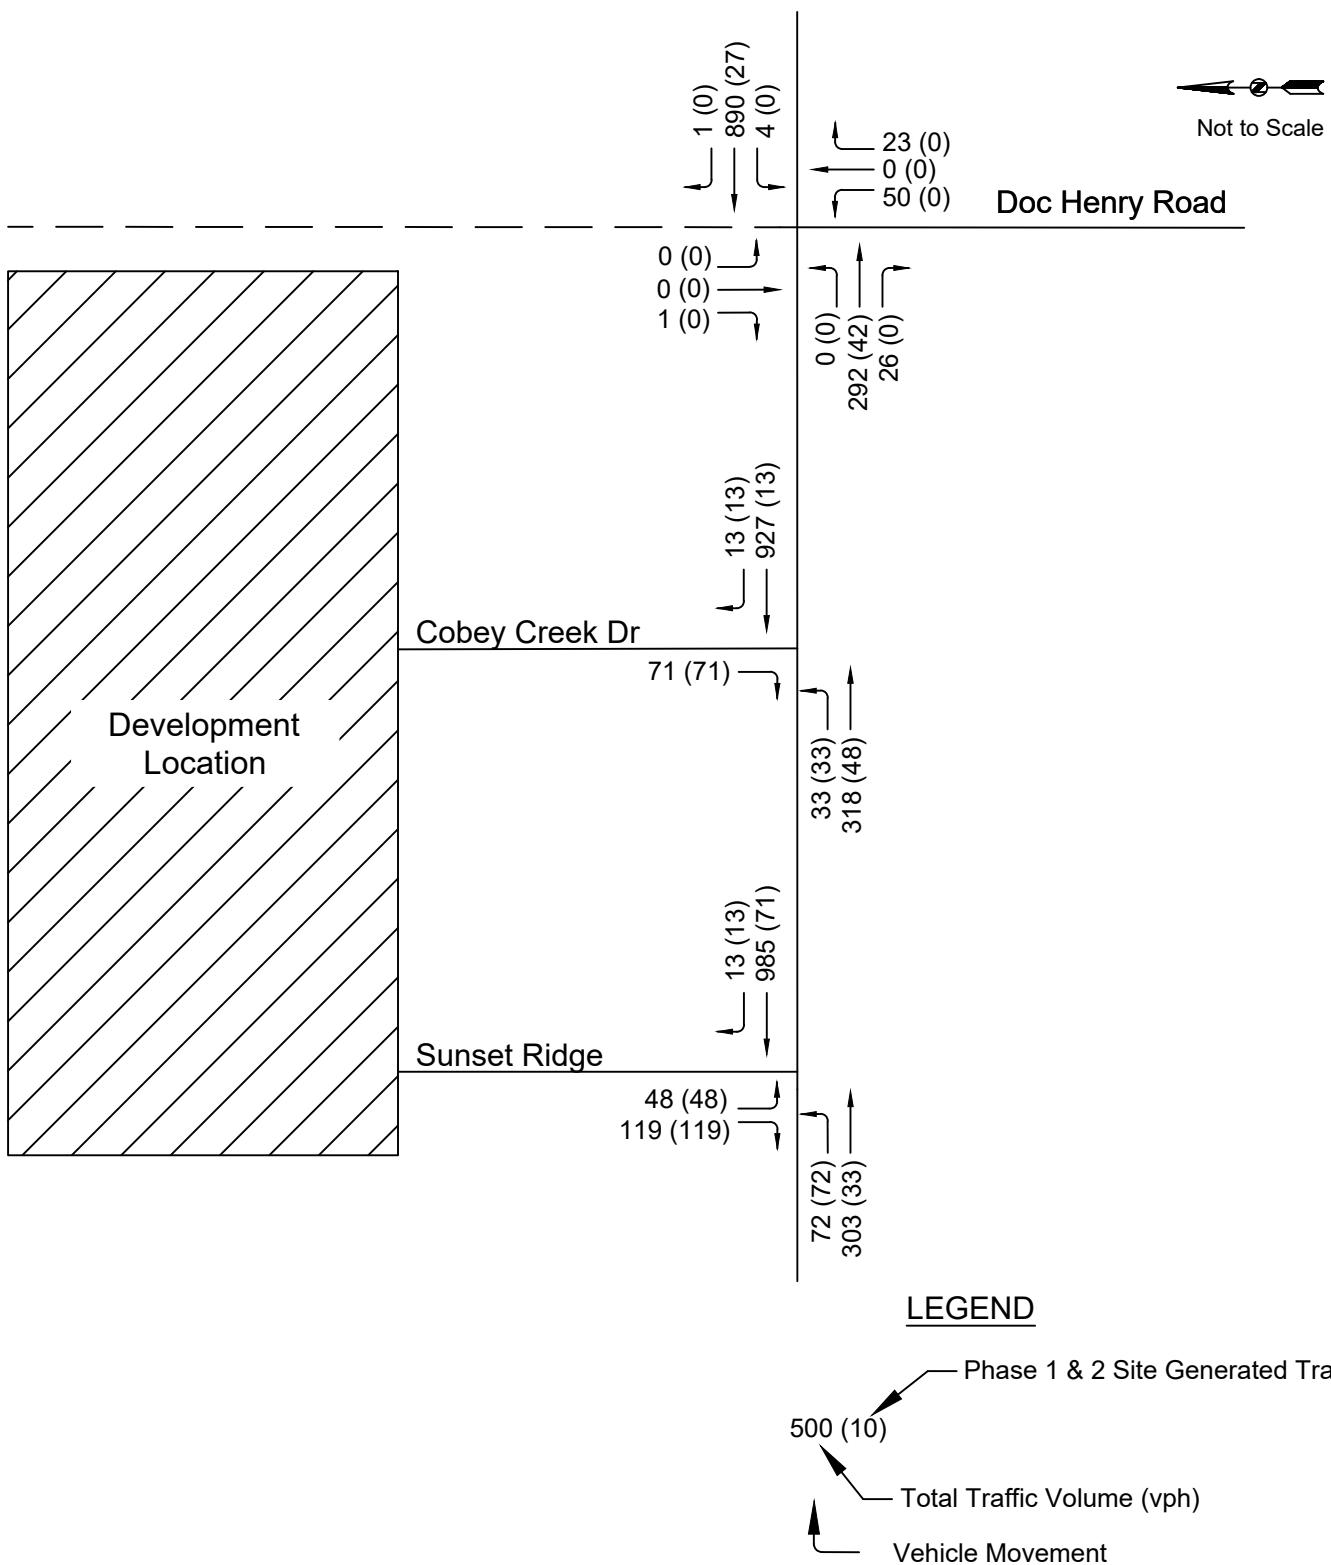

Figure 4 - Existing plus Site AM Volumes

PROPOSED CONDITIONS

The Cobey Creek development is planned to consist of residential units (209 single-family homes, 130 duplexes, and 48 quadplexes), one restaurant, a bank, and a retail site (assumed automobile parts store). The site is being developed in multiple phases, with the single-family homes being constructed first and the commercial being constructed at a future date. Analysis was originally completed with the site being separated into phases, but traffic improvements were triggered with the first phase so further analysis was completed with the development as a whole.

Access Plan

The site will be accessed via the existing Cobey Creek Drive and the proposed Sunset Ridge. Stub roads will be constructed to the north and west to provide future connections to surrounding developments. Sunset Ridge is being designed for the addition of a south leg to the intersection when the planned Ovations development south of Highway 150 is constructed.

Cobey Creek Drive will be converted to a $\frac{1}{4}$ access and Sunset Ridge will be a signalized full access drive (when warrants are met).

There are no planned connections to the east or to Doc Henry Road.

Sight Distance

Sight distance was measured at the proposed Sunset Ridge access into the site using the methodology recommending by the American Association of State Highway and Transportation Engineers (AASHTO). The posted speed limit along Highway 150 at the proposed access point is 45 mph and for that speed AASHTO requires a minimum intersection sight distance of 500 feet. Based on field measurements the available sight distance will be in excess of 500 feet and is adequate.

AASHTO requires a stopping sight distance of 360 feet for a roadway with a speed limit of 45 mph. The measured stopping sight distance is in excess of 500 feet and is adequate.

No sight distance was measured at Cobey Creek Drive as it is an existing roadway.

Crash Analysis

Crashes at the study intersections were analyzed over a five-year period (2019-2023) from Missouri Highway Patrol data to identify existing crash patterns. There were a total of four crashes reported during the crash study time period, and no fatal crashes within the study area.

Based on the analysis of the four crashes, there were two angle crashes, one sideswipe crash, and one pedestrian hit. The angle and sideswipe crashes were primarily due to inattentive drivers or failure to yield (stop sign). The

pedestrian crash resulted in non-life-threatening injuries and was caused by pedestrians walking in front of a vehicle on MO-150 without leaving sufficient time to cross.

No correctable crash patterns emerged as a result of the study and no recommendations are made to alter the study intersections based on crash data.

Detailed crash summaries are included in the Appendix.

Trip Generation

The expected trip generation for the development was estimated using the 11th Edition of the Trip Generation Handbook published by the Institute of Transportation Engineers. The trip generation was based on Peak Hour of Adjacent Street Traffic, One Hour Between 7 and 9 AM along with Peak Hour of Adjacent Street Traffic, One Hour Between 4 and 6 PM criteria.

Estimates for the expected trips generated by the development are provided in Table 2.

Table 1 – Trip Generation						
	Weekday		A.M.		P.M.	
ITE Land Use Code Units	Trips In (vpd)	Trips Out (vpd)	Trips In (vph)	Trips Out (vph)	Trips In (vph)	Trips Out (vph)
210—Single-Family Detached Housing 209 dwelling units	994	994	37	109	125	74
215—Single-Family Attached Housing 130 dwelling units	470	470	16	46	44	30
220—Multi-Family Housing (Low-Rise) 48 dwelling units	192	191	10	28	26	15
Phase I Total	1,656	1,656	63	183	195	119
843—Automobile Parts Sales 6,000 Sq Ft	150	149	8	7	14	15
912—Drive-In Bank 5,000 Sq Ft	251	251	29	21	53	53
932—High-Turnover (Sit-Down) Restaurant 6,000 Sq Ft	322	322	31	26	33	21
Phase II Total	723	722	68	54	100	89
Total	2,379	2,379	131	237	295	208

Trip Distribution

The trip distribution pattern was determined for the site based on the directional traffic pattern of the updated peak period traffic counts and based on a general analysis of the surrounding area. The detailed distribution patterns can be found in the appendix. Based on the existing traffic patterns, the type of development, and the metropolitan population centers, the new trips were assigned onto the roadway network as shown below for the morning and afternoon periods.

Trip distribution during the morning peak period:

- 20% to/from the east
- 80% to/from the west

Trip distribution during the afternoon peak period:

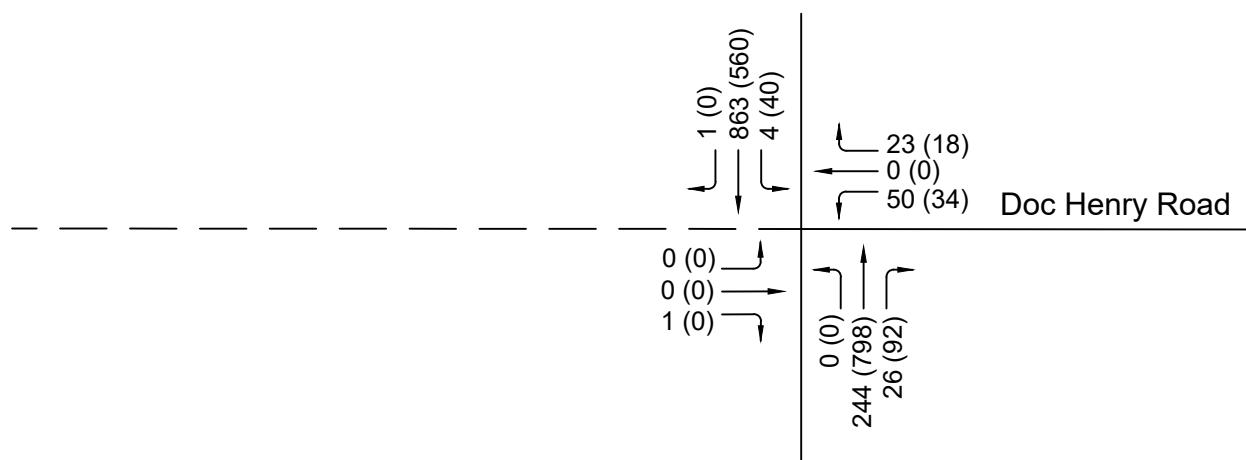

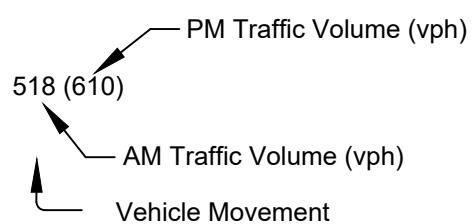

- 20% to/from the east
- 80% to/from the west

Existing Plus Site Traffic Volumes

The expected development site-generated traffic volumes were added to the existing traffic scenario. The volumes are shown on Figures 4 and 5.

Existing Plus Site and Ovations Site Traffic Volumes

A traffic study for the planned Ovations development, to be located south of Highway 150 at Sunset Ridge, is currently underway but has not yet been approved. The Ovations site will consist of 428 single-family attached dwellings and 300 multifamily (low-rise) dwellings. The expected site-generated traffic volumes for the Ovations development were added to the existing traffic volumes and the proposed site volumes at the study intersections and are shown on Figures 6 and 7.

Not to ScaleLEGEND

The legend defines the symbols used in the traffic volume diagram:

- PM Traffic Volume (vph) - indicated by an arrow pointing up
- AM Traffic Volume (vph) - indicated by an arrow pointing down
- Vehicle Movement - indicated by a horizontal dashed line

Figure 3 - Existing Traffic Volumes

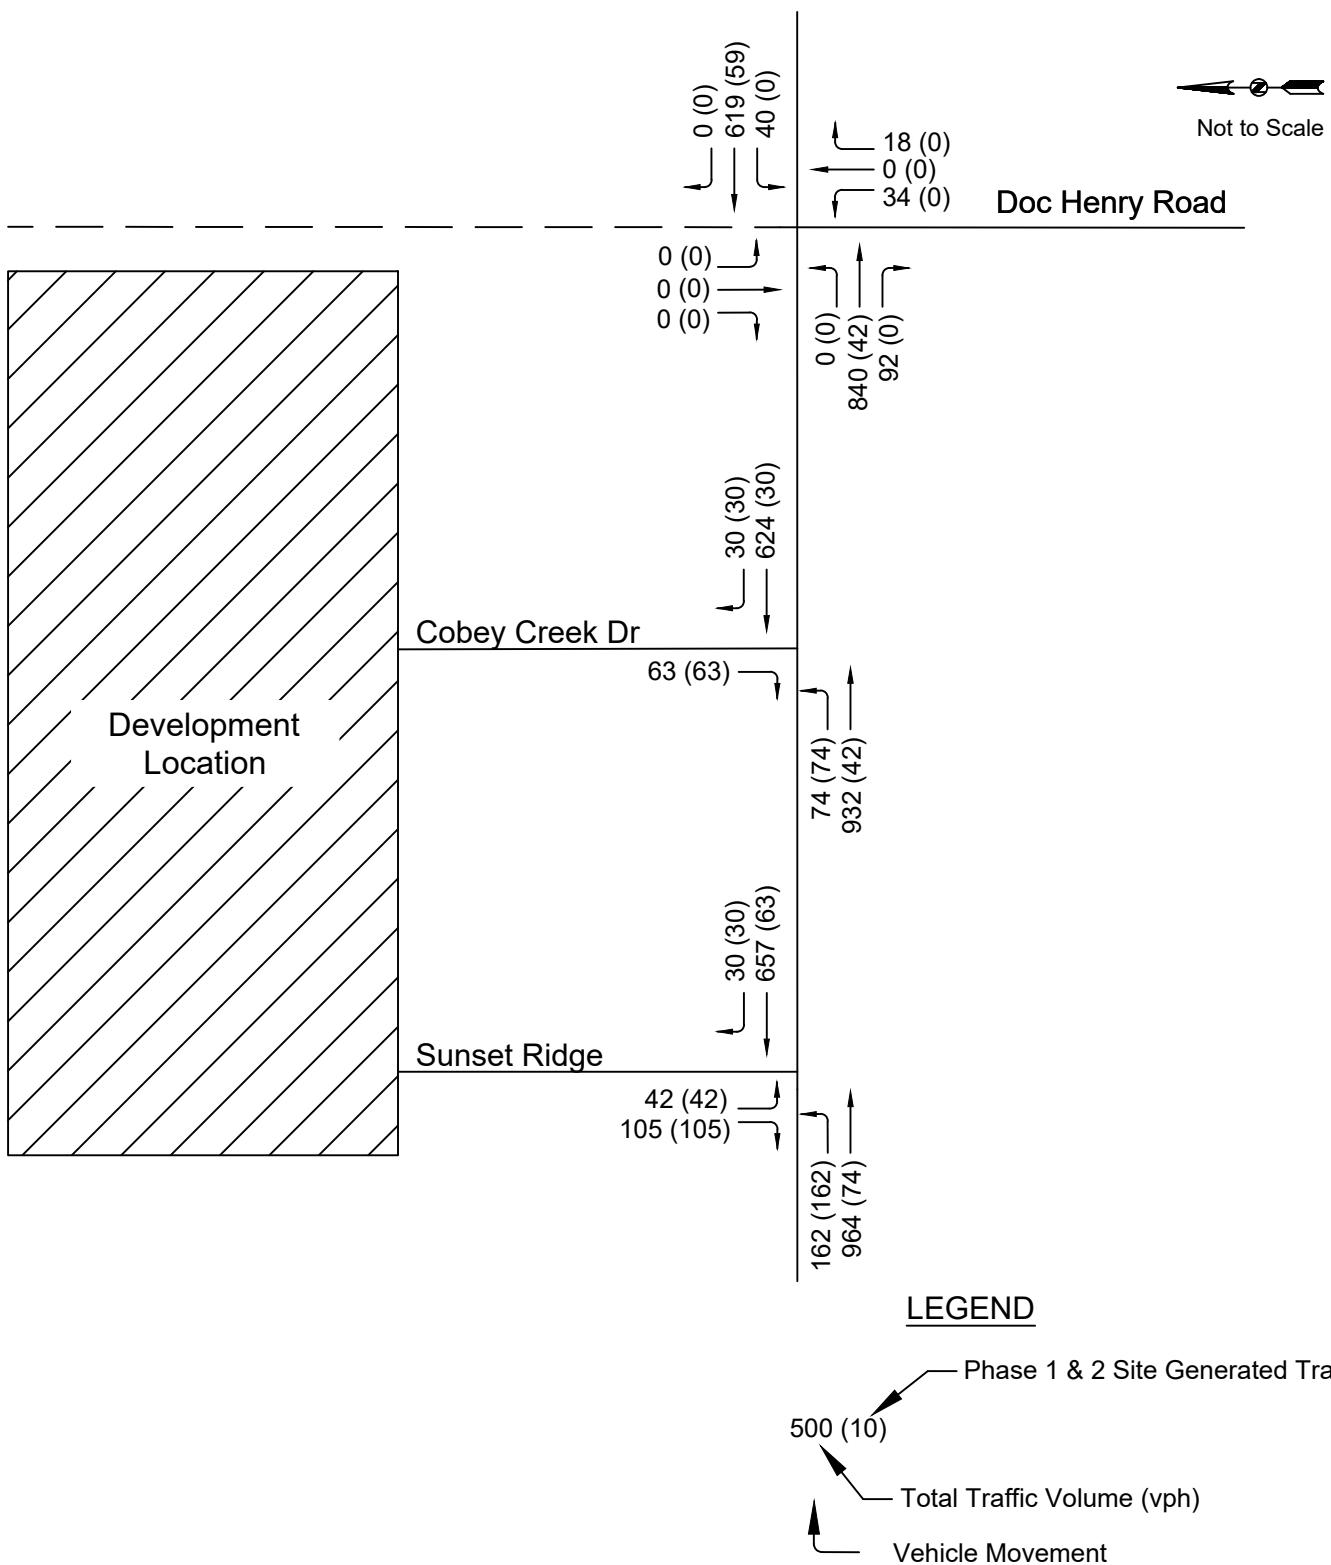

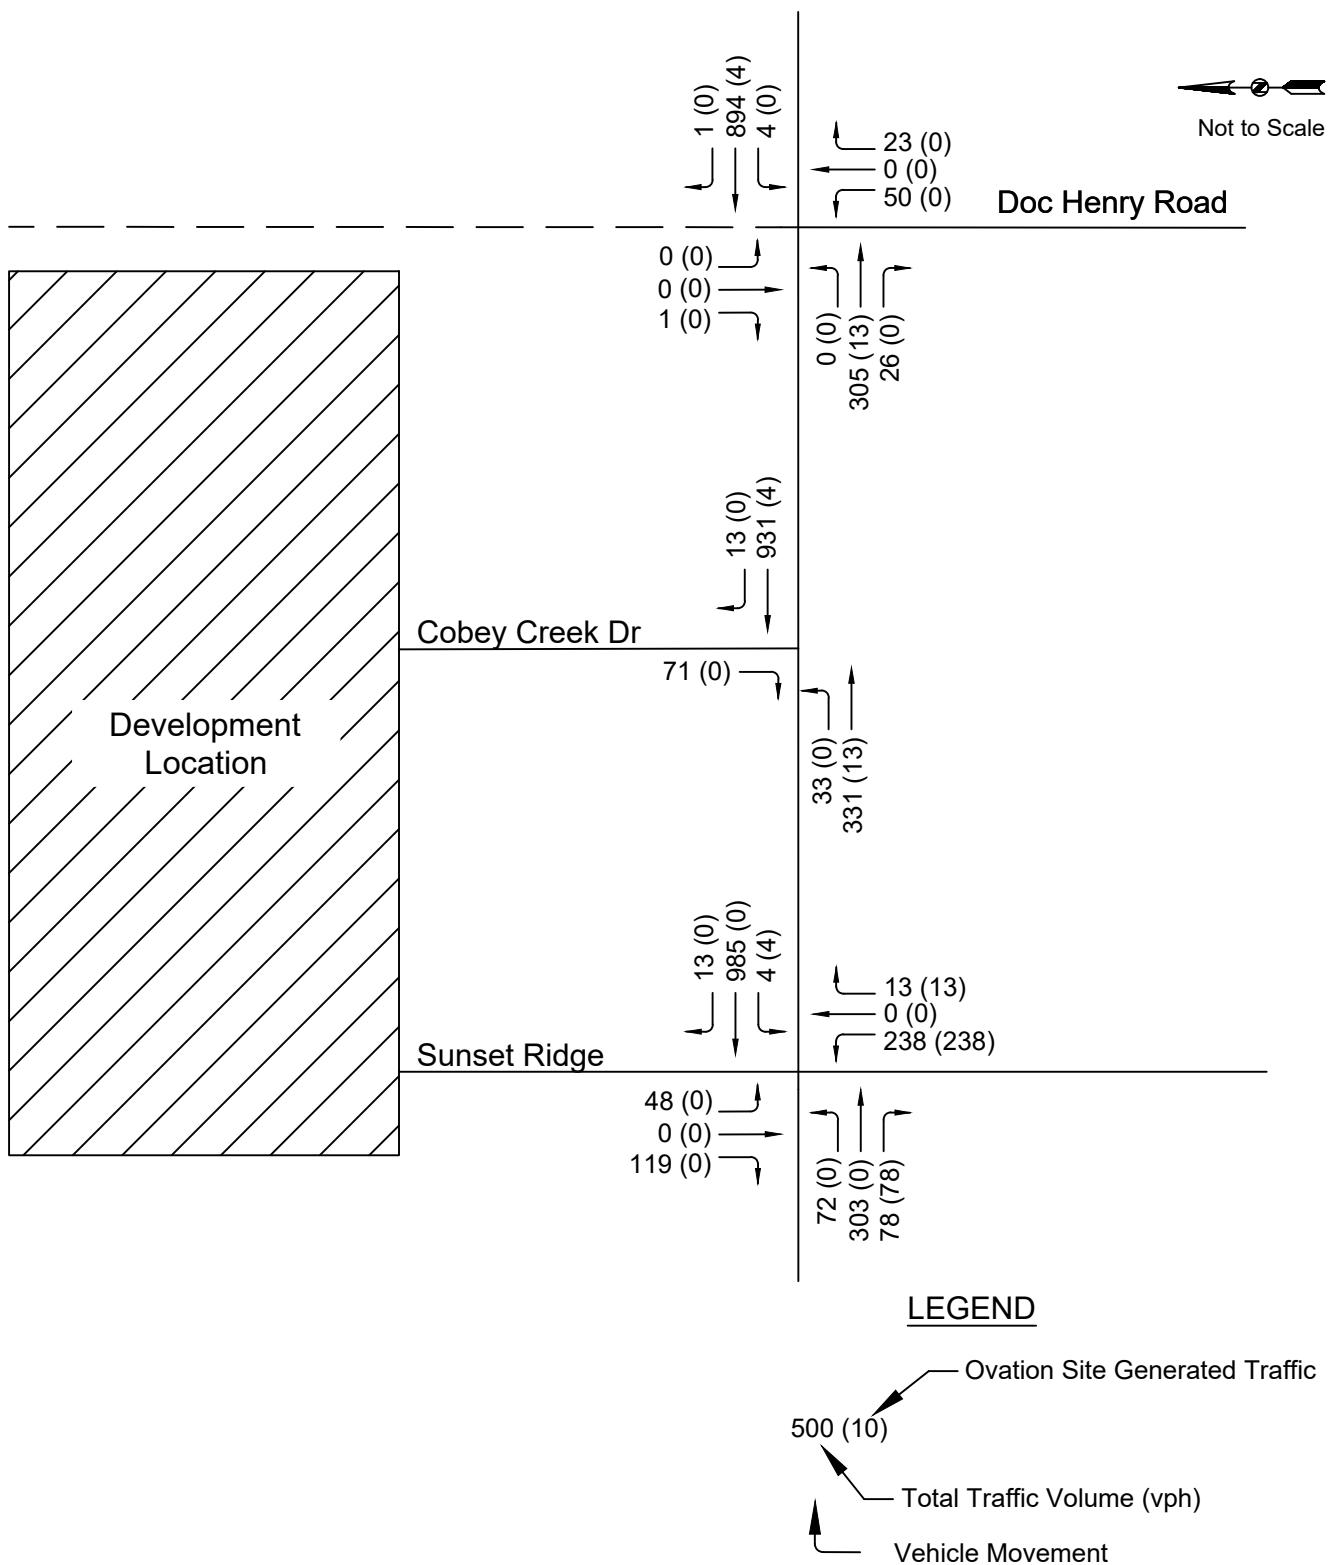

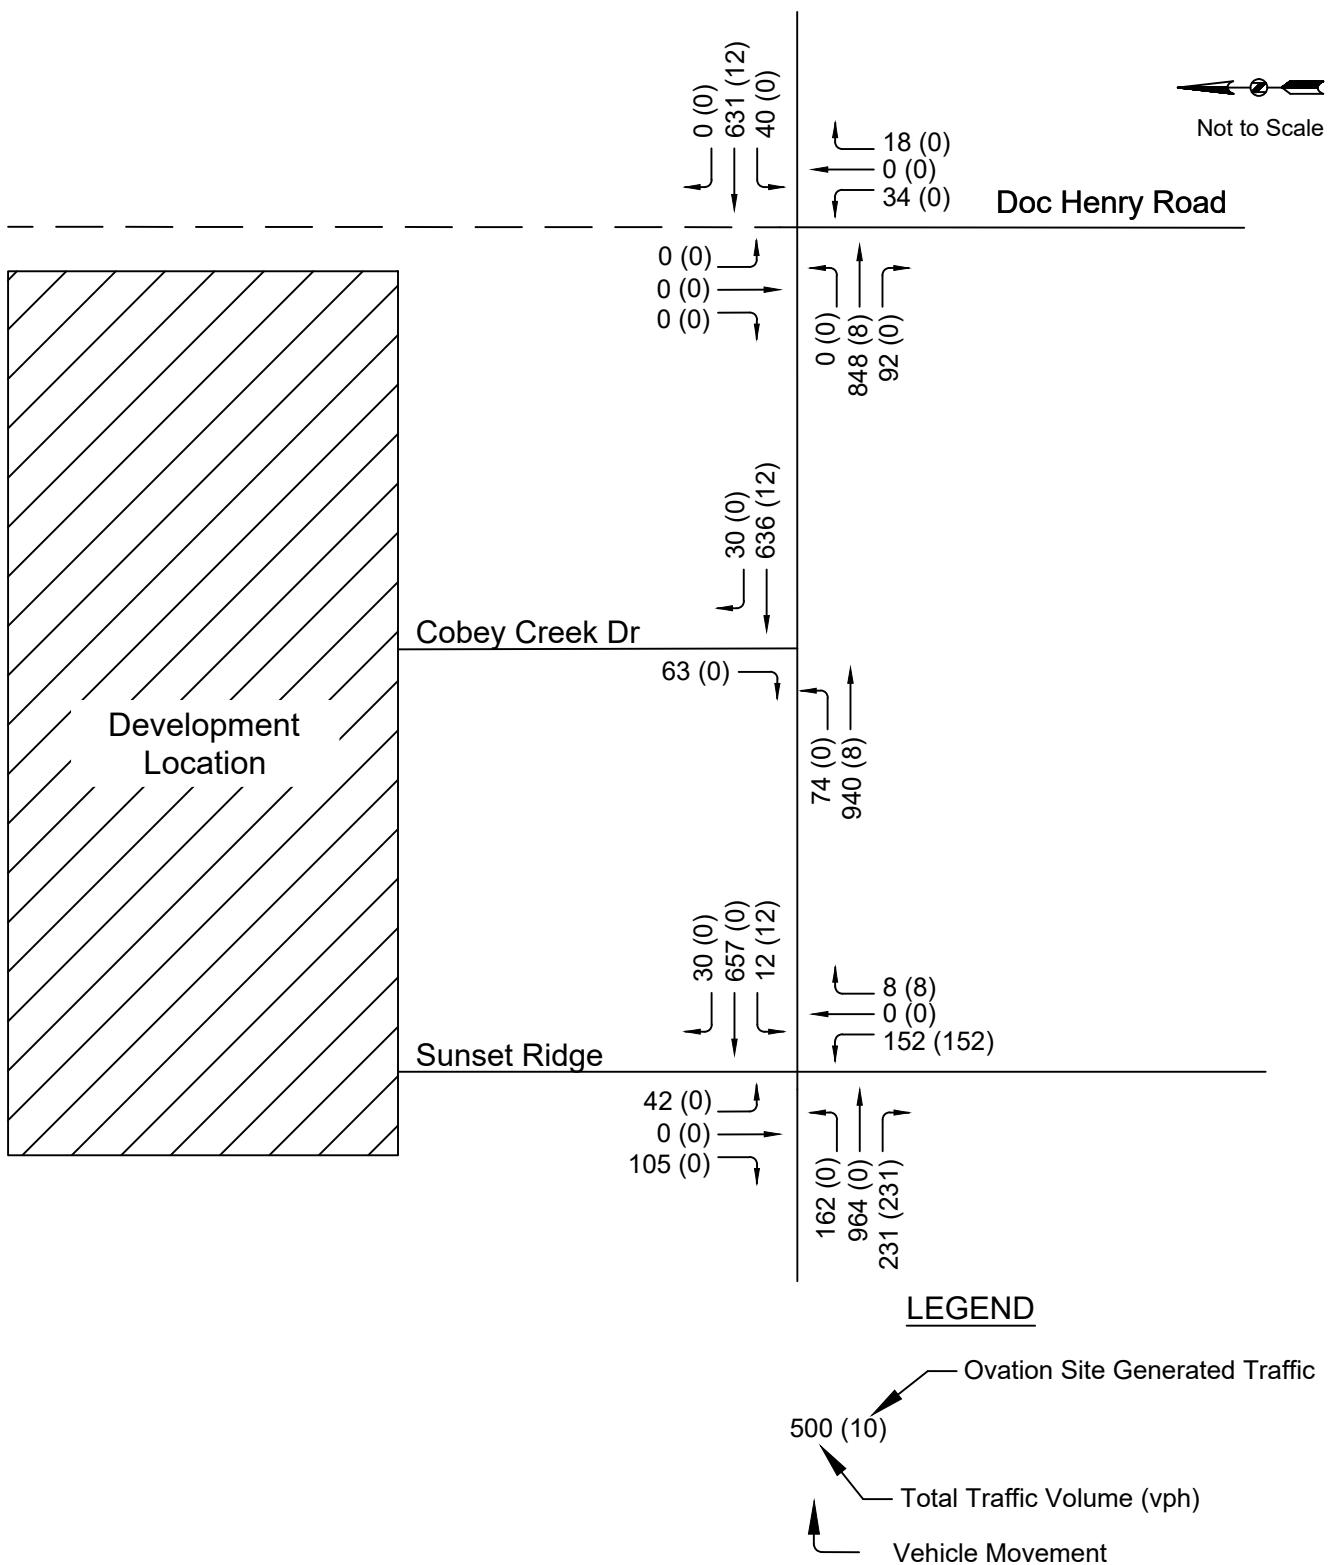

Figure 5 - Existing plus Site PM Volumes

**Figure 6 - Existing plus Site and Ovations Site AM Volumes**

**Figure 7 - Existing plus Site and Ovations Site PM Volumes**

Signal Warrant Study

It may be considered justified to install a traffic signal at a location if one or more of the traffic signal warrants listed in the 2023 MUTCD is met. The traffic signal warrants are:

- Warrant 1: Eight-Hour Vehicular Volume
- Warrant 2: Four-Hour Vehicular Volume
- Warrant 3: Peak Hour
- Warrant 4: Pedestrian Volume
- Warrant 5: School Crossing
- Warrant 6: Coordinated Signal System
- Warrant 7: Crash Experience
- Warrant 8: Roadway Network
- Warrant 9: Intersection Near at Grade Crossing

Warrant 3 was evaluated at Doc Henry Road and Highway 150 along with Sunset Ridge and Highway 150 as part of this study for the existing and existing plus site conditions.

Warrant 3: Peak Hour

The peak hour warrant is satisfied if either of the two following conditions are met:

A: This condition is satisfied if any of the following conditions are met for a period of one hour during an average day:

1. The total stopped time delay experience by the traffic on one minor-street approach (one direction only) controlled by a stop sign equals or exceeds: 4 vehicles-hours for a one-lane approach or five vehicle hours for a two-lane approach and
2. The volume on the same minor-street approach (one direction only) equals or exceeds 100 vehicles per hour for one moving lane of traffic or 150 vehicles per hour for two moving lanes and
3. The total entering volume serviced during the hour equals or exceeds 650 vehicles per hour for intersections with three approaches or 800 vehicles per hour for intersections with four or more approaches.

(Condition A is not being examined in this study)

B: The peak hour warrant is satisfied if the vehicles per hour on both approaches of the major street and the vehicles on the higher volume approach of the minor street for one hour fall above the 2009 MUTCD Warrant 3 curve.

Warrant Analysis

The traffic volumes at Doc Henry Road currently meet the 70% Factor for Warrant 3. It is expected that the Sunset Ridge and Highway 150 intersection will warrant a signal in the existing plus site conditions. The raw data and curves from the 2023 MUTCD are included in the Appendix.

Right-Turn and Left-Turn Lane Warrants

The need for right and left-turn lanes into the site entrances was evaluated using MoDOT's turning lane guidelines as part of this study for the existing plus condition.

Right-Turn Warrant

The traffic volumes are expected to meet the right-turning volume criteria at both the Cobey Creek Drive and Sunset Ridge intersections.

Left-Turn Warrant

The existing plus site traffic volumes are expected to warrant a left-turn lane during peak periods for the Sunset Ridge and Highway 150 intersection. There is an existing left-turn lane at Cobey Creek Drive.

The raw analysis data is included in the Appendix.

CAPACITY

The capacity analysis for the study intersections was completed using the methodology outlined in the [Highway Capacity Manual](#), 6th Edition. The volume and capacity analysis was completed using Trafficware SYNCHRO software (latest version). The criteria for determining Level of Service (LOS) for signalized and unsignalized study intersections and access points are based on the average vehicle delay and is outlined in Table 3 below. Level of Service is defined as the measure of the quality of traffic flow and is graded from "A" to "F"—with "A" being the best situation and "F" being the worst.

Table 2 – Intersection Level of Service

Level of Service (LOS)	Average Control Delay (sec/veh)	
	Unsignalized	Signalized
A	< 10	< 10
B	< 15	< 20
C	< 25	< 35
D	< 35	< 55
E	< 50	< 80
F	≥ 50	≥ 80

Existing Conditions

Doc Henry Road and Highway 150

The through movements of Highway 150 are not stop-controlled and are therefore operating in a free-flow condition. The eastbound right-turn and westbound left-turn movement onto Doc Henry Road operates at a LOS B or better and there is sufficient capacity for queuing vehicles. The northbound movements on Doc Henry Road operates at a LOS E during the morning and LOS F for the afternoon conditions, which is below the accepted LOS threshold.

The results of the capacity analysis for the existing morning and afternoon peak hour conditions along with lane configuration and queue lengths are shown on Figure 8.

Existing Plus Site Conditions

Doc Henry Road and Highway 150

As a signalized intersection: All approaches operate at a LOS C or better. Due to the morning and afternoon directional traffic, the east and westbound through movements experience longer queue lengths (495 feet westbound in the morning and 790 feet eastbound in the afternoon), however the intersection has sufficient capacity for queuing vehicles without backing into 20th Avenue to the east or Sunset Ridge to the west. Vehicles will still be able to utilize the left-turn lane at Cobey Creek Drive and as the intersection is a $\frac{3}{4}$ access the right-turns will be unaffected.

Cobey Creek Drive and Highway 150

The analysis was completed with $\frac{3}{4}$ access, the existing 200 feet eastbound left-turn lane, and a new westbound 150 feet right-turn lane. All movements operate a LOS C or better, and there is sufficient capacity for queuing vehicles.

Sunset Ridge and Highway 150

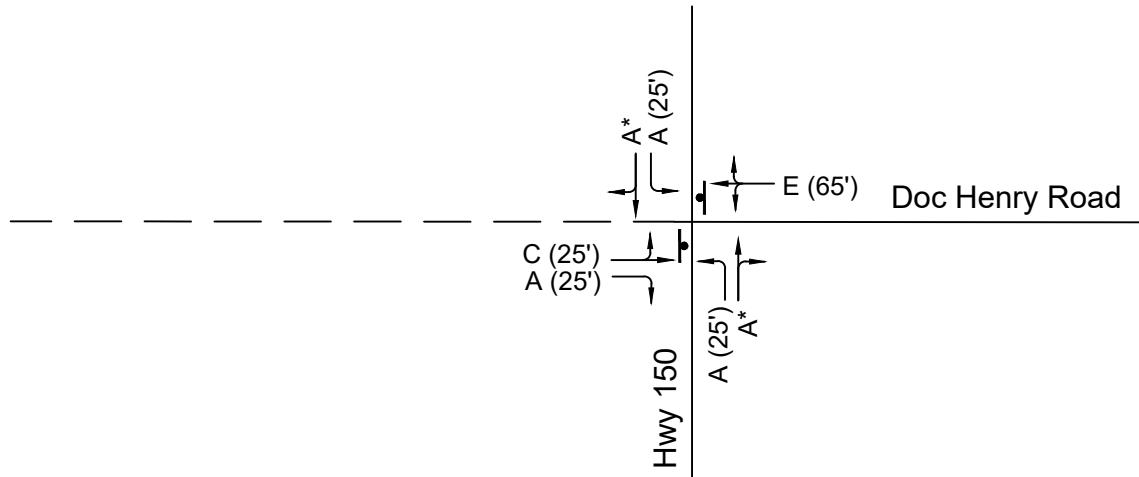

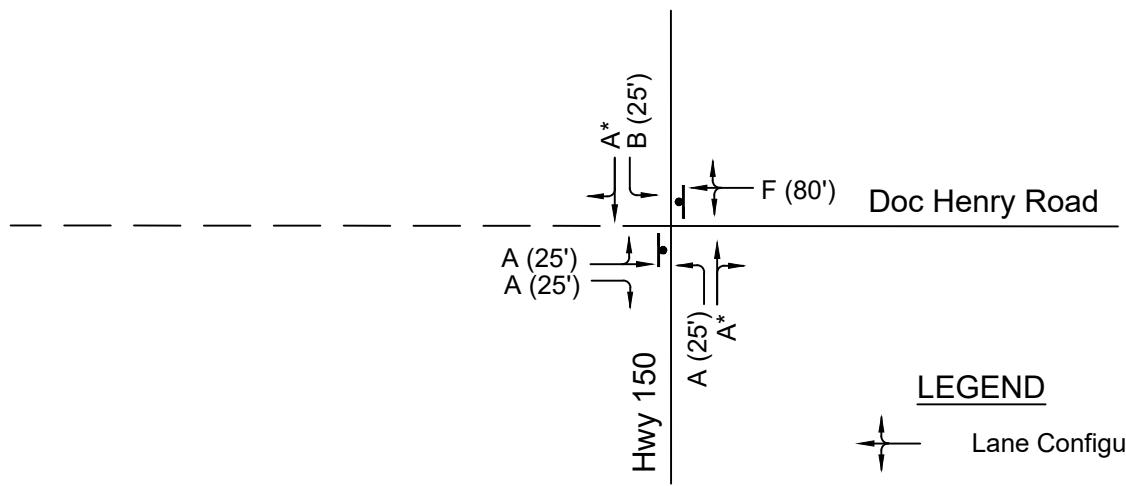

The analysis was completed with a 180 feet eastbound left-turn lane and westbound 190 feet right-turn lane as both are warranted based on MoDOT turn lane criteria.

As a stop-controlled intersection: The southbound left-turn movement operates at a LOS F for both the morning and afternoon peak periods.

As a signalized intersection: All approaches operate at a LOS C or better, and the intersection has sufficient capacity for queuing vehicles.

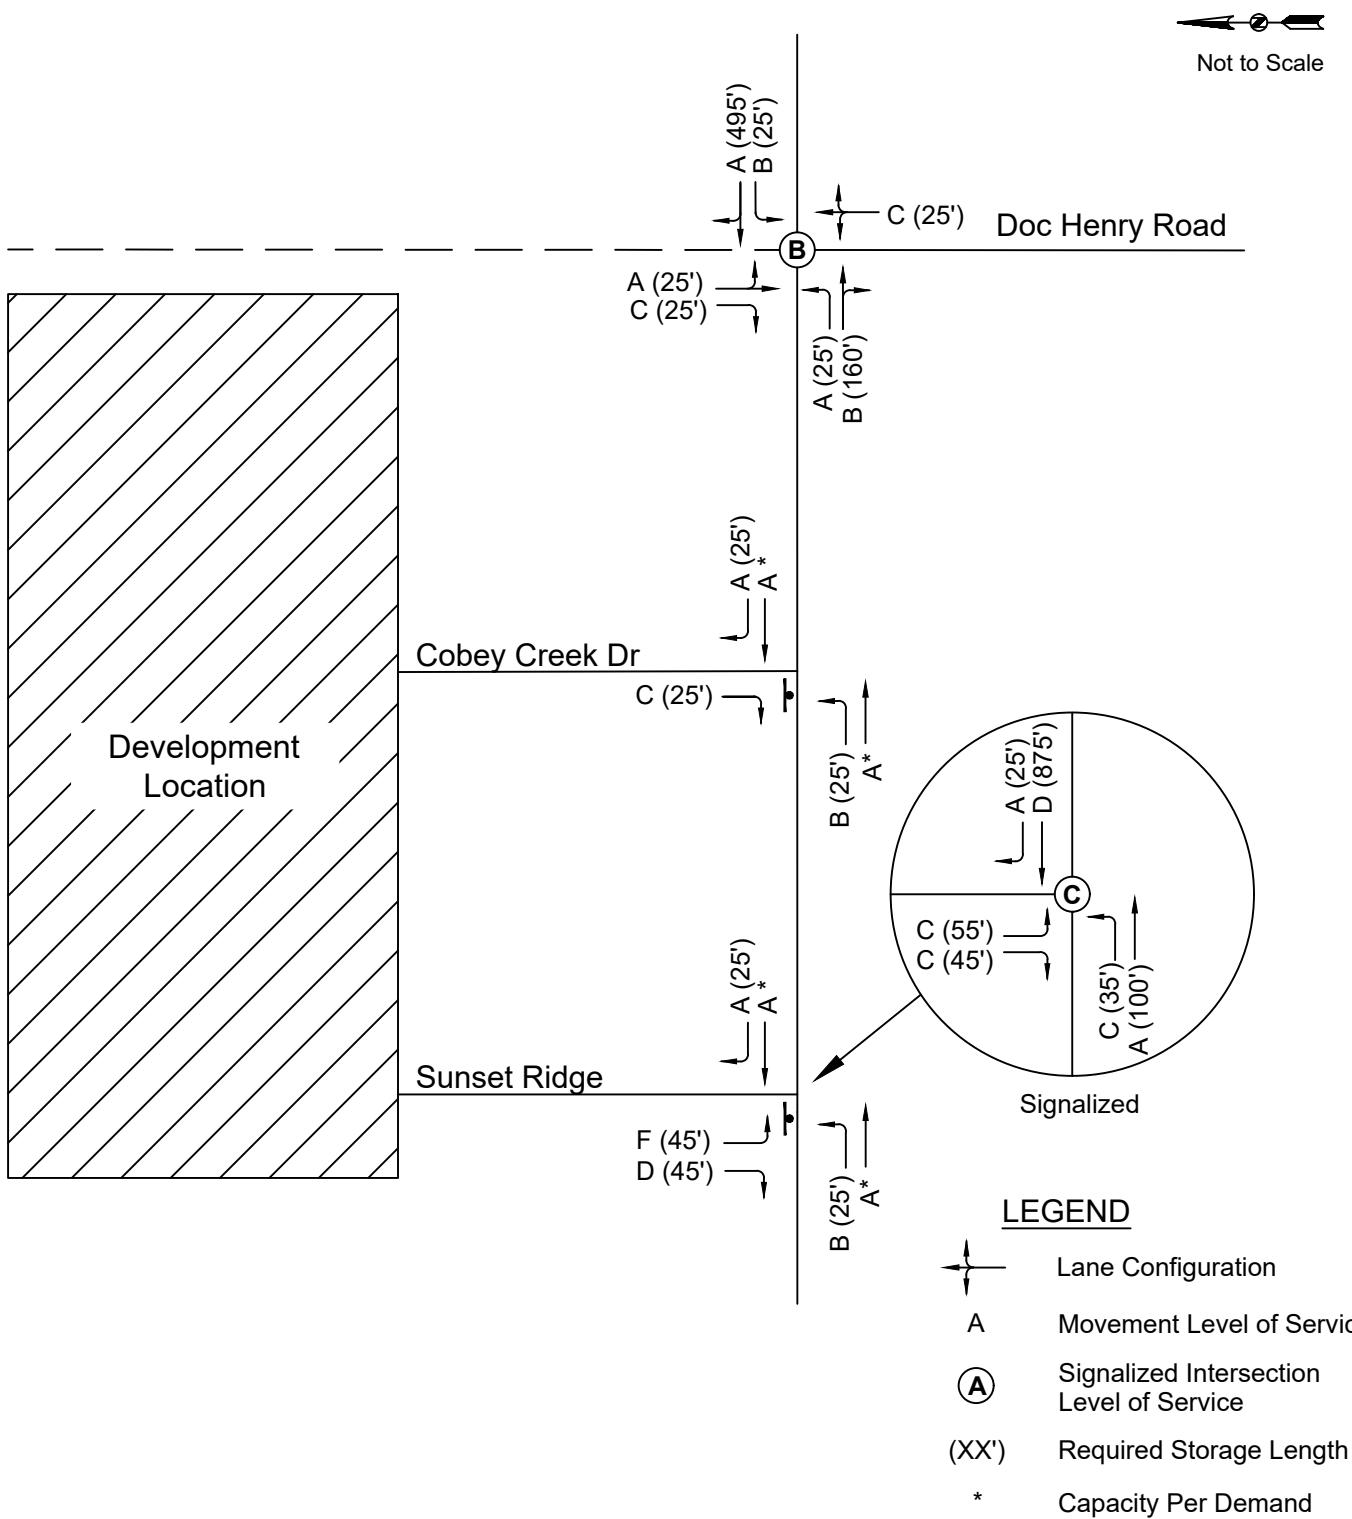

The results of the analysis is shown for the morning and afternoon peak hour conditions along with lane configuration and queue lengths on Figures 9 and 10.

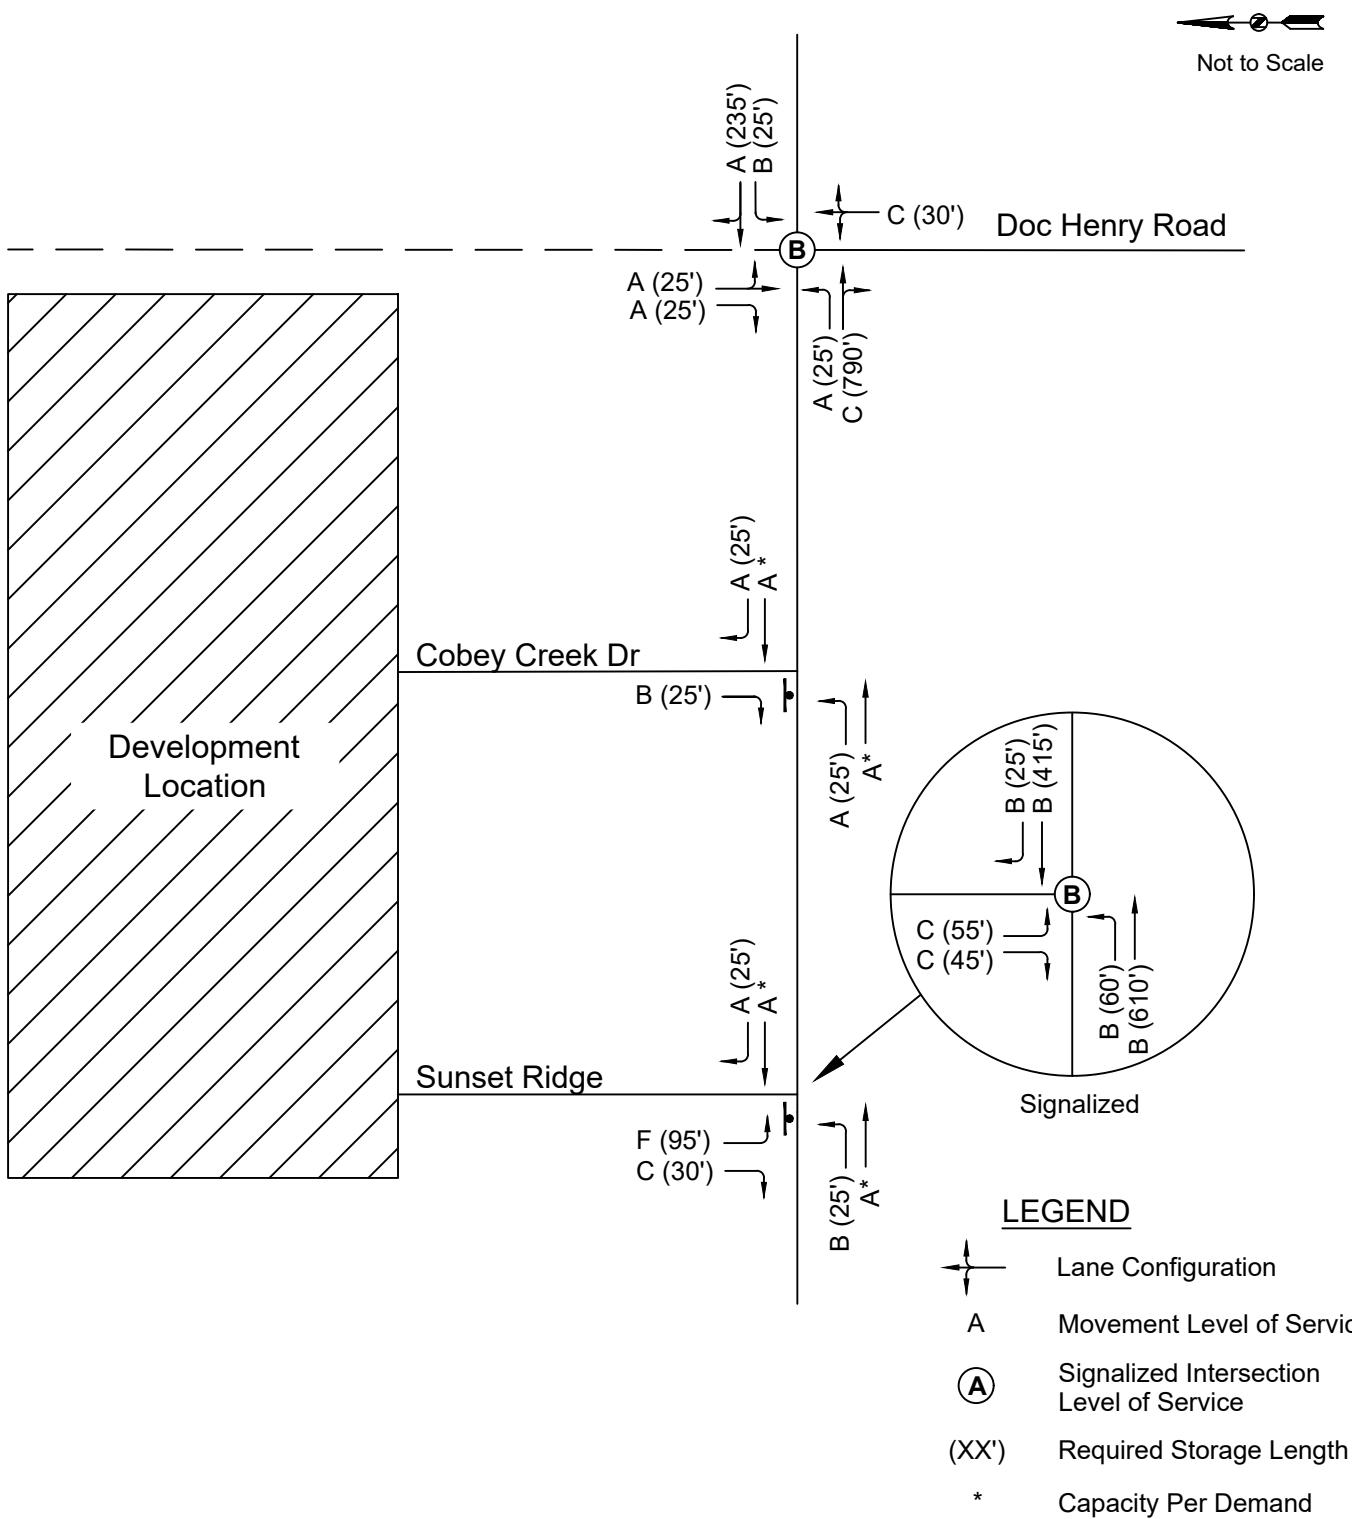

Not to Scale

**Figure 10 - Existing plus Site PM Level of Service**

Existing plus Site and Ovations Site Conditions

Doc Henry Road and Highway 150

There is no significant change in operations for this intersection from the signalized Existing Plus Site Conditions—all movements operate at a LOS C or better and there is sufficient capacity for queueing vehicles.

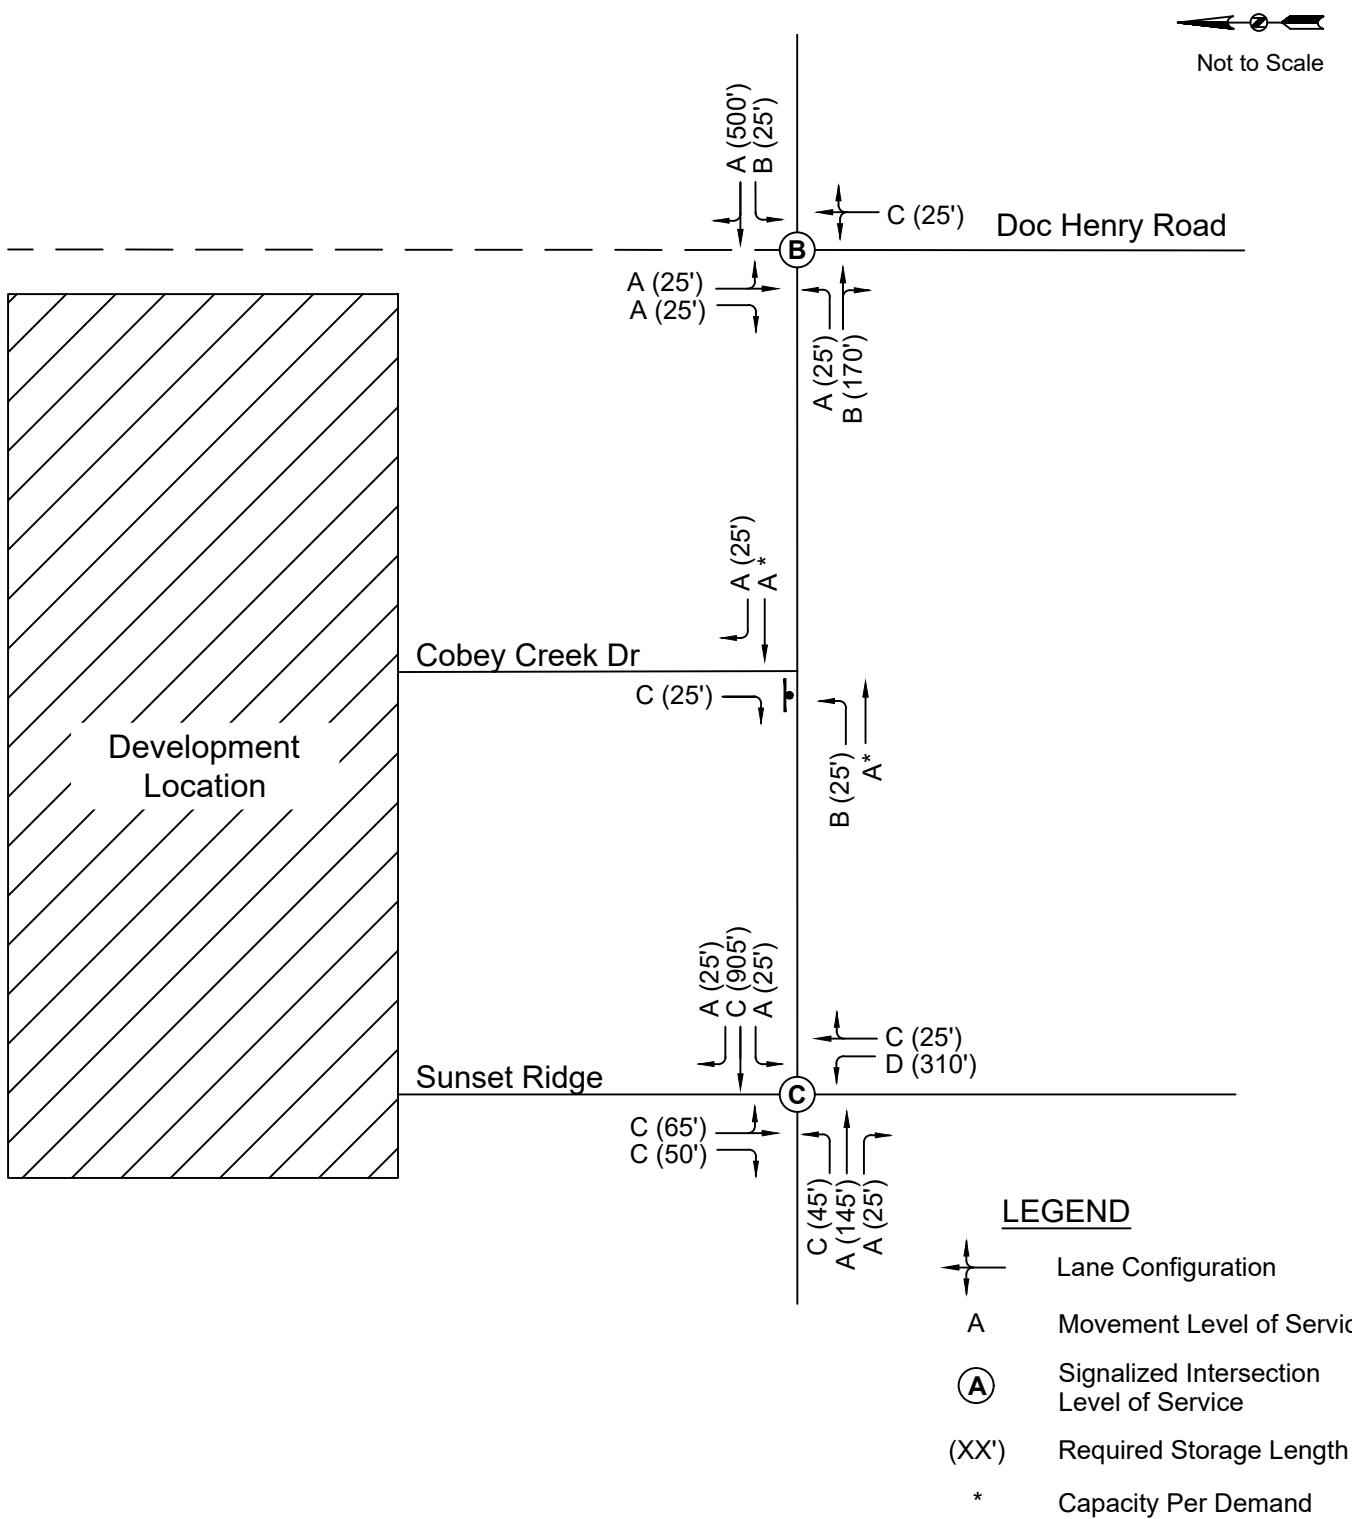

Cobey Creek Drive and Highway 150

There is no significant change in operations for this intersection from the signalized Existing Plus Site Conditions—all movements operate at a LOS C or better and there is sufficient capacity for queueing vehicles.

Sunset Ridge and Highway 150

The analysis was completed with the addition of a northbound left-turn lane, a shared through/right-turn lane, and the signal timings were optimized to account for the additional leg of the intersection. All movements operate at a LOS D or better and there is sufficient capacity for queuing vehicles.

The results of the future analysis is shown for the morning and afternoon peak hour conditions along with lane configuration and queue lengths on Figures 11 and 12.

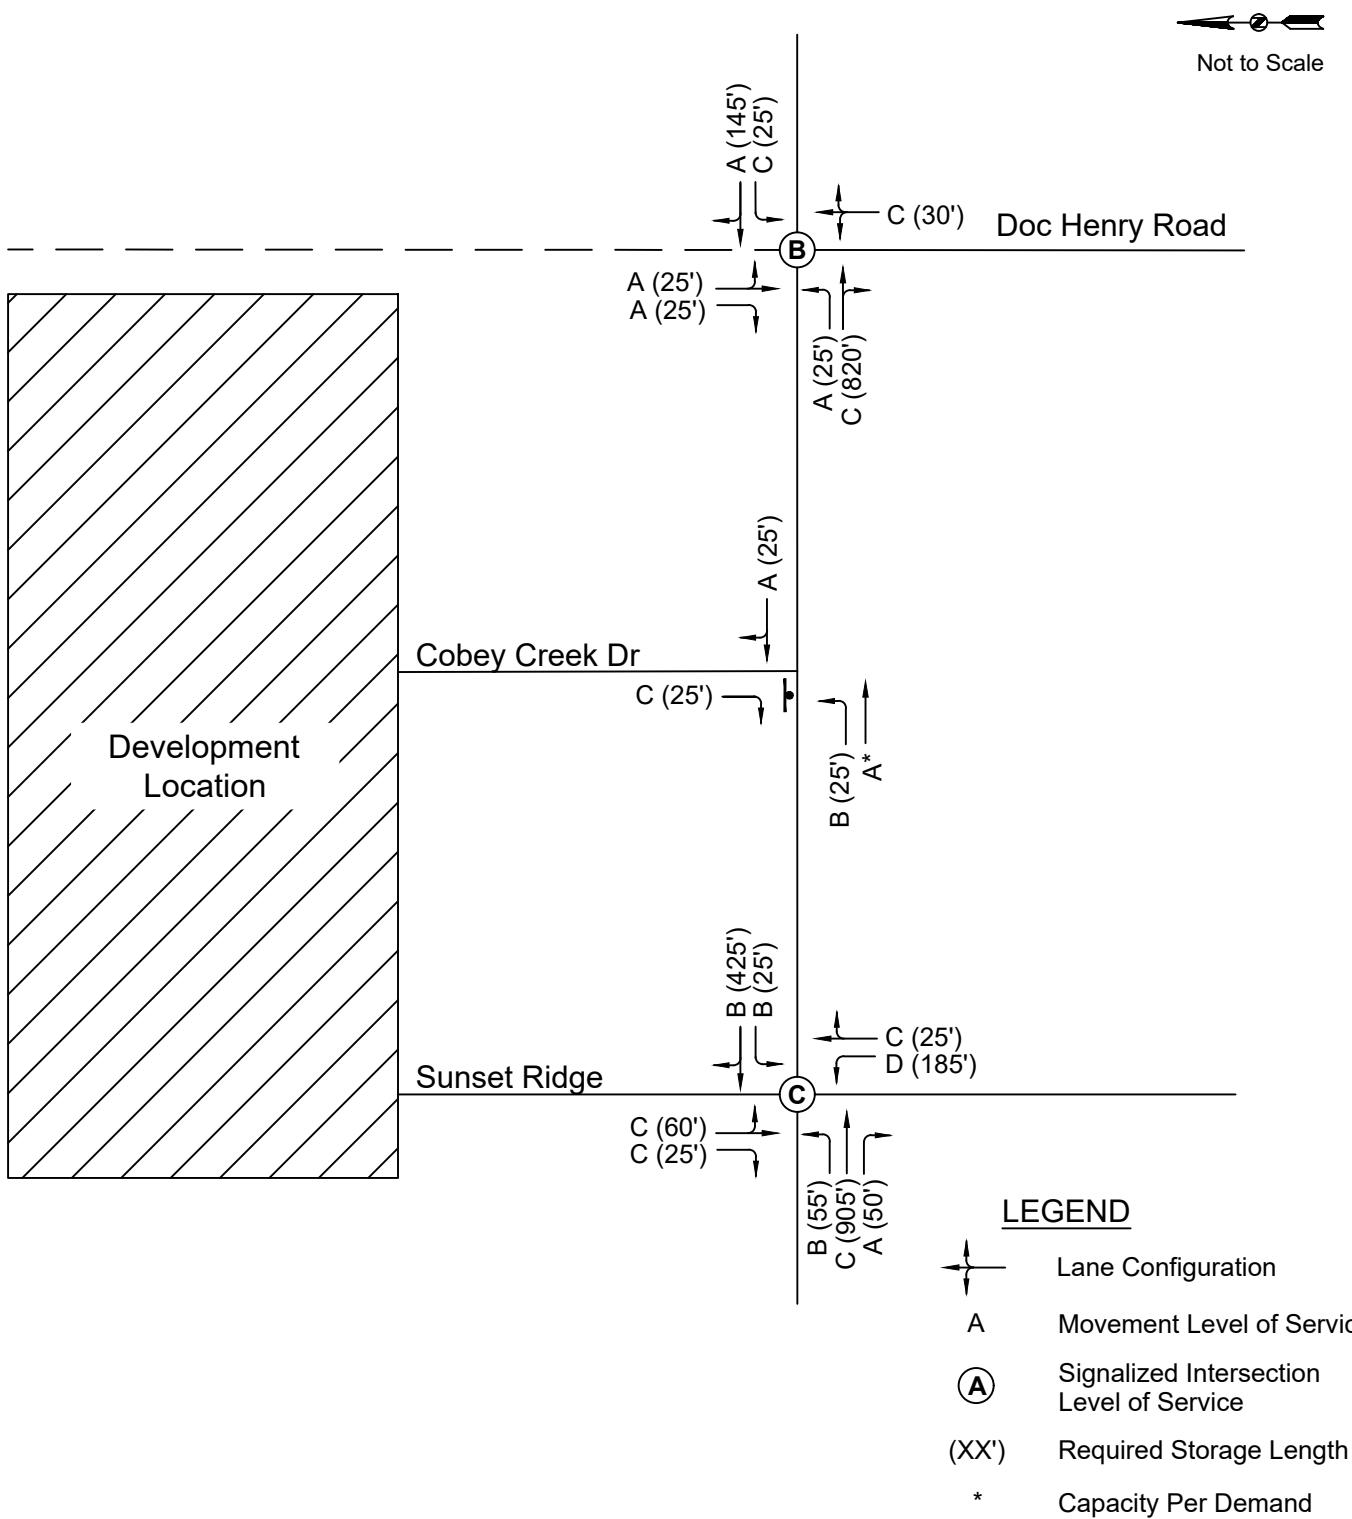

Figure 12 - Existing plus Site and Ovations Site PM Level of Service

RECOMMENDATIONS

This study documents the findings of the traffic analysis of the expected traffic for the Cobey Creek development in Lee's Summit, Missouri. The study includes analysis of the existing conditions and existing plus site conditions.

Based on the results of the SYNCHRO analysis, observations from the field, and engineering judgment the following recommendations are made:

- Discuss construction of a signal at Doc Henry Road and Highway 150 with appropriate stakeholders.
- Construct a westbound right-turn lane (150 feet of storage with a 100-foot taper) and a concrete median to prevent left-turns out at Cobey Creek Drive and Highway 150.
- Construct a westbound right-turn lane (190 feet of storage with a 100-foot taper), an eastbound left-turn lane (180 feet of storage with a 100-foot taper), and signalize the intersection of Sunset Ridge and Highway 150. The traffic signal should be designed to accommodate the future south leg of the intersection as part of the Ovations development roadway improvements.

EXISTING PLUS SITE (PHASE I)

Sunset Road and Highway 150 - AM & PM - Meets warrants

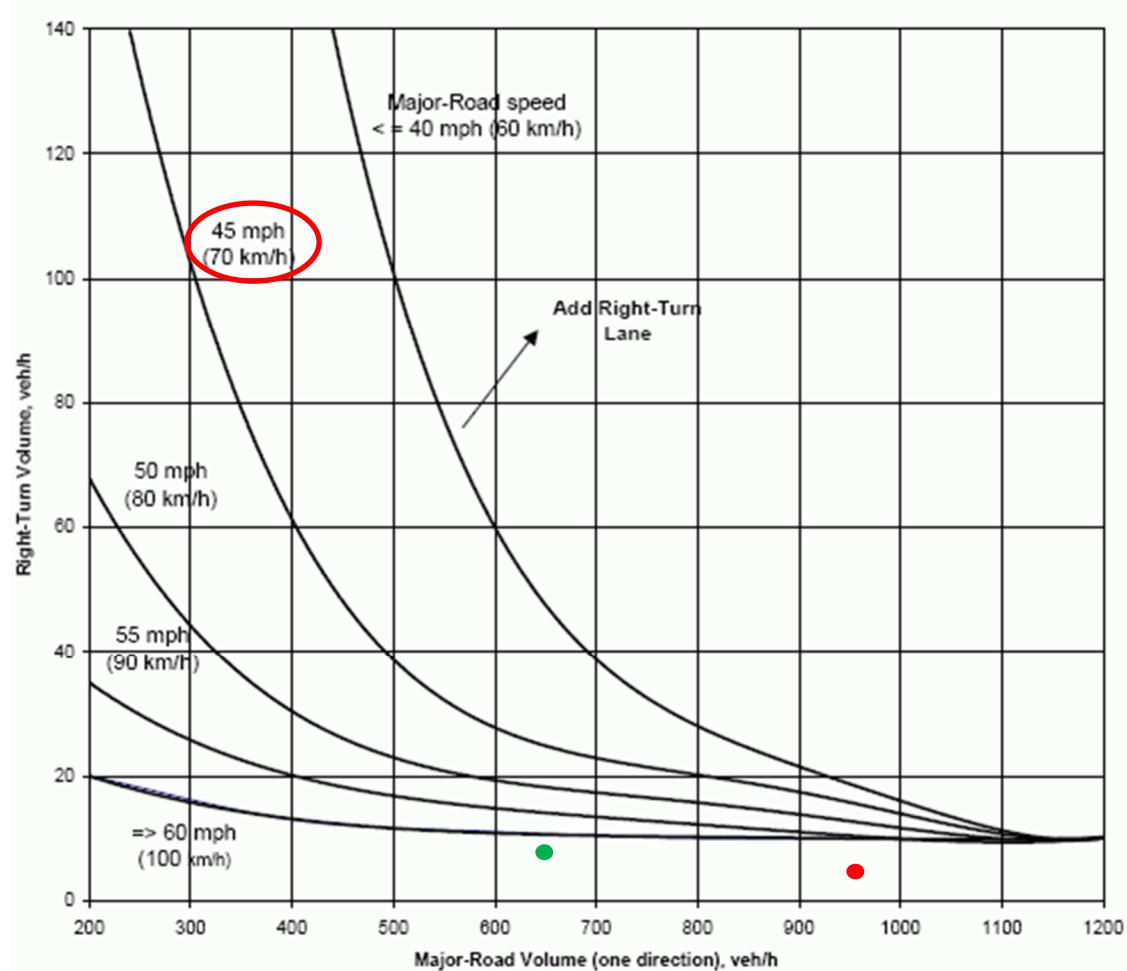

MoDOT Left Turn Lane Guidelines for Two-Lane Roads, 45 mph

1. Opposing Volume (veh/hr) - VO - The opposing volume is to include only the right-turn and through movements in the opposite direction of the left turning vehicle.
2. Advancing Volume (veh/hr) - VA - The advancing volume is to include the right-turn, left-turn and through movements in the same direction as the left turning vehicle.
3. Operating Speed (mph) - The greatest of anticipated operating speed, measured 85th percentile speed or posted speed.
4. Percentage of left turns in VA

Left turn lane is not needed for left turn volume less than 10 vph. However, criteria other than volume, such as crash experience, may be used to justify a left turn lane.

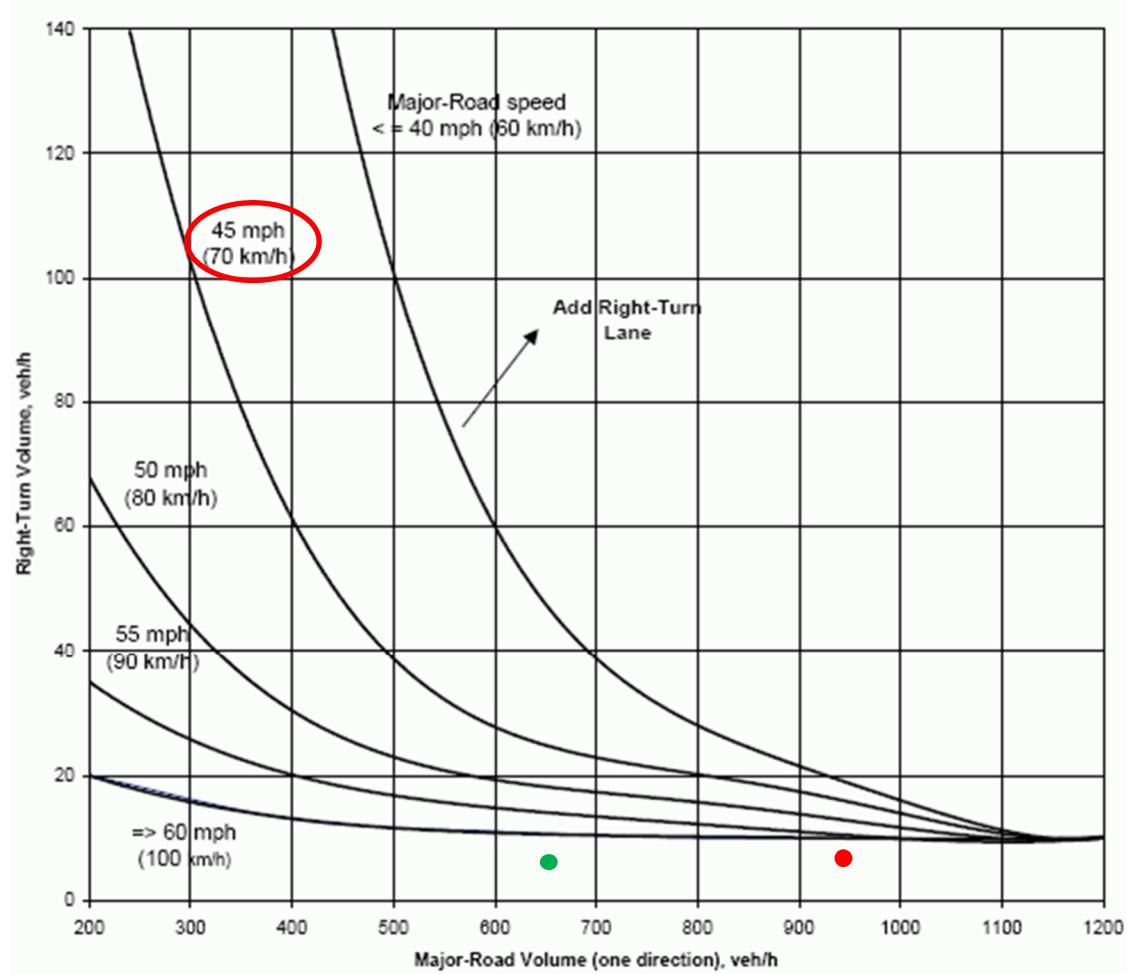

EXISTING PLUS SITE (PHASE I)

Sunset Drive and Highway 150 - **AM & PM** - Doesn't meet warrants

1. Advancing Volume (veh/hr) - The advancing volume is to include the right-turn, left-turn and through movements in the same direction as the right turning vehicle.
2. Right Turning Volume (veh/hr) - The right turning volume is the number of advancing vehicles turning right.
3. Operating Speed (mph) - The greatest of anticipated operating speed, measured 85th percentile speed or posted speed.

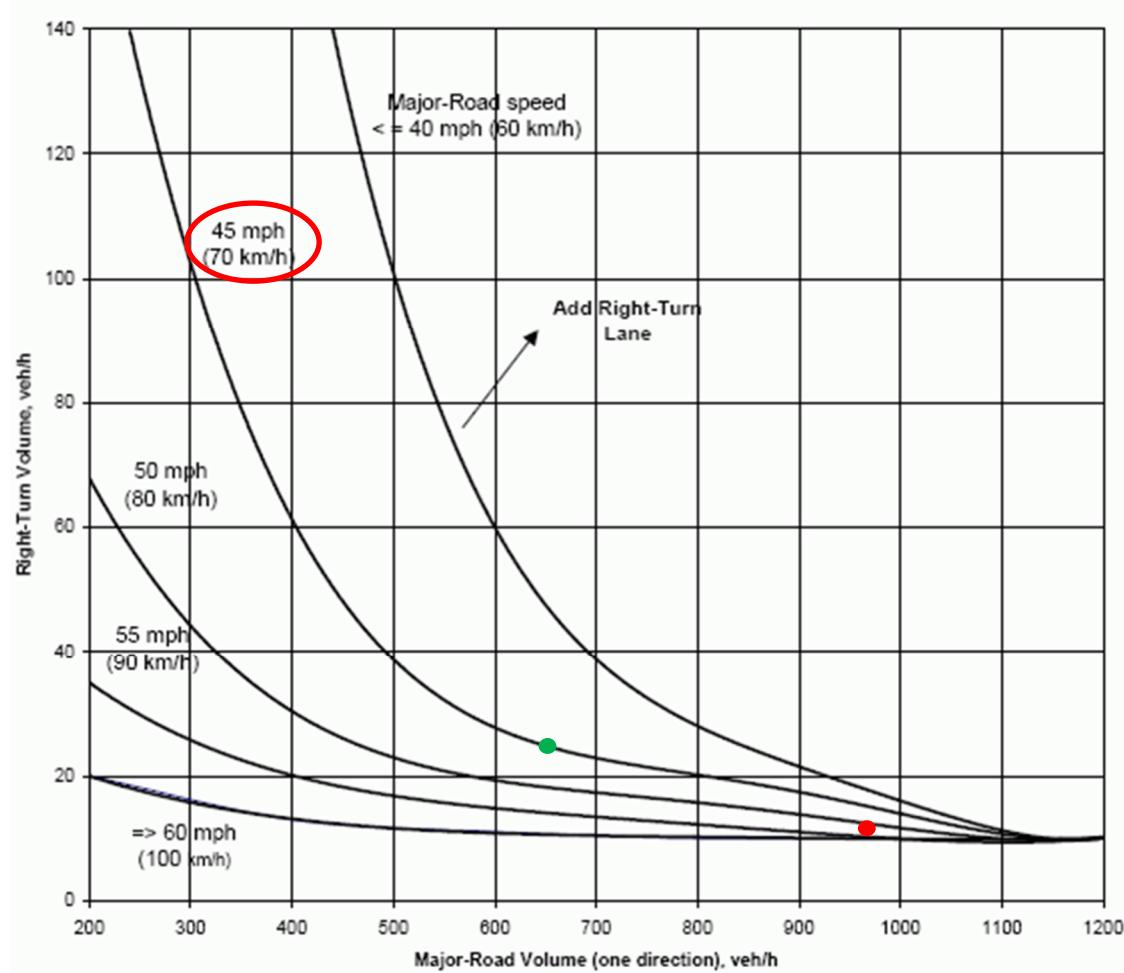

Cobey Creek Dr and Highway 150 – AM & PM – Doesn't meet warrants

1. Advancing Volume (veh/hr) - The advancing volume is to include the right-turn, left-turn and through movements in the same direction as the right turning vehicle.
2. Right Turning Volume (veh/hr) - The right turning volume is the number of advancing vehicles turning right.
3. Operating Speed (mph) - The greatest of anticipated operating speed, measured 85th percentile speed or posted speed.

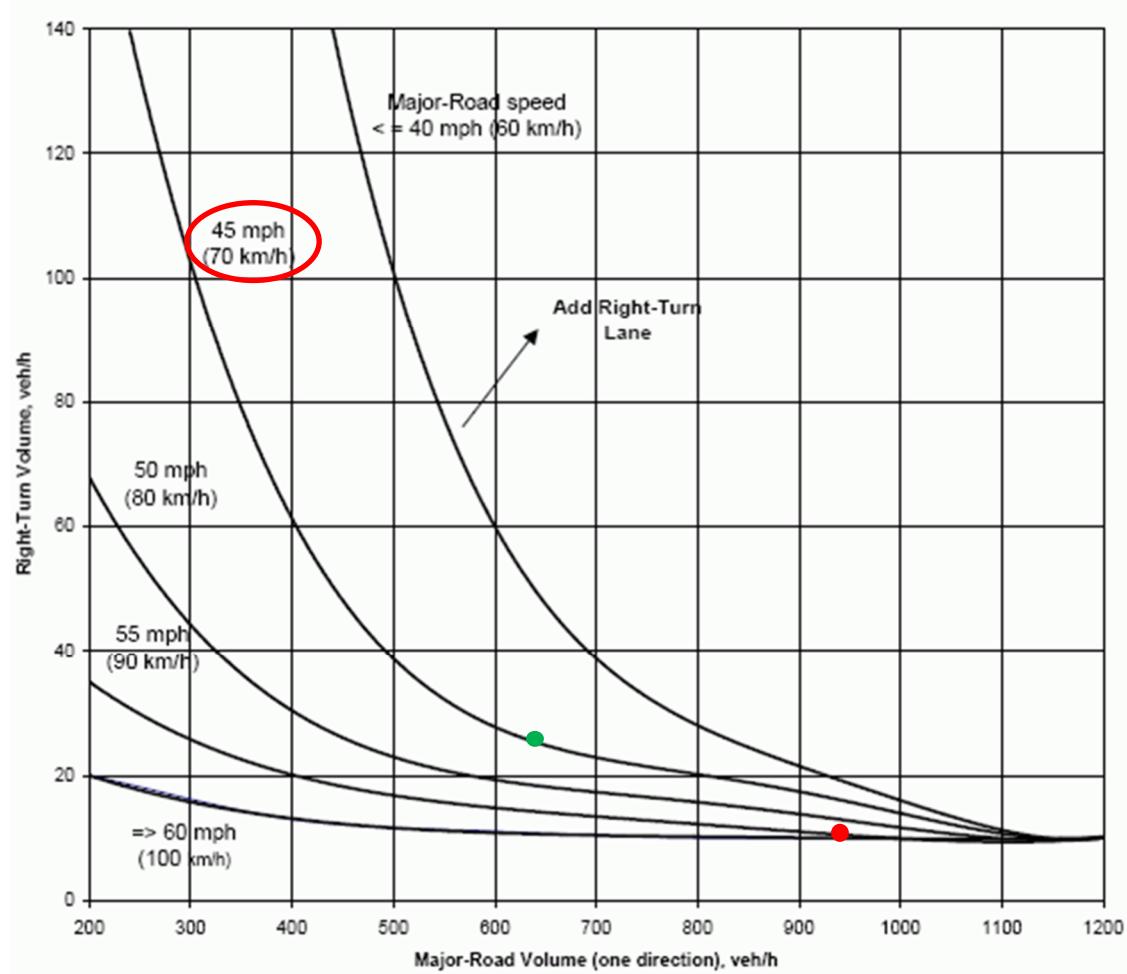

EXISTING PLUS SITE (PHASE I&II)

Sunset Drive and Highway 150 - AM & PM - Meets warrants

1. Advancing Volume (veh/hr) - The advancing volume is to include the right-turn, left-turn and through movements in the same direction as the right turning vehicle.
2. Right Turning Volume (veh/hr) - The right turning volume is the number of advancing vehicles turning right.
3. Operating Speed (mph) - The greatest of anticipated operating speed, measured 85th percentile speed or posted speed.

Cobey Creek Dr and Highway 150 – AM & PM – Meets warrants

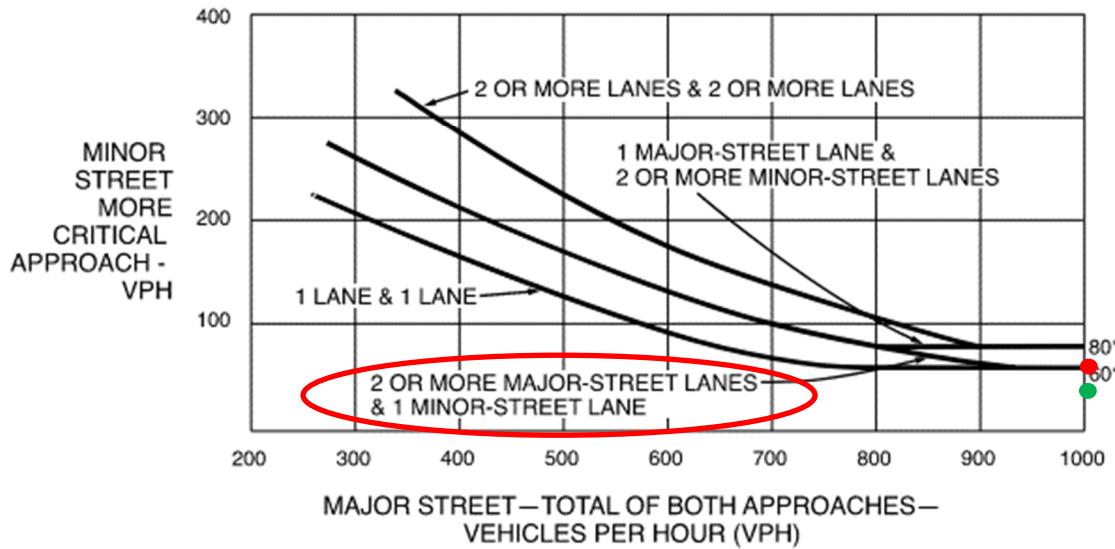

1. Advancing Volume (veh/hr) - The advancing volume is to include the right-turn, left-turn and through movements in the same direction as the right turning vehicle.
2. Right Turning Volume (veh/hr) - The right turning volume is the number of advancing vehicles turning right.
3. Operating Speed (mph) - The greatest of anticipated operating speed, measured 85th percentile speed or posted speed.

EXISTING

Doc Henry and MO 150 – AM & PM – Meets warrants

Figure 4C-2. Warrant 2, Four-Hour Vehicular Volume (70% Factor)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 40 MPH ON MAJOR STREET)

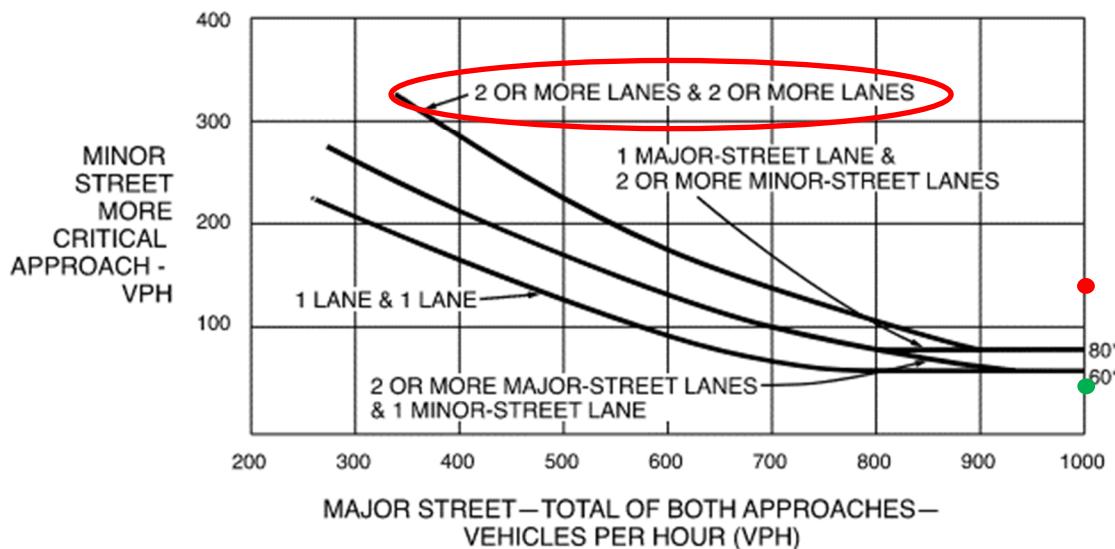

*Note: 80 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 60 vph applies as the lower threshold volume for a minor-street approach with one lane

EXISTING PLUS SITE (PHASE I)

Sunset Road and MO 150 – AM & PM – Meets warrants

Figure 4C-2. Warrant 2, Four-Hour Vehicular Volume (70% Factor)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 40 MPH ON MAJOR STREET)

*Note: 80 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 60 vph applies as the lower threshold volume for a minor-street approach with one lane
